Subject: 2016 Audi A3 e-tron and A3 e-tron ultra FE Label Samples

Hi Dave;

Our IT department and NEPS have finally worked the bugs out of these first VWGoA PHEV fuel economy labels. Please see Monroney label samples for both the Audi A3 e-tron and A3 e-tron ultra carlines. Please let me know if you find anything that needs to be corrected.

Best regards,

Richard

Richard,

You are correct. The 2016 Fiat 500e minicompact (EV) was not in Verify at the time the letter came out. The other values for the minicompact class look correct---the Fiat 500 1.4L M5 is the current leader of the minicompact class at 34 mpg.

Subject: CD-15-27

Hi Dave;

I was looking over the guidance letter dated November 16, and noticed that the "Estimated Fuel Economy Range" for Minicompact Cars is now 15-34 MPG. This class of vehicle last year was 15-116 MPG. This looked a little suspicious to me, so I thought I would mention it and perhaps there was an error in this chart. All the other Carline Class values seem to be within a mile or two of last year's values.

Best regards,

Richard

Subject: WSJ VW story

Nick/Laura,

I wanted to give you a heads up on facts below that may or may not appear in an upcoming WSJ story. Please let me know if you'd like to comment on or dispute any of the below. The timing on this story remains in flux, though it's possible it publishes later in the day today. You may also receive additional emails from me with other items but wanted to get the ball rolling now. Please let me know if you'd like to make anyone from EPA named below available to comment. Some of this isn't totally related to EPA but much of it is. Thanks.

1) Volkswagen didn't support the Obama administration's fuel-economy targets unveiled in 2011 in part because the regulations didn't give diesel models special credit that electric vehicles received.

2) Volkswagen was among the only car makers that didn't send a representative to join President Obama when he unveiled the new fuel-economy targets in July 2011.

3) In October 2014, Ex. 7 a Ex. 7 in Auburn Hills, Mich., held a conference call with California regulators to respond to the results of tests conducted by West Virginia University that showed VW diesel models emitting more on the road than during laboratory tests. The call was for Ex. 7 and others at VW to share the results of VW's own tests. At this time, VW told regulators the discrepancies stemmed from technical issues.

4) In November 2014, Ex. 7 invited four California regulators to an hour-long presentation on fuel-cell vehicles that use hydrogen for fuel during the Los Angeles Auto Show at the Los Angeles convention center. This was in part an attempt to share VW's environmental efforts with regulators, or, put another way, show the company's environmental bona fides.

5) In December 2014, VW recalled nearly a half million diesel models to address emissions discrepancies but regulatory tests the following year showed the recall repairs didn't address the problem.

6) In early August, Ex. 7, previously a senior regulatory affairs official in the Auburn Hills, Mich., office, flew from Germany to Traverse City, Mich., to meet with Ex. 7 Ex. 7 again told Ex. 7 that emissions discrepancies were the result of technical glitches. They also conveyed that later-year model diesel vehicles could be fixed.

7) Around this time, VW officials were insisting to EPA and CARB that the agencies certify 2016 diesel models. VW told them dealers were running out of older models and newer ones were piling up at ports.

8) Regulators later learned that VW had lots of unsold older diesel models.

9) In late August, Ex. 7 told Ex. 7 that VW was using defeat devices on diesel models. Ex. 7 separately made the same admission to the EPA's Christopher Grundler. This was at a transportation conference in Pacific Grove, Calif.

10) VW officials, even after acknowledging the use of defeat devices, still insisted to EPA and CARB that they should certify 2016 diesel models.

11) VW has hired three public relations firms: Hering Schuppener in Germany; Finsbury in the U.K. and Kekst and Co. in the U.S.

12) On Oct. 7, VW revealed in Ex. 7 prepared testimony posted by the House Energy and Commerce Committee Subcommittee on Oversights and Investigations that the company had withdrawn a request for certification of 2016 diesel models because they contained an auxiliary emissions control device that wasn't disclosed to regulators. There isn't evidence that the AECD can game emissions tests. VW has said that the AECD's function is to warm up the engine.

13) The week of Ex. 7 testimony, the EPA expected to receive an explanation from VW of the 2016 2.0L diesel engine AECD's capabilities. It didn't. Calls between EPA and VW were cancelled because VW couldn't make the right people available to EPA.

14) In late October, senior EPA officials, including Ex. 7 expressed frustration to the German Transport Minister about what they viewed as VW's lackluster communications with the agency.

15) A VW spokesman rejects suggestions that communications with EPA are lackluster, saying the company has senior engineers interacting with agency daily.

16) As of late October, VW still hadn't fully explained the AECD on the 2016 2.0L diesel-engine models to EPA.

17) Communications between VW and EPA begun to slightly improve in late October, with knowledgeable VW executives starting to talk to EPA officials.

18) In November, VW stopped previous contrition and disputed new allegations from EPA that additional models with 3.0L diesel engines contained defeat devices.

19) A VW spokesman said the company had no intention of halting sale of the implicated 3.0L diesel models.

20) VW overnight Tuesday and into Wednesday reversed course and halted sales of the implicated 3.0L diesel models and additional diesel models.

21) VW's "Diesel Information" website doesn't yet tell consumers there is a stop-sale order on those other models. It only has information about the 2.0L models.

22) Charles Taylor, a 74-year-old retired athletic director in Brevard, N.C., leased a 2015 Audi TDI Q7 from Harmony Motors of Asheville, N.C. last week. He now wants the dealership to take back the vehicle and make him whole. He is concerned the residual value will suffer as a result of the stop-sale order and feels Audi should have taken the vehicle off the market months ago. He expects to take a loss on the lease and doesn't feel he should.

23) Many experts and other observers fault VW for the way it has responded to the crisis thus far, including for mixed and incomplete messages and tussling with government officials. The response has left regulators, lawmakers, investors and customers around the

world exasperated.

24) The U.S. Justice Department cited GM for cooperating in its investigation of a defective ignition switch linked to more than 100 deaths and noted it conducted a swift and robust internal probe, fired wrongdoers and furnished prosecutors with unvarnished facts, including volunteering documents ordinarily protected by attorney client privilege. Prosecutors also noted a compensation fund that doled out hundreds of millions of dollars to victims.

25) Investors are questioning VW's longstanding corporate governance, which features a board dominated by VW workers and the Porsche and Piech families. The newly appointed board chairman is also VW's finance chief. The extended family of the grandson of VW's founder still controls most decisions.

I know that's a long list but want to ensure you aren't surprised. More as things develop.

Best,

Mike

Subject: Morning Consult Energy, Presented by the American Coalition for Ethanol: EPA Administrator Says Clean Power Plan Repeals Won't Hold; TransCanada Pulls Out of Nebraska Bids

By Asha Glover

We are excited to launch our newest briefing, ***Morning Consult Campaigns****, which will cover the world of politics and elections. Go* ***here*** *to subscribe in one click.*

Today's Washington Brief

- EPA Administrator Gina McCarthy said a recent Senate vote to repeal aspects of the Clean Power Plan will not prevail. She went on to say that efforts to disassemble the plan will not halt the plan's progress. (The Chicago Tribune)

- The Obama administration is against GOP efforts to make changes to the nation's conservation fund. The new reform will create minimum funding for training oil and coal workers, and build an urban parks program. (The Hill)

- Two Republican hearings Wednesday were dedicated to voicing concerns about the upcoming Paris climate talks. Disagreements between U.S. and EU expectations that the talks will produce a legally binding treaty, Senate Republicans pointed out. (The Hill)

Today's Business Brief

- TransCanada withdrew a route-approval application in Nebraska Wednesday in the wake of President Obama's rejection of the Keystone XL pipeline. Despite the corporation's persistence regarding a new project, the company has stepped away from bids in Nebraska. (The Wall Street Journal)

- NextEra Energy Seabrook nuclear power plant is being backed by town officials. The plant is currently in the process of getting approved by the Nuclear Regulatory Commission. (Eagle Tribune)

- Former Massey Energy CEO is facing charges for a deadly mine explosion in 2010. The case has been turned over to a jury by a federal judge. (The Wall Street Journal)

General

EPA Chief Says Senate Vote to Scrap Power-Plant Rules Will Fail
Laura Curtis et al., The Chicago Tribune

One day after the Senate voted to block the Obama administration's plan to throttle greenhouse-gas emissions from power plants, the head of the Environmental Protection Agency predicted the rules would survive all challenges in Congress, the courts and on the presidential campaign trail.

Obama Official Objects to GOP Conservation Bill
Timothy Cama, The Hill

A top federal official said Wednesday that the Obama administration opposes Republican efforts to reform the nation's main conservation fund. The Interior Department's Kristen Sarri objected to the GOP's proposal to mandate that specific amounts from the conservation fund go to particular purposes.

TransCanada Withdraws Nebraska Application for Rejected Keystone XL Pipeline
Chester Dawson, The Wall Street Journal

TransCanada Corp. on Wednesday said it withdrew a route-approval application filed with Nebraska authorities for its proposed Keystone XL pipeline after the Obama administration rejected the project earlier this month. The Calgary-based pipeline operator called the move a “pause” while it considers the next steps for the controversial project, which TransCanada said it remained committed to completing.

Bill to Ban Microbeads in Soap Advances in House
Lydia Wheeler, The Hill

The House Energy and Commerce Committee passed a environmentally conscious bill Wednesday that aims to keep the small plastic beads found in body washes, soaps and other personal care products out of the nation’s lakes and streams. The committee approved an amendment to establish a substitute for the Microbeads Free Waters Act of 2015 to ban microbeads from personal care products and set up an aggressive timeline for the phasing out of these products beginning in 2017.

New Bid From NextEra in Energy Future Bankruptcy
Peg Brickley, The Wall Street Journal

NextEra Energy Inc. on Wednesday offered to buy Energy Future Holdings Corp.’s Oncor transmissions business, which is slated to be sold to an investment group led by Hunt Consolidated. NextEra, a Florida power company, flung down the gauntlet in a filing with the U.S. Bankruptcy Court in Wilmington, Del., which is reviewing Energy Future’s chapter 11 exit plan.

USDA Chief Played Major Backstage Role on Hot-Button Rule
Annie Snider and Kevin Bogardus, E&E

Agriculture Secretary Tom Vilsack was a key player behind the scenes over the past two years as the Obama administration tried to keep its contentious Waters of the U.S. rule afloat in the face of swelling opposition from rural America. Schedules obtained by *Greenwire* under the Freedom of Information Act show that U.S. EPA Administrator Gina McCarthy had frequent meetings and phone calls with her fellow senior administration official between the spring of 2014 and the day the final rule was unveiled this May.

House Panel Approves Bills Undoing Obama Climate Rules
Devin Henry, The Hill

The House Energy and Commerce Committee has approved legislation to block new power plant rules from the Obama administration. The panel passed two resolutions Wednesday from Rep. Ed Whitfield (R-Ky.) to undo the Environmental Protection Agency’s Clean Power Plan limiting emissions from existing power plants and a similar rule for new power stations.

Oil & Natural Gas

U.S. Crude Prices Edge Up On Short Covering, But Oversupply Still Bites
Henning Gloystein, Reuters

U.S. crude oil prices edged up in early trading in Asia on Thursday but are struggling to break away from the $40 per barrel mark as oversupply and high inventory levels ensure an ongoing glut. U.S. West Texas Intermediate (WTI) crude futures CLc1 were trading at $40.88 per barrel at 0031 GMT (1931 ET), up 13 cents from their last settlement.

Oil, Gas Lobby Groups to Merge
Timothy Cama, The Hill

Washington, D.C.'s major oil industry lobbying group is taking over the association representing natural gas drillers, the organizations announced on Wednesday. Taking over the younger America's Natural Gas Alliance (ANGA) will make the American Petroleum Institute (API), one of the top lobbying associations in Washington, an even greater powerhouse.

Dallas Fed CEO says Crude Glut Could Persist Until 2017
Rhiannon Meyers, The Houston Chronicle

The state's economy has remained surprisingly strong despite an energy slump that has forced tens of thousands of Texans out of work in recent months. But the tough times in the oil and gas industry are far from over, the new head of the Federal Reserve Bank of Dallas said Wednesday.

No New Date Set For Utah Oil Lease Sale Delayed By Activists
Timothy Gardner, Reuters

The U.S. government has not set a new date for an oil and natural gas lease auction of federal lands in Utah postponed this week following overwhelming interest from the public, including climate activists, who wanted to attend the event. Officials want to hold the auction as soon as possible but rescheduling the sale is tricky going into the holidays, Megan Crandall, a spokeswoman for the Bureau of Land Management office in Utah, said on Wednesday.

Cheap Gasoline Spurring Record Truck Sales, Hurting Fuel Economy

Joshua Cain, The Houston Chronicle

With gasoline prices at their lowest in years, Americans are buying more trucks and driving more overall. The result, according to Houston-based investment bank Tudor Pickering & Holt, was a slowdown in fuel economy growth last month. So far this year, sales of light trucks have made up a little more than 56 percent of all vehicle sales in the U.S., their biggest share of the market in years, TPH said in a research

note Wednesday.

Wastewater Spills Untracked in Texas, Masking Pollution
Mike Soraghan, E&E

Drilling wastewater spilled from aging oil field pipes in February 2012 in the Hagerman National Wildlife Refuge north of Dallas. The leak killed 84 mature oaks, cottonwoods and hackberry trees, some of them more than 150 years old. U.S. Fish and Wildlife officials estimated the damage at $154,000.

Husky Energy Plans Saskatchewan Heavy-Oil Thermal Project
Carolyn King, The Wall Street Journal

Husky Energy Inc. on Wednesday said it would proceed with another heavy-oil thermal development in Saskatchewan, and announced an investment in its Lima, Ohio, refinery to allow the facility to shift between light and heavy crude oil. The new 10,000-barrel-a-day thermal-oil project, dubbed Rush Lake 2, is one of a number of small-scale, heavy-oil sites in the western Canadian province.

Natural Gas Keeps Falling on Inventory Revision
Timothy Puko, The Wall Street Journal

Natural gas futures retreated for a second-straight session from an adjustment in federal data that show inventories of the fuel are higher than previously reported. Futures for December delivery recently traded down 1.7 cents, or 0.7%, at $2.354/mmBtu on the New York Mercantile Exchange.

Utilities & Infrastructure

The Clean-Energy Revolution Gathers Speed
David Biello, Scientific American

LEDs are just one of the technologies at the forefront of a clean revolution sweeping the U.S. The solid-state light sources have grown from 400,000 installations in 2009 to some 78 million in 2014, according to the DoE's latest analysis of the fastest growing clean-energy technologies—and LEDs are not alone.

The Future of Behavioral Demand Response: Utilities Warm to a Bullish New Market
Robert Walton, Utility Dive

If Navigant's new predictions for growth of behavioral and analytical demand management seem steep, keep in mind that the sector is just getting started. Consumers now react to a wide range of signals through smart phones – they can track packages, pets, their children and the mail – why not energy, too?

Renewables

GE Moves Renewable Energy Headquarters From Schenectady to Paris
Larry Rulison, Times Union

General Electric Co. has officially moved its renewable energy business from Schenectady to Paris following its $10 billion acquisition of the energy business of French conglomerate Alstom SA. GE's renewable enrergy business was located in Schenectady and operated under Anne McEntee until the Alstom deal closed on Nov. 2.

White House Pushes Community Solar Power As Rooftop Alternative
Gregory Korte, USA Today

About half of electric customers can't install solar panels because they don't own their building, don't get enough sun or don't have a large, south-facing roof to install solar panels, according to the U.S. Department of Energy.

MIT' Spinoff's Microbes Turn Beer Waste Into Clean Water, Enegry
Chris Martin, Bloomberg News

Cambrian Innovation is extracting clean water and energy from waste streams at two California breweries with a secret set of microbes.The Boston-based startup has raised $30 million to install its EcoVolt systems, and plans to market them using a model that's similar to the leases that are driving the residential solar market, Chief Executive Officer Matthew Silver said in an interview.

Potomac Residents Decry School System Plan to Install Solar Panels at Former Organic Farm
Aaron Kraut, Bethesda Magazine

Montgomery County Public Schools, which says the roughly 20-acre site is reserved for a future school, is evaluating a proposal from Missouri-based SunEdison and Rockville-based Standard Solar to install an array of ground-mounted solar panels that could produce as much electricity as a standard county high school uses in a year.

Massachusetts House Passes Bill to Lift Solar Net Metering Cap
Shira Schoenberg, Mass Live

The Massachusetts House on Tuesday, over the objections of the solar industry, passed a bill that would increase a cap on the financial incentives given to solar energy projects but would change the amount of the payments.

Coal

Export Subsidies for Coal Power Stations Reined in by OECD
Pilita Clark, Energy

A group of the world's richest countries has agreed to rein in export subsidies for coal power stations in a move likely to make it harder to build many of the plants that help fuel global warming. A group of the world's richest countries has agreed to rein in export subsidies for coal power stations in a move likely to make it harder to build many of the plants that help fuel global warming.

Fate of Former Coal Mining CEO in Hands of Jury
Kris Maher, The Wall Street Journal

The fate of former Massey Energy CEO Don Blankenship, who faces criminal charges in connection with a deadly 2010 coal mine explosion, is now in the hands of a West Virginia jury. Mr. Blankenship, 65 years old, has been charged with three felony counts that carry a maximum of 30 years in prison, in a rare prosecution of a top corporate executive following an industrial accident.

Nuclear

Officials Pledge Full Support For Nuclear Plant
Angeljean Chiaramida, Eagle-Tribune

While some local officials in Massachusetts have written voluminous letters to the Nuclear Regulatory Commission criticizing NextEra Energy Seabrook nuclear power plant and calling for its closure, Seabrook town officials are praising the plant, pledging "unconditional support" for its application to extend its operating license 20 years to 2050. The application is currently before the NRC.

Climate

Politicization of Climate Change Hinders Adaption in Cities
Brittany Patterson, E&E

Published this month in the journal *Global Environmental Change*, the six-city case study looked at the levels and types of climate planning in Portland; Boston; Los Angeles; Tucson, Ariz.; Raleigh, N.C.; and Tampa, Fla. At the bottom of the list fell Tampa. Despite having a high climate risk — with thousands of people below sea level and the increased possibility of being hit by a hurricane — the city of about 350,000 has very little in the way of adaptation plans.

What We Don't Know About the Carbon Cycle Could Hurt You
Gayathri Vaidyanathan, E&E

Over the next decade, the assembled scientists will learn how tropical forests work. Since 2010, boosted by a pro-climate-science president, the Department of Energy, the National Oceanic and Atmospheric Administration, NASA, and other federal agencies have invested hundreds of millions of dollars in earth science.

Paris Climate Summit March in Doubt After Talks Deadlock
Arthur Nelsen and Fiona Harvey, The Guardian

Talks between the French foreign minister, Laurent Fabius, and campaigners over the fate of a huge march before the forthcoming Paris climate summit have ended without agreement. In the wake of attacks in Paris last Friday, the French government proposed scaling down the protest from a march on 29 November – which organizers had hoped would draw hundreds of thousands of people – to a stationary rally.

Billions of People Depend on Water From Shrinking Snowpacks
Sindya N. Bhanoo, The New York Times

Snowpacks are a vital source of water for humans, but they may shrink in some regions as the climate warms. A new study estimates how changes in snowfall will affect water supplies.

2015 Almost Certain to Be Earth's Warmest Year on Record by an Enormous Margin
Jason Samenow, The Washington Post

Barring the unforeseeable, the latest monthly climate report from the National Oceanic and Atmospheric Administration is a clincher. There can no longer be any meaningful doubt that 2015 will be the Earth's warmest year on record, at an entirely different level from the previous warmest years.

Mapping Regions Polluted by Rigged VW Diesels
Andrew C. Revkin, The New York Times

This interactive map, using car registration information and other data, provides Californians with a statewide view of the hidden and illegal air pollution from the 193,000 Volkswagen diesels sold in the state between 2009 and this year with rigged software masking high emissions. The Volkswagens are represented by orange dots.

NASA Chief: Government Climate Scientists Won't Be Intimidated
Eric Berger, Ars Technica

As NOAA has endured a series of Congressional attacks this fall for its climate change research, the agency's administrator, Kathryn Sullivan, has largely remained

silent. But the former astronaut's wingmate for two spaceflights, Charles Bolden, has not been so reticent. The NASA administrator this week continued to blister Congress for its tack on climate change science.

Is Uber Transit's Enemy of Its Friend?
Laura Bliss, City Lab

The Natural Resources Defense Council has announced that it will partner with UC Berkeley's Transportation Sustainability Research Center (TSRC) to analyze the environmental impact of Uber and Lyft nationwide. The central question is whether these services reduce, or add to, the number of car trips taken in major cities.

Polar Bears Are Spending More Time On Land, Where They Can Encounter Humans
Chelsea Harvey, The Washington Post

As their preferred sea ice habitat continues to diminish year after year, thanks to warming temperatures in the region, it seems there's no end to the polar bear's troubles.

A Message from the American Coalition for Ethanol:

The Renewable Fuel Standard is a win-win for the environment and American communities. It spurred the rise of clean fuels that reduce carbon emissions and drive economic development in places that need it the most. By giving entrepreneurs from rural America a seat at the environmental table, the RFS sparks sustainable technologies that create opportunities for everyone. That's why the administration should feel proud to implement the RFS to ensure further innovation. Learn more at ethanol.org.

Opinions, Editorials & Perspectives

EPA Administrator 'Confident' Global Climate Agreement Can Be Reached
Gina McCarthy, Bloomberg News

This month, governments around the world will have an unprecedented opportunity to set our planet on a sustainable course for generations to come. Heading into the Paris talks, I'm confident that an ambitious global climate agreement can and will be reached.

Nuclear, Not Natural Gas, Will Protect Environment
Ted Besmann, The State

The Nuclear Regulatory Commission's decision to grant an operating license to the Tennessee Valley Authority for a new nuclear reactor marks the first such decision in

decades. Within the next decade two new nuclear units in Georgia and two at V.C. Summer here in South Carolina will join Watts Bar.

Hydropower is a Star Among Renewables
Linda Church Ciocci, The Star Tribune

At the national level, hydropower is combating climate change more than any other renewable resource. Thanks to hydropower, the U.S. avoids approximately 200 million metric tons of CO2 annually — the equivalent of taking 42 million cars off the road.

A Message from the American Coalition for Ethanol:

Spurred on by a sense of opportunity in the Renewable Fuel Standard, scientists and engineers at Quad County Corn Processors in Northwest Iowa developed a technology to produce cellulosic biofuel from leftover fiber from corn.

Just like that, one harvest can now produce both conventional and cellulosic biofuel — but with less energy and a better emissions profile.

That makes the RFS a win for the environment and the rural economy. Learn more at ethanol.org.

Research Reports, Issue Briefs & Case Studies

Injection Wells And Earthquakes: Quantifying the Risk

Energy in Depth

According to the U.S. Geological Survey (USGS), approximately 150,000 Class II injection wells are used in connection with oil and natural gas activities across the United States. These include wells for secondary or enhanced recovery (in which wastewater is returned to the reservoir from where it originated to “enhance” the flow of hydrocarbons) as well as disposal wells, where wastewater is disposed in non-producing formations. Roughly 40,000 of these wells are designated for disposal, according to the USGS.

EPA Chief Says Senate Vote to Scrap Power-Plant Rules Will Fail
Laura Curtis et al., The Chicago Tribune

One day after the Senate voted to block the Obama administration's plan to throttle greenhouse-gas emissions from power plants, the head of the Environmental Protection Agency predicted the rules would survive all challenges in Congress, the courts and on the presidential campaign trail.

Obama Official Objects to GOP Conservation Bill
Timothy Cama, The Hill

A top federal official said Wednesday that the Obama administration opposes Republican efforts to reform the nation's main conservation fund. The Interior Department's Kristen Sarri objected to the GOP's proposal to mandate that specific amounts from the conservation fund go to particular purposes.

TransCanada Withdraws Nebraska Application for Rejected Keystone XL Pipeline
Chester Dawson, The Wall Street Journal

TransCanada Corp. on Wednesday said it withdrew a route-approval application filed with Nebraska authorities for its proposed Keystone XL pipeline after the Obama administration rejected the project earlier this month. The Calgary-based pipeline operator called the move a “pause” while it considers the next steps for the controversial project, which TransCanada said it remained committed to completing.

Bill to Ban Microbeads in Soap Advances in House
Lydia Wheeler, The Hill

The House Energy and Commerce Committee passed a environmentally conscious bill Wednesday that aims to keep the small plastic beads found in body washes, soaps and other personal care products out of the nation’s lakes and streams. The committee approved an amendment to establish a substitute for the Microbeads Free Waters Act of 2015 to ban microbeads from personal care products and set up an aggressive timeline for the phasing out of these products beginning in 2017.

New Bid From NextEra in Energy Future Bankruptcy
Peg Brickley, The Wall Street Journal

NextEra Energy Inc. on Wednesday offered to buy Energy Future Holdings Corp.’s Oncor transmissions business, which is slated to be sold to an investment group led by Hunt Consolidated. NextEra, a Florida power company, flung down the gauntlet in a filing with the U.S. Bankruptcy Court in Wilmington, Del., which is reviewing Energy Future’s chapter 11 exit plan.

USDA Chief Played Major Backstage Role on Hot-Button Rule
Annie Snider and Kevin Bogardus, E&E

Agriculture Secretary Tom Vilsack was a key player behind the scenes over the past two years as the Obama administration tried to keep its contentious Waters of the U.S. rule afloat in the face of swelling opposition from rural America. Schedules obtained by *Greenwire* under the Freedom of Information Act show that U.S. EPA Administrator Gina McCarthy had frequent meetings and phone calls with her fellow senior administration official between the spring of 2014 and the day the final rule was unveiled this May.

House Panel Approves Bills Undoing Obama Climate Rules
Devin Henry, The Hill

The House Energy and Commerce Committee has approved legislation to block new power plant rules from the Obama administration. The panel passed two resolutions Wednesday from Rep. Ed Whitfield (R-Ky.) to undo the Environmental Protection Agency’s Clean Power Plan limiting emissions from existing power plants and a similar rule for new power stations.

Oil & Natural Gas

U.S. Crude Prices Edge Up On Short Covering, But Oversupply Still Bites
Henning Gloystein, Reuters

U.S. crude oil prices edged up in early trading in Asia on Thursday but are struggling to break away from the $40 per barrel mark as oversupply and high inventory levels ensure an ongoing glut. U.S. West Texas Intermediate (WTI) crude futures CLc1 were trading at $40.88 per barrel at 0031 GMT (1931 ET), up 13 cents from their last settlement.

Oil, Gas Lobby Groups to Merge
Timothy Cama, The Hill

Washington, D.C.'s major oil industry lobbying group is taking over the association representing natural gas drillers, the organizations announced on Wednesday. Taking over the younger America's Natural Gas Alliance (ANGA) will make the American Petroleum Institute (API), one of the top lobbying associations in Washington, an even greater powerhouse.

Dallas Fed CEO says Crude Glut Could Persist Until 2017
Rhiannon Meyers, The Houston Chronicle

The state's economy has remained surprisingly strong despite an energy slump that has forced tens of thousands of Texans out of work in recent months. But the tough times in the oil and gas industry are far from over, the new head of the Federal Reserve Bank of Dallas said Wednesday.

No New Date Set For Utah Oil Lease Sale Delayed By Activists
Timothy Gardner, Reuters

The U.S. government has not set a new date for an oil and natural gas lease auction of federal lands in Utah postponed this week following overwhelming interest from the public, including climate activists, who wanted to attend the event. Officials want to hold the auction as soon as possible but rescheduling the sale is tricky going into the holidays, Megan Crandall, a spokeswoman for the Bureau of Land Management office in Utah, said on Wednesday.

Cheap Gasoline Spurring Record Truck Sales, Hurting Fuel Economy

Joshua Cain, The Houston Chronicle

With gasoline prices at their lowest in years, Americans are buying more trucks and driving more overall. The result, according to Houston-based investment bank Tudor Pickering & Holt, was a slowdown in fuel economy growth last month. So far this year, sales of light trucks have made up a little more than 56 percent of all vehicle sales in the U.S., their biggest share of the market in years, TPH said in a research

note Wednesday.

Wastewater Spills Untracked in Texas, Masking Pollution
Mike Soraghan, E&E

Drilling wastewater spilled from aging oil field pipes in February 2012 in the Hagerman National Wildlife Refuge north of Dallas. The leak killed 84 mature oaks, cottonwoods and hackberry trees, some of them more than 150 years old. U.S. Fish and Wildlife officials estimated the damage at $154,000.

Husky Energy Plans Saskatchewan Heavy-Oil Thermal Project
Carolyn King, The Wall Street Journal

Husky Energy Inc. on Wednesday said it would proceed with another heavy-oil thermal development in Saskatchewan, and announced an investment in its Lima, Ohio, refinery to allow the facility to shift between light and heavy crude oil. The new 10,000-barrel-a-day thermal-oil project, dubbed Rush Lake 2, is one of a number of small-scale, heavy-oil sites in the western Canadian province.

Natural Gas Keeps Falling on Inventory Revision
Timothy Puko, The Wall Street Journal

Natural gas futures retreated for a second-straight session from an adjustment in federal data that show inventories of the fuel are higher than previously reported. Futures for December delivery recently traded down 1.7 cents, or 0.7%, at $2.354/mmBtu on the New York Mercantile Exchange.

Utilities & Infrastructure

The Clean-Energy Revolution Gathers Speed
David Biello, Scientific American

LEDs are just one of the technologies at the forefront of a clean revolution sweeping the U.S. The solid-state light sources have grown from 400,000 installations in 2009 to some 78 million in 2014, according to the DoE's latest analysis of the fastest growing clean-energy technologies—and LEDs are not alone.

The Future of Behavioral Demand Response: Utilities Warm to a Bullish New Market
Robert Walton, Utility Dive

If Navigant's new predictions for growth of behavioral and analytical demand management seem steep, keep in mind that the sector is just getting started. Consumers now react to a wide range of signals through smart phones – they can track packages, pets, their children and the mail – why not energy, too?

Renewables

GE Moves Renewable Energy Headquarters From Schenectady to Paris
Larry Rulison, Times Union

General Electric Co. has officially moved its renewable energy business from Schenectady to Paris following its $10 billion acquisition of the energy business of French conglomerate Alstom SA. GE's renewable enrergy business was located in Schenectady and operated under Anne McEntee until the Alstom deal closed on Nov. 2.

White House Pushes Community Solar Power As Rooftop Alternative
Gregory Korte, USA Today

About half of electric customers can't install solar panels because they don't own their building, don't get enough sun or don't have a large, south-facing roof to install solar panels, according to the U.S. Department of Energy.

MIT' Spinoff's Microbes Turn Beer Waste Into Clean Water, Enegry
Chris Martin, Bloomberg News

Cambrian Innovation is extracting clean water and energy from waste streams at two California breweries with a secret set of microbes.The Boston-based startup has raised $30 million to install its EcoVolt systems, and plans to market them using a model that's similar to the leases that are driving the residential solar market, Chief Executive Officer Matthew Silver said in an interview.

Potomac Residents Decry School System Plan to Install Solar Panels at Former Organic Farm
Aaron Kraut, Bethesda Magazine

Montgomery County Public Schools, which says the roughly 20-acre site is reserved for a future school, is evaluating a proposal from Missouri-based SunEdison and Rockville-based Standard Solar to install an array of ground-mounted solar panels that could produce as much electricity as a standard county high school uses in a year.

Massachusetts House Passes Bill to Lift Solar Net Metering Cap
Shira Schoenberg, Mass Live

The Massachusetts House on Tuesday, over the objections of the solar industry, passed a bill that would increase a cap on the financial incentives given to solar energy projects but would change the amount of the payments.

Coal

Export Subsidies for Coal Power Stations Reined in by OECD
Pilita Clark, Energy

A group of the world's richest countries has agreed to rein in export subsidies for coal power stations in a move likely to make it harder to build many of the plants that help fuel global warming. A group of the world's richest countries has agreed to rein in export subsidies for coal power stations in a move likely to make it harder to build many of the plants that help fuel global warming.

Fate of Former Coal Mining CEO in Hands of Jury
Kris Maher, The Wall Street Journal

The fate of former Massey Energy CEO Don Blankenship, who faces criminal charges in connection with a deadly 2010 coal mine explosion, is now in the hands of a West Virginia jury. Mr. Blankenship, 65 years old, has been charged with three felony counts that carry a maximum of 30 years in prison, in a rare prosecution of a top corporate executive following an industrial accident.

Nuclear

Officials Pledge Full Support For Nuclear Plant
Angeljean Chiaramida, Eagle-Tribune

While some local officials in Massachusetts have written voluminous letters to the Nuclear Regulatory Commission criticizing NextEra Energy Seabrook nuclear power plant and calling for its closure, Seabrook town officials are praising the plant, pledging "unconditional support" for its application to extend its operating license 20 years to 2050. The application is currently before the NRC.

Climate

Politicization of Climate Change Hinders Adaption in Cities
Brittany Patterson, E&E

Published this month in the journal *Global Environmental Change*, the six-city case study looked at the levels and types of climate planning in Portland; Boston; Los Angeles; Tucson, Ariz.; Raleigh, N.C.; and Tampa, Fla. At the bottom of the list fell Tampa. Despite having a high climate risk — with thousands of people below sea level and the increased possibility of being hit by a hurricane — the city of about 350,000 has very little in the way of adaptation plans.

What We Don't Know About the Carbon Cycle Could Hurt You
Gayathri Vaidyanathan, E&E

Over the next decade, the assembled scientists will learn how tropical forests work. Since 2010, boosted by a pro-climate-science president, the Department of Energy, the National Oceanic and Atmospheric Administration, NASA, and other federal agencies have invested hundreds of millions of dollars in earth science.

Paris Climate Summit March in Doubt After Talks Deadlock
Arthur Nelsen and Fiona Harvey, The Guardian

Talks between the French foreign minister, Laurent Fabius, and campaigners over the fate of a huge march before the forthcoming Paris climate summit have ended without agreement. In the wake of attacks in Paris last Friday, the French government proposed scaling down the protest from a march on 29 November – which organizers had hoped would draw hundreds of thousands of people – to a stationary rally.

Billions of People Depend on Water From Shrinking Snowpacks
Sindya N. Bhanoo, The New York Times

Snowpacks are a vital source of water for humans, but they may shrink in some regions as the climate warms. A new study estimates how changes in snowfall will affect water supplies.

2015 Almost Certain to Be Earth's Warmest Year on Record by an Enormous Margin
Jason Samenow, The Washington Post

Barring the unforeseeable, the latest monthly climate report from the National Oceanic and Atmospheric Administration is a clincher. There can no longer be any meaningful doubt that 2015 will be the Earth's warmest year on record, at an entirely different level from the previous warmest years.

Mapping Regions Polluted by Rigged VW Diesels
Andrew C. Revkin, The New York Times

This interactive map, using car registration information and other data, provides Californians with a statewide view of the hidden and illegal air pollution from the 193,000 Volkswagen diesels sold in the state between 2009 and this year with rigged software masking high emissions. The Volkswagens are represented by orange dots.

NASA Chief: Government Climate Scientists Won't Be Intimidated
Eric Berger, Ars Technica

As NOAA has endured a series of Congressional attacks this fall for its climate change research, the agency's administrator, Kathryn Sullivan, has largely remained

silent. But the former astronaut's wingmate for two spaceflights, Charles Bolden, has not been so reticent. The NASA administrator this week continued to blister Congress for its tack on climate change science.

Is Uber Transit's Enemy of Its Friend?
Laura Bliss, City Lab

The Natural Resources Defense Council has announced that it will partner with UC Berkeley's Transportation Sustainability Research Center (TSRC) to analyze the environmental impact of Uber and Lyft nationwide. The central question is whether these services reduce, or add to, the number of car trips taken in major cities.

Polar Bears Are Spending More Time On Land, Where They Can Encounter Humans
Chelsea Harvey, The Washington Post

As their preferred sea ice habitat continues to diminish year after year, thanks to warming temperatures in the region, it seems there's no end to the polar bear's troubles.

A Message from the American Coalition for Ethanol:

The Renewable Fuel Standard is a win-win for the environment and American communities. It spurred the rise of clean fuels that reduce carbon emissions and drive economic development in places that need it the most. By giving entrepreneurs from rural America a seat at the environmental table, the RFS sparks sustainable technologies that create opportunities for everyone. That's why the administration should feel proud to implement the RFS to ensure further innovation. Learn more at ethanol.org.

Opinions, Editorials & Perspectives

EPA Administrator 'Confident' Global Climate Agreement Can Be Reached
Gina McCarthy, Bloomberg News

This month, governments around the world will have an unprecedented opportunity to set our planet on a sustainable course for generations to come. Heading into the Paris talks, I'm confident that an ambitious global climate agreement can and will be reached.

Nuclear, Not Natural Gas, Will Protect Environment
Ted Besmann, The State

The Nuclear Regulatory Commission's decision to grant an operating license to the Tennessee Valley Authority for a new nuclear reactor marks the first such decision in

decades. Within the next decade two new nuclear units in Georgia and two at V.C. Summer here in South Carolina will join Watts Bar.

Hydropower is a Star Among Renewables
Linda Church Ciocci, The Star Tribune

At the national level, hydropower is combating climate change more than any other renewable resource. Thanks to hydropower, the U.S. avoids approximately 200 million metric tons of CO2 annually — the equivalent of taking 42 million cars off the road.

A Message from the American Coalition for Ethanol:

Spurred on by a sense of opportunity in the Renewable Fuel Standard, scientists and engineers at Quad County Corn Processors in Northwest Iowa developed a technology to produce cellulosic biofuel from leftover fiber from corn.

Just like that, one harvest can now produce both conventional and cellulosic biofuel — but with less energy and a better emissions profile.

That makes the RFS a win for the environment and the rural economy. Learn more at ethanol.org.

Research Reports, Issue Briefs & Case Studies

Injection Wells And Earthquakes: Quantifying the Risk

Energy in Depth

According to the U.S. Geological Survey (USGS), approximately 150,000 Class II injection wells are used in connection with oil and natural gas activities across the United States. These include wells for secondary or enhanced recovery (in which wastewater is returned to the reservoir from where it originated to “enhance” the flow of hydrocarbons) as well as disposal wells, where wastewater is disposed in non-producing formations. Roughly 40,000 of these wells are designated for disposal, according to the USGS.

seeking to undo the rule entirely and a new House bill aiming to "harmonize" deadlines for states' compliance plans for the new standard.

Greenwire

CLEAN POWER PLAN:

Republicans send CRA bids to kill climate rule to House floor

Amanda Reilly, E&E reporter

Published: Wednesday, November 18, 2015

The House Energy and Commerce Committee today sent two resolutions to the floor that would block the Obama administration's carbon rules for power plants.

The panel voted to approve both joint resolutions by a vote of 28-21. No Democrats voted in favor of the resolutions, and no Republicans voted in opposition.

Energy and Commerce Subcommittee on Energy and Power Chairman Ed Whitfield (R-Ky.) introduced both resolutions targeting the climate rules under the rarely used Congressional Review Act, which gives Congress a means of striking down administrative rules in an expedited manner.

H.J. Res. 71 would block U.S. EPA's rule restricting carbon dioxide emissions from new power plants, while H.J. Res. 72 would kill the Clean Power Plan to address emissions from existing power plants.

"I think Congress has the responsibility to raise issues when they think the president and administration is exceeding their authority," Whitfield said today.

The vote to send the resolutions to the House comes a day after the full Senate approved both resolutions by a vote of 52-46 mostly along party lines (*E&E Daily*, Nov. 18).

The White House yesterday said President Obama would veto both resolutions because they would "undermine the public health protections of the Clean Air Act (CAA) and stop critical U.S. efforts to reduce dangerous carbon pollution from power plants." The vote in the Senate yesterday signals that backers of the resolutions do not have enough votes to override a veto.

But opponents of EPA's power plant rules are hoping the votes will send a message to the international community ahead of climate change negotiations that kick off Nov. 30 in Paris that Congress is not behind Obama's agenda.

The Senate Environment and Public Works Committee and House Science, Space and Technology Committee today separately held hearings questioning the upcoming international climate talks and the U.S. role (*see related story*).

"Congress is sending a clear message to countries around the world that there is significant opposition to President Obama's unlawful carbon regulations," Thomas Pyle, president of the American Energy Alliance, said today. "World leaders who are banking on the U.S., and our resources, being a part of a global agreement should take note of this opposition."

The full House, however, will not take up the CRA resolutions until after the Thanksgiving recess once the Paris talks have already commenced, Whitfield said yesterday (*E&E Daily*, Nov. 18).

Democrats on the Energy and Commerce Committee today slammed the resolutions as wasting committee time and being indicative of Republicans' unwillingness to address climate change.

"These two proposals to nullify a Clean Power Plan are not only misguided," Rep. Anna Eshoo (D-Calif.) said, "I think that they stand as one bookend that represents the past and nothing about our collective future, the protection of our people, the recognition of science."

CLIMATE:

Republicans vow 'no money' for Paris deal

Jean Chemnick and Daniel Bush, E&E reporters

Published: Wednesday, November 18, 2015

Republicans made a play today to seize control of the U.S. role in upcoming United Nations climate talks in Paris, warning in two Capitol Hill hearings and in a letter to President Obama that Congress would exercise the "power of the purse" to stop the administration from making good on its pledges of international climate aid.

Sen. John Barrasso (R-Wyo.) previewed the new Republican position in a letter released today and in his statement at a Senate Environment and Public Works Committee hearing.

"Without Senate approval, there will be no money. Period," he said at the hearing.

Barrasso and EPW Chairman James Inhofe (R-Okla.) released a letter warning that Congress would withhold funds if the administration does not submit an agreement for Senate advice and consent. The administration has said it expects the deal brokered later this month in the French capital to include emissions pledges that would be politically rather than legally binding, precluding the need for formal Senate approval. The agreement could include both emissions reduction and climate financing elements.

Republicans have been hunting for a way to carve out a role for Congress in the negotiations, and today's Barrasso-Inhofe letter appears to be their solution.

The senators noted that Obama "unilaterally" pledged last year the United States would provide $3 billion over four years to the United Nations' Green Climate Fund. But they reminded Obama that would require congressional cooperation.

"We pledge that Congress will not allow U.S. taxpayer dollars to go to the Green Climate Fund until the forthcoming international climate agreement is submitted to the Senate for its constitutional advice and consent," they said.

The two asked Obama to direct U.S. Special Envoy for Climate Change Todd Stern to give foreign delegations "a full picture" at the talks of the division of power between the executive and legislative branches of the U.S. government.

"He must explain that Congress will not be forthcoming with funds in the future without a vote in the Senate on any final agreement as required in the U.S. Constitution," Barrasso and Inhofe wrote.

Barrasso, who chairs a key Foreign Relations subcommittee, and Inhofe have been generally critical of Obama's ambition to help forge an international climate agreement, arguing that it's primarily a scheme to transfer wealth from the U.S. Treasury to developing countries that will do little to limit their own greenhouse gas emissions.

They also complain that the administration routinely circumvents Congress on environmental issues, as when U.S. EPA promulgated power plant carbon rules after Congress did not enact carbon legislation. The Senate voted narrowly last night to scuttle the two marquee rules (*E&E Daily*, Nov. 18).

The administration argues that the U.N. negotiations are on track to produce an agreement that would legally obligate the U.S. only to submit pledges and adhere to a review process. The substance of national commitments would be only politically binding -- and in the case of the U.S., it relies on domestic laws that have already been enacted, including the Clean Air Act.

But Sen. Shelley Moore Capito (R-W.Va.), who sponsored the resolution to kill the Clean Power Plan, said at the top of the hearing that last night's Congressional Review Act votes show how vulnerable the Obama administration's domestic climate policy is.

The EPW Clean Air and Nuclear Safety Subcommittee chairwoman presided over the hearing while Inhofe sat on the House-Senate conference committee for transportation funding legislation. She noted that neither the House nor the Senate version of the fiscal 2016 appropriations bill for the State Department includes a dime for the Green Climate Fund (GCF) -- meaning the Obama administration will effectively go to Paris empty-handed, she said. That is unlikely to change when the 12 spending bills are combined ahead of a Dec. 11 deadline to fund the federal government, she said.

"I don't see a scenario where this Senate is going to approve in the omnibus bill any language that would open any door for any Green Climate Fund," she said, adding that her assertion would be true even if the administration reversed course and submitted the deal to Senate advice and consent.

Republican-invited witnesses testified at the EPW hearing that the $3 billion Obama has pledged to the GCF would only be a beginning. Oren Cass of the conservative Manhattan Institute for Policy Research urged congressional Republicans to move a resolution or other vote before the talks conclude making it clear that Congress would not provide the funds.

And Stephen Eule of the U.S. Chamber of Commerce proposed that the U.S. share of international climate aid could rise to $45 billion. The developed world has promised poor countries a collective $100 billion in public and private funds a year by 2020. Eule proposed the figure in response to a question by Sen. Jeff Sessions (R-Ala.) and said later that it relied on the senator's assumptions for how responsibility for the $100 billion would eventually be allocated.

The GCF, which seeks to provide $10 billion by 2020 to help poor countries cope with warming and reduce their emissions, is funded by public money. But the vast majority of the $100 billion commitment is expected to come from leveraged private investment.

There is disagreement about whether Congress must explicitly provide the $500 million the administration seeks in fiscal 2016 for the GCF, or whether the State and Treasury departments can provide some or all of that money by shifting it from other funds. The Senate Appropriations Committee passed a bipartisan amendment in July stripping language from the State Department spending bill that would have explicitly barred the administration from spending any money on the U.N. fund.

House hearing

House Republicans also slammed the Clean Power Plan today and criticized the Obama administration

for seeking an international agreement in Paris that faces deep opposition in the GOP-controlled Congress.

"The so-called Clean Power Plan will cost billions of dollars, cause financial hardship for American families and diminish the competitiveness of American industry around the world," Science, Space and Technology Chairman Lamar Smith (R-Texas) said at a hearing.

A vocal critic of EPA and the finalized carbon rule, Smith added that an international climate deal in Paris would give "control of U.S. energy policy to unelected United Nations officials."

"The president should come back to Congress with any agreement that is made in Paris on carbon emissions. He won't, because he knows the Senate will not ratify it," Smith said.

Other GOP lawmakers on the committee downplayed the Paris talks as well, arguing that an agreement would hurt the U.S. economy and developing countries that rely on coal-fired power generation.

"The world is hungry for energy, and whether we like or not, coal is going to fill that gap. Nothing that happens in Paris is going to change that," said Rep. Bill Posey (R-Fla.).

Democrats defended the carbon rule and the White House's efforts to broker a climate deal in Paris.

"The cost of inaction [on] climate change far outweighs the costs of action," Rep. Donna Edwards (D-Md.) said. "If we don't do something now, we're in big trouble."

Katie Dykes, deputy commissioner of the Connecticut Department of Energy and Environmental Protection, testified that the final carbon rule signaled the United States' commitment to taking action on climate change.

"It's so critical that the Obama administration is putting our nation on track to reduce carbon emissions from our largest source sector ahead of the Paris negotiations," Dykes told the panel.

RENEWABLES:

House Dems float 2-year extension of wind credit

Geof Koss, E&E reporter

Published: Wednesday, November 18, 2015

House Democrats have introduced a bill to extend the expired renewable production tax credit for one year while expanding the qualification requirements for a separate key incentive for solar and other renewables.

Rep. Earl Blumenauer (D-Ore.) yesterday introduced H.R. 4040, the "Bridge to a Clean Energy Future Act of 2015," which would extend the PTC and an assortment of other breaks for two years.

"With the impacts of climate change already upon us, now more than ever our focus should be on helping clean energy industries grow and thrive," said Blumenauer, a member of the Ways and Means Committee, in a statement. "At the federal and state level -- including in Oregon -- we've already made notable investments in renewable energy resources, and this legislation will expand these efforts."

Also included in the measure are extensions of credits for alternative fuel vehicles and properties, biodiesel and cellulosic ethanol, and efficiency improvements, according to a summary.

The expired credits track with those that were extended for two years under a broad extenders package approved by the Senate Finance Committee earlier this year (*E&ENews PM*, July 21).

However, the clean energy breaks were left out of an extenders bill approved by the House Ways and Means Committee in September, raising questions over how the lower chamber will respond to the annual tussle over extending the PTC (*E&ENews PM*, Sept. 17).

Blumenauer's bill additionally would modify several existing tax provisions to boost their usefulness for clean energy sources.

Significantly, it would base the applicability of the investment tax credit (ITC) on the start of construction, rather than the current "placed-in-service" requirement, which means the credit starts when power is generated. The PTC has already been adjusted to a start-construction requirement.

Sen. Dean Heller (R-Nev.), a member of the Finance Committee, is pushing for the change to be included in the upper chamber's extender package. He floated the plan during the July extenders markup but withdrew it because the ITC doesn't expire until the end of next year.

The House measure, which has 18 co-sponsors, is paid for by cancelling "outdated and wasteful tax breaks" for the oil and gas industry, according to Blumenauer's statement. Republicans have long resisted the Obama administration's calls to cancel the breaks.

The legislation comes as business interests are stepping up efforts to see the expired tax extenders reinstated before the end of the year, with an omnibus appropriations bill considered the likely vehicle.

Still, any extension of the PTC will face headwinds in the House, where critics of the incentive have focused their efforts to keep it lapsed.

TRANSPORTATION:

26 Senate Dems urge more funding, shorter reauthorization

Ariel Wittenberg, E&E reporter

Published: Wednesday, November 18, 2015

A group of almost 30 Senate Democrats sent a letter to congressional negotiators today urging them to increase surface transportation funding levels over a shorter authorization period.

Spearheaded by Sens. Tom Carper of Delaware and Cory Booker of New Jersey, the letter was sent as conferees working to hammer out differences between House and Senate legislation met for the first time this morning.

"We urge you to consider the urgent need for an increase in infrastructure investment around the country, and report a final proposal that can best address these needs by maximizing annual investment levels for all surface transportation programs over a shorter authorization period," the letter says. "We strongly urge you to finalize a surface transportation conference report that can provide the maximum amount of benefits to American families and businesses by prioritizing increased investment for all surface transportation programs over the length of the authorization."

Determining how to finance the $325 billion road and public transit package has been a major point of contention as the bills moved through Congress, and remains the main sticking point for the conference committee (*E&E Daily*, Nov. 5).

Currently, the Senate bill authorizes funding for six years but provides enough money only to pay for the first three. The House was able to cover five years of the bill's cost thanks to an amendment by Rep. Randy Neugebauer (R-Texas) that would help finance the bill by reducing dividends that the Federal Reserve pays to some large member banks (*Greenwire*, Nov. 5).

That fix has some members of the conference committee considering authorizing a fully funded five-year authorization package.

The letter from Senate Democrats not on the conference committee notes that prior to the 2012 Moving Ahead for Progress in the 21st Century Act (MAP-21), "each successive transportation package contained significant increases in annual funding levels."

"While the proposed Senate investment levels exceed baseline funding, they would still only be sufficient to cover expected increases in construction materials costs," the letter says. "These funding levels are certainly insufficient to rebuild and modernize our nation's transportation infrastructure."

Additional conferees

Neugebauer was among 16 last-minute additions to the House delegation to the conference committee.

House Speaker Paul Ryan (R-Wis.) assigned the additional legislators last night, saying they would help deliver "a final highway bill that cuts waste, prioritizes infrastructure, and helps create good-paying jobs across the country."

The additional members are: Reps. Mac Thornberry (R-Texas), Mike Rogers (R-Ala.), Fred Upton (R-Mich.), Markwayne Mullin (R-Okla.), Jeb Hensarling (R-Texas), Bob Goodlatte (R-Va.), Tom Marino (R-Pa.), Darin LaHood (R-Ill.), Glenn Thompson (R-Pa.), Will Hurd (R-Texas), John Mica (R-Fla.), Lamar Smith (R-Texas), Barbara Comstock (R-Va.), Kevin Brady (R-Texas) and Dave Reichert (R-Wash.).

Mica is a former chairman of the Transportation and Infrastructure Committee. LaHood's father, Ray LaHood, served as President Obama's first Transportation secretary.

The Senate appointed 11 conferees, and the House appointed 30 earlier this month (*E&E Daily*, Nov. 16).

CLIMATE:

Collins, Cantwell ask GAO to assess warming's impacts

Amanda Reilly, E&E reporter

Published: Wednesday, November 18, 2015

Two senators asked the Government Accountability Office to embark on a study of the costs and risks of climate change to the federal government.

In a letter to the U.S. comptroller general, Sens. Susan Collins (R-Maine) and Maria Cantwell (D-Wash.)

asked GAO to recommend the best policies for offsetting costs associated with climate change to the federal government.

"Understanding the risks and costs associated with climate change over time," the senators wrote, "and the implications of policy actions to reduce those risks and costs is essential to planning for and evaluating near-term federal investments and policy decisions."

The letter comes a day after the Senate voted to pass resolutions that would kill U.S. EPA's carbon rules for new and existing power plants, the centerpiece of the Obama administration's domestic climate change agenda (*E&E Daily*, Nov. 18).

Collins was one of three Republican senators who yesterday voted against the resolutions. In a short interview yesterday, she said she was concerned about increases in pollution-related asthma attacks and the migration of ticks northward linked to climate change.

The two senators cited several other impacts on the United States tied to climate change in their letter, including effects on the U.S. economy and several sectors, including energy, agriculture and water supply. They also said they were concerned about droughts, wildfires and reduced snowpack in the West.

"Numerous studies indicate that the costs of climate change are already significant and will become even more so in the coming decades," they wrote.

Cantwell and Collins want GAO to examine both the benefits and costs of climate change in the United States and how those estimates are determined.

AIR POLLUTION:

EPA changing testing program in wake of VW scandal -- McCabe

Sean Reilly, E&E reporter

Published: Wednesday, November 18, 2015

U.S. EPA is upping its game with a more unpredictable testing regimen in the wake of the Volkswagen emissions cheating scandal, acting air chief Janet McCabe said this morning at the fall meeting of the agency's Clean Air Act Advisory Committee.

"We are very committed to getting this under control, dealing with the vehicles that are out there," McCabe said in response to a question from one of some 30 panel members gathered for the all-day session at a Northern Virginia hotel. Besides the usual cycle of vehicle emissions testing, the agency is doing both off-cycle and on-road testing, she said, adding that one light-duty diesel engine has already been certified.

McCabe's comments echoed previous statements by other EPA officials in the wake of the scandal, which was uncovered by West Virginia University researchers working for the International Council on Clean Transportation, a Washington, D.C.-based nonprofit.

In a presentation to the committee that lasted more than an hour, McCabe also provided a rundown of EPA's regulatory initiatives related to air quality, including the Clean Power Plan and its proposed revisions to the Cross-State Air Pollution Rule unveiled yesterday (*Greenwire*, Nov. 17).

The latter is "critical" to reducing downwind power plant nitrogen oxide emissions, McCabe said. In regard

to the Clean Power Plan, which is geared to cutting power plants' greenhouse gas releases, EPA officials are well into the implementation phase and are "very encouraged" by the dialogue so far, she said.

"We are all in on this in terms of being available to help the states to the extent that they would like our help as we go forward," she said.

Despite a wave of lawsuits from states and industry groups, McCabe added, "we remain very confident about the legal underpinnings of the rules and also the critical importance of moving forward with action to reduce carbon emissions."

The advisory committee, which meets twice a year, also voted to accept a slate of draft recommendations from an air toxics work group. Much of the afternoon portion of the meeting will be devoted to the Clean Power Plan and a tribal indoor air update, according to a draft agenda.

COAL:

Dems press GOP to get on board with energy transition

Manuel Quiñones and Amanda Reilly, E&E reporters

Published: Wednesday, November 18, 2015

U.S. EPA Administrator Gina McCarthy and prominent Democrats are pressing pro-coal politicians to accept what they see as the new reality for the coal industry.

The GOP has for years been using the debate about coal's future to make electoral gains in traditionally Democratic strongholds, particularly in Appalachia, blaming President Obama for the fuel's downturn and the region's economic woes.

Now Democrats and other supporters of increased regulations affecting coal are increasingly fighting back, accusing the GOP of turning its back on the very communities it is trying to woo.

McCarthy, during an event in Washington, D.C., this morning, said, "There has been a transition since the '80s away from coal being the fuel of choice in the U.S." And she called on lawmakers like Senate Majority Leader Mitch McConnell (R-Ky.) to help address the fallout.

Just yesterday, McConnell's chamber voted for a resolution to block EPA's new rule to cut greenhouse gas emissions from power plants, known as the Clean Power Plan (*E&E Daily*, Nov. 18).

Analysts say such rules, plus competition from natural gas and other market factors, including renewable sources becoming a cheaper alternative, are hurting coal's future.

"That's why it's not all about the Clean Power Plan, it's also about proposals that the president has put on the table to try to address those real community concerns," McCarthy said at a forum sponsored by Bloomberg. "And until we embrace both of those, I think the senator will continue to have his position."

McCarthy was referring to the president's Power Plus Plan to help displaced communities and workers. Pro-coal lawmakers like McConnell have embraced at least some of its tenets, but others have generated some controversy (*E&E Daily*, Sept. 11).

Democratic presidential candidate Hillary Clinton in recent days released a plan of her own to provide coal communities with tools like worker aid and repurposing old plants and mines (*Greenwire*, Nov. 13).

"Coal's would-be friends in Washington have decided to bash the administration and defend the status quo rather than offer a way forward," Arizona Rep. Raúl Grijalva, top Democrat on the House Natural Resources Committee, wrote in a *New York Times* op-ed.

Yesterday Cliff Forrest, president of Pennsylvania-based Rosebud Mining Co., laughed off Clinton's plan. "Thanks a lot, Mrs. Clinton," he said (*E&E Daily*, Nov. 18).

It's not that many coal executives and allies in Congress are against aid for communities, but they also want to see regulatory relief.

"There's no better indication that our pushback on these wrongheaded regulations is working than Gina McCarthy's comments today," said Bill Bissett, president of the Kentucky Coal Association.

He said, "We've heard internally that EPA was absolutely unprepared for this level of resistance for their anti-coal regulations on greenhouse gases."

And he added, "I'm pretty sure Leader McConnell will pass on her guidance."

House Appropriations Chairman Hal Rogers (R-Ky.) has been among the most outspoken Republicans about the need to help diversify struggling communities but is also pushing for policies to scrap EPA regulations.

Still, McCarthy says the agency is not trying to shape the nation's energy landscape, as critics say, or hurt the economy.

"EPA is not doing an end-of-pipe strategy," she said. "We are looking at where the energy transition is already happening."

COAL:

Jury begins deliberating in trial of ex-Massey CEO Don Blankenship

Published: Wednesday, November 18, 2015

A jury is now deliberating in the trial of former Massey Energy CEO Don Blankenship after prosecutors and defense attorneys completed closing arguments yesterday.

Prosecutors have accused Blankenship of routinely conspiring to violate mine safety standards to increase profits. Blankenship's attorneys argued that there was no evidence he was involved in a conspiracy.

The company's poor safety record was exposed when the Upper Big Branch mine exploded in 2010, killing 29 workers, prosecutors said.

"Instead of hitting the brakes, he pushed his foot down on the gas as far as it would go," Assistant U.S. Attorney Steven Ruby said.

Defense attorney William Taylor said Blankenship's leadership of the company did not mean he was culpable for the violations.

"We require the government to prove more than the man was in charge of a company when a terrible disaster occurred," Taylor said (Pittsburgh *Tribune News*, Nov. 18).

Family members of the deceased miners say the trial has been difficult for them.

Judy Jones Petersen said she found it frustrating that jurors heard so much about Blankenship's safety concerns but little about how the 29 miners died.

Though criminal charges in these cases are rare, the prosecution has been largely unable to use details of how the miners were killed against the former CEO.

"We can't say a word about the loss of life here," Petersen said. "My brother's life doesn't mean anything here to these jurors."

Blankenship could face up to 30 years in prison if convicted (Jonathan Mattise, AP/ABC News, Nov. 18). -- **SP**

DEFENSE:

Army looks to connect extreme weather to climate change

Ariel Wittenberg, E&E reporter

Published: Wednesday, November 18, 2015

Army officials have begun trying to determine whether a series of unusual weather events at bases across the country can be tied to climate change.

After years of reports of hurricanes, floods, wildfires and other events that caused abnormally large amounts of damage, the Office of the Assistant Secretary of the Army for Installations, Energy and Environment is teaming up with its Training Support Systems Division in an attempt to track unusually strong weather events and potentially identify a trend.

Starting this month, the Army is asking that base commanders indicate whether damage caused by a weather event is considered abnormal when they fill out the requisite forms for repairs.

"We are not scientists, we are just folks that operate in our training and pay for its sustainment," said Training Support Systems Division Chief Thomas Macia. "We are looking for indicators that might alert us to the future, and whether what we see as out of the norm is actually out of the norm."

The anecdotal evidence is strong. In 2014, the Government Accountability Office wrote a report detailing how recent weather events have affected training throughout the Defense Department.

The report included an account of flash flooding in the Mojave Desert that rendered emergency runways at Fort Irwin unusable for eight months, grounding aircraft performing testing and training missions. It also described how fears of starting wildfires in the West had limited some bases' use of live fire during training.

The weather has not relented since the GAO report was published. This summer, training ranges across the country were affected by everything from melting permafrost in Alaska to wildfires in California and flooding in South Carolina.

In September, Richard Kidd, deputy assistant secretary of the Army for energy and sustainability, described the instances as causing an unprecedented decrease in Army preparedness.

"Right now, this year, the Army has never had as much training disrupted by weather-related events in our entire history," he said at a roundtable on energy security at the Pew Charitable Trusts. "It is degrading the quality of our readiness today."

The Army currently budgets for weather damage at all its training ranges, which are located outdoors and most vulnerable to weather. Damaged training areas typically receive the "minimal repair needed to get the facility back in service," Macia said.

Knowing whether "abnormal" weather events are part of a "consistent pattern" would help justify building more resilient ranges that mitigate the impacts of climate change.

"Any asset in an outdoor setting will be affected by weather, and we take that into account when we budget for maintenance, but if we see that this is a predictable pattern, we will have to adjust how we do that," he said.

Army training ranges have been the most affected. The training areas are diverse and can be used for everything from small firearms training to instructing troops on how to drive tanks. They can be as small as a local gun range or span hundreds of acres. Most Army installations have only one range for each type of training conducted at the base, so if an artillery firing range is flooded out, for example, those exercises would have to stop completely until the range was repaired.

"The absence of that asset is the real cost of this," he said.

Kathleen White of the Army Corps of Engineers said it can be difficult to prove that weather events like extreme drought or flooding are tied to climate change.

"It is difficult to tease out a signal in the noise and attribute it to climate change, other than anecdotally," said White, the senior lead for global and climate change at the Army Corps' Institute for Water Resources.

While the Army Corps has written guidance for climate change adaptation related to sea-level rise, she said that inland flooding caused by climate change is much more difficult to predict.

She did say that if the Army were able to prove a pattern of specific bases experiencing more frequent flooding or permafrost melt, it would help inform the Army Corps when designing how to rebuild damaged training ranges.

DEFENSE:

Group urges 'Marshall Plan' for climate change in Asia-Pacific

Ariel Wittenberg, E&E reporter

Published: Wednesday, November 18, 2015

The United States should take a page from its post-World War II playbook and rebuff Chinese influence in the Asia-Pacific region by helping smaller nations adapt to climate change, the Center for Climate and Security urges in a new report.

Calling the idea an "Asia-Pacific equivalent of a Marshall Plan," the report encourages policymakers to model their efforts on the 1949 initiative that provided a $13 billion package of developmental assistance to European countries that agreed to meet American diplomatic and defense priorities. The plan is often credited with helping to rebuild the region following World War II without having Western Europe succumb to Soviet influences.

"It stands to reason that such a broadly-successful strategy and plan be mined for ideas on how to flesh out a new U.S. strategy in the Asia-Pacific -- a region that is very vulnerable to climate change threats and grappling with the risks and benefits of a rising China," the report says. "In this context the U.S. requires the modern equivalent of the Marshall Plan for the region to assist nations in addressing climate-related threats, and to complement its current military and economic engagement in the area."

American military and diplomatic efforts are currently in the early stages of a policy initiative known as the "Asia-Pacific rebalance," the report says, to pivot the focus of the Defense Department, the State Department and the U.S. Agency for International Development toward the region.

At the same time, China's economic and military influence has been expanding in the region, with the report noting that nearby nations "have been slowly reorienting their foreign policies to accommodate an increasingly powerful Beijing."

Helping nations adapt to the effects of climate change is one way for the United States to maintain its influence, the report says. Such an effort could broaden alliances and deepen trust particularly with climate-vulnerable countries like Vietnam and Indonesia, with whom American relations have sometimes been rocky, it says.

"The U.S. must offer key countries in the region the opportunities they need to both grow their economies and combat significant transnational threats to their well-being," the report says. "In this context, taking a page out of George C. Marshall's book might make a lot of sense."

While the report does not suggest a specific dollar amount of investment that a "Climate Security Plan" would make in the Asia-Pacific, it does list a number of pre-existing programs that could be expanded as part of the plan.

For example, the report notes that the United States already supported the 2013 Majuro Declaration at the Pacific Islands Forum, which called on countries to create a fund for addressing climate risks in the area. The report also says that the United States could launch a program for climate change adaptation similar to the $6 billion U.S.-Asia-Pacific Comprehensive Partnership for a Sustainable Energy launched in 2012 with Brunei and Indonesia.

"If the U.S. were to lead now with the delivery and expansion of these investments and programs, it could bolster its efforts to remain an indispensable nation in the Asia-Pacific region and potentially do so in a way that makes a very small dent in the federal budget," the report says. "If not, the U.S. stands to either cede that ground to a rising China or ... act as a bystander to growing instability and disruption."

RENEWABLES:

Solar developers ask FERC to intervene in Conn. program

Hannah Northey, E&E reporter

Published: Wednesday, November 18, 2015

Solar investors want the federal government to intervene in Connecticut's implementation of a decades-old law to boost sales of renewables, arguing that the state is overstepping its jurisdictional authority.

Allco Renewable Energy Ltd., a New York-based firm that develops and invests in solar projects, petitioned the Federal Energy Regulatory Commission last week to initiate an enforcement action against two Connecticut state agencies -- the Department of Energy and Environmental Protection and the Public Utilities Regulatory Authority -- for improperly enforcing the Public Utility Regulatory Policies Act of 1978.

PURPA is aimed at bolstering renewables and efficiency by requiring utilities to buy power from "qualifying facilities," including cogeneration plants that use steam or heat from industrial and commercial processes, as well as solar, wind, biomass, waste and other facilities that are 80 megawatts or less. FERC has overseen the treatment of qualifying facilities for decades.

Thomas Melone, Allco's president, argued in the company's filing to FERC that Congress gave the commission -- not states -- the exclusive right to regulate wholesale, interstate electricity sales. Connecticut regulators in a 2013 law crafted under PURPA overstepped their authority and incorrectly applied PURPA, he said.

Melone pointed to the Department of Energy and Environmental Protection's decision in 2013 to compel utilities in the state to enter into a contract with a 250 MW wind farm, which he said was "much too large" to fit the qualifications of PURPA. As a result, a project Allco invested in was not selected, Melone said.

The Connecticut Department of Energy and Environmental Protection was not immediately available for comment.

Allco is threatening to sue the state agencies if FERC doesn't intervene.

"While PURPA thereby gives state regulatory agencies some discretion in implementing commission's rules, they cannot violate those rules," he wrote. "And, because states' only authority to regulate wholesale electricity sales is derived from PURPA, any state rule that conflicts with PURPA is necessarily preempted."

PURPA has recently gained attention on and off Capitol Hill.

Congressional Republicans earlier this month called on FERC to explore whether changes are needed to improve the law, which has long rankled utilities opposed to forced purchase of power.

Berkshire Hathaway Energy, for one, has argued that FERC's "overly restrictive" interpretation of the statute failed to keep up with the times or recognize that small generators once facing steep barriers can now reach emerging markets (*Greenwire*, Nov. 9).

NUCLEAR POWER:

Wash. plant suffers small reactor leak

Published: Wednesday, November 18, 2015

The Pacific Northwest's only commercial nuclear power plant suffered a reactor core fuel leak last week, but operators stressed that there was no danger to workers or the public.

Workers had to remove four fuel assemblies from service at the Columbia Generating Station in Richland, Wash., because of a pinhole leak, Energy Northwest spokesman John Dobken said. "Barely detectable"

levels of radioactive gases were seen in the plant's coolant water, he said, but officials were nonetheless notified.

The leak could have been caused by debris in the reactor or a manufacturing defect, Dobken said (Ted Sickinger, Portland *Oregonian*, Nov. 13). **-- BTP**

OIL AND GAS:

Tornado totals vacant Halliburton plant

Published: Wednesday, November 18, 2015

A vacant Halliburton plant located in Texas sustained extensive damage after a tornado tore through the area Monday, a chief deputy in the Gray County sheriff's office said.

The company's Pampa district office has been vacant since April after it announced a rollback plan that slashed costs and cut jobs as a result of the oil slowdown. No employees or chemicals were there when the tornado struck.

Reports say two deputies were exposed to natural gas that leaked from damaged lines, but they were assessed by medical personnel on-site and declined further attention. Initial reports claimed that the plant contained radioactive material, but those statements have been deemed inaccurate.

Company officials assessed the site but have not yet provided damage estimates (Rhiannon Meyers, *Fuel Fix*, Nov. 17). **-- AK**

DOE:

Hanford medical record whistleblower case underway

Hannah Hess, E&E reporter

Published: Wednesday, November 18, 2015

Two whistleblowers who lost their jobs at the Hanford nuclear site in Washington after exposing problems with the Hanford clinic's electronic medical records system in August 2012 head to court this week.

Kirtley Clem and Matthew Spencer worked for an Energy Department subcontractor, providing information technology support to implement a new health system. A few months into the project, after Computer Sciences Corp., or CSC, management dismissed their concerns, Clem and Spencer reported to DOE critical problems tracking medical restrictions, such as sensitivity to beryllium, a metal known to cause lung damage that was used at the facility.

"Specifically, Complainant and his co-worker explained that using [the system] risked violating patient confidentiality rules, potentially restricting individuals from work who should be allowed to work, and most importantly releasing individuals to work who should be restricted," according to the November 2014 ruling by the Department of Labor that found CSC retaliated against the whistleblowers.

CSC was ordered to pay back wages of $186,000 to the two former workers as part of that decision.

But the corporation, currently serving as a subcontractor for the Hanford medical clinic, appealed the

ruling.

Hearings in the case started yesterday in Kennewick, Wash., and are scheduled to last through 4 p.m. tomorrow, according to Hanford Challenge, which is involved in the workers' case.

CSC also faces scrutiny from DOE. On Sept. 21, the DOE Office of Enterprise Assessments' Office of Enforcement notified the corporation of its intent to conduct a worker safety and health investigation into the electronic medical records concerns raised by the two former employees. The office is also considering taking enforcement action against CSC for retaliating against Clem and Spencer.

RAIL:

Canadian Pacific offers $28B for Norfolk Southern

Published: Wednesday, November 18, 2015

Two of North American's largest railroads moved closer to a merger yesterday.

Canadian Pacific Railway Ltd. said it sent a letter to Norfolk Southern Corp. outlining a proposal valued at more than $28 billion to combine the two companies.

Canadian Pacific -- in a bid to amp up pressure on Norfolk Southern -- said the combined company could yield faster earnings growth and win regulatory approval.

Norfolk Southern described the overture in a statement as an "unsolicited, low-premium, nonbinding and highly conditional indication of interest."

The railroad said it would consider the offer but noted "any consolidation among large freight railroads would face significant regulatory hurdles" (Stevens/Benoit, *Wall Street Journal*, Nov. 17). **-- SP**

UNITED KINGDOM:

Nation to close coal-fired power plants by 2025

Published: Wednesday, November 18, 2015

The British government today said it will close all of the United Kingdom's coal-fired power plants by 2025 unless they are ready to capture and store all of their carbon emissions in compliance with tightening E.U. standards.

Secretary of State for Energy and Climate Change Amber Rudd said phasing out all "polluting, carbon-intensive 50-year-old coal-fired power stations" is critical for the United Kingdom to meet its legally binding pledge to cut carbon dioxide emissions to 80 percent below 1990 levels by 2050.

The plan emphasizes that gas and nuclear power will replace a third of British electricity currently generated by coal.

"One of the greatest and most cost-effective contributions we can make to emission reductions in electricity is by replacing coal-fired power stations with gas," Rudd said.

The shift ahead of the U.N. climate negotiations in Paris this month was hailed by some climate activists, but others critiqued the reliance on gas.

"Phasing out coal is essential for the climate. But switching from coal to gas is like an alcoholic switching from two bottles of whisky a day to two bottles of port," said Simon Bullock of Friends of the Earth (Susanna Twidale, Reuters, Nov. 18). **– DTB**

1.SCIENCE:

Runaway global warming becomes a concern as permafrost melts

GOOSE LAKE, Northwest Territories -- Goose Lake is at the knife's edge of climate change. Half a century ago, this region, which is 250 miles from the Arctic Circle, used to contain mostly permafrost, or perennially frozen ground. Today, the ground has partially thawed and the region is predominantly wetland. The rapid changes have been catalyzed by climate change, which has warmed these environs by 4 degrees Fahrenheit in the past half-century.

2.UTILITIES:

Europe sees 2 major moves toward reliance on renewable energy

Enel SpA, the biggest utility in Italy and among the biggest in Europe, is buying out the minority shareholders of its renewable energy business, Enel Green Power. The company called the consolidation "beneficial," predicting it will reduce the volatility of producing electricity, smooth out grid connections and take advantage of the "acceleration in the pace of growth in the renewable business."

Oil, ethanol groups trade blows with RFS imminent

By Kevin Rogers

With three years' worth of Renewable Fuel Standard blending levels set to be finalized as early as next week, the ethanol and oil industries are making their last pitches to the White House — and trading barbs with each other.

EPA plans to finalize late standards for 2014 and 2015 and complete its 2016 volumes by Nov. 30. The rules are currently under final review from the Office of Management and Budget, which is also meeting with industry stakeholders.

The Renewable Fuels Association and Growth Energy, at a Wednesday meeting with OMB, urged the government to break the "monopoly Big Oil has on the liquid fuels transporation market" and move the program forward.

The American Petroleum Institute, slated to meet OMB tomorrow, plans to tell the government not to "prop up" the ethanol market with higher blending mandates. In the runup to the meeting, the oil group unveiled a poll detailing registered voters' concerns with the mandate.

The final arguments presented to the Environmental Protection Agency mirror what the advocates have been saying since the three years' worth of biofuel blending levels were proposed in May.

The ethanol industry contends that EPA shortchanged the RFS by setting blending below the statutory levels set by the 2005 law that created the program. API and its allies, however, argue that the 2016 proposal would still put too much ethanol into the market and break the 10-percent "blend wall," where, refiners say, the market becomes saturated, to the detriment of engines and fueling infrastructure.

The Energy Information Administration projects that gasoline demand will hit a nine-year high in 2016, and, based on that, the ethanol groups pressed OMB for a billion-gallon increase over the amount of "conventional biofuels," most commonly ethanol, EPA proposed for next year's standards.

That would set total biofuel production at the statutory 15 billion gallons for the year, up from the 14 billion EPA proposed for ethanol and other conventional biofuels.

RFA President and CEO Bob Dinneen and Growth Energy CEO Tom Buis disputed the oil industry's protests that the move would break the ethanol "blend wall," which they call a ploy to dodge compliance with the law.

"This meeting was really our closing argument before the administration makes its final decision," they said in a statement. "We impressed upon OMB that the oil industry's 'blend wall' narrative is simply not true. The president needs to uphold the statute."

API, meanwhile, sought to highlight those blend wall concerns, as well as gasoline price fears, as it unveiled the results its telephone survey of registered voters.

The survey of 1,021 voters, prepared by the Harris Poll, found that 75 percent were concerned that exceeding 10 percent ethanol in the market could harm engines without protection from warranties; 78 percent were concerned that those levels could increase gasoline prices; and 77 percent said they were concerned that increased corn ethanol production could strain food prices.

The survey questions referenced the "blend wall" and the potential vehicle, price and food implications. The questions did not use the term "Renewable Fuel Standard" nor present any

potential benefits of the program. The poll had a margin of error of plus or minus 3 percentage points.

Dineen, in a statement, dismissed the poll.

"I would like to say that I am shocked API has stooped to such measures as trying to promote an obvious push poll, containing extremely biased questions, as a credible indication of public sentiment about the RFS and ethanol, but I am not," he said.

On a call with reporters, however, API Downstream Director Bob Greco said the poll indicated that the public, on a bipartisan basis, opposes stronger blending mandates. He said that view was held by majorities of Republicans, Democrats, and independents.

"The public gets it. Regardless of their party affiliation, voters are concerned with mandates that try to force too much ethanol into our fuel supply," he said.

Greco said API would argue in Friday's meeting that the ethanol industry is mature enough that it doesn't need a government boost through the RFS.

"If the ethanol industry believes they need to push it to 15 billion, that just underscores that the fuel is not competitive," he said.

The group will press to keep biofuels levels below 9.7 percent of the overall fuel supply.

With Thanksgiving next week, and with EPA Administrator Gina McCarthy headed to United Nations-sponsored climate talks in Paris on Nov. 30, Greco said the rules would likely be unveiled next week.

"The timing is interesting," he said. "I guess we would not be surprised if the rule came out next week. We will operate under that assumption, but you never know with these administrative actions ... but EPA continues to insist by November 30, despite Thanksgiving and the climate negotiations."

Agency spokeswoman Melissa Harrison would not offer any update beyond the Nov. 30 deadline, and OMB's last scheduled meeting on the standards will be with Biogas Researchers Inc. on Tuesday.

Manslaughter charges filed in deadly 2012 platform blast

By Michael Kunzelman and Kevin McGill

NEW ORLEANS (AP) — A federal grand jury indicted two companies on involuntary manslaughter charges and three people face charges in a deadly 2012 explosion on an oil production platform in the Gulf of Mexico, the Justice Department said Thursday.

The explosion and fire started during welding work on a platform owned by Black Elk Energy Offshore Operations LLC, killing three workers and injuring several others. In lawsuits and a federal report, the company and its contractors have been accused of failing to follow proper safety practices and rushing work.

Black Elk Energy and one of its contractors, Grand Isle Shipyards Inc., were charged with three counts of involuntary manslaughter, as well as eight charges involving federal safety practices under the Outer Continental Shelf Lands Act and one violation of the Clean Water Act.

Another contractor, Wood Group PSN Inc., and three workers were charged with violating OCSLA and the Clean Water Act. The workers charged are Don Moss, 46, of Groves, Texas; Curtis Dantin, 50, of Cut Off, Louisiana; and Christopher Srubar, 40, of Destrehan, Louisiana.

Judge: Jurors must keep deliberating in ex-coal CEO trial

By Jonathan Matisse

CHARLESTON, W.Va. (AP) — Jurors told a federal judge Thursday that they cannot agree on a verdict in the trial of ex-Massey Energy CEO Don Blankenship, but the judge ordered them to continue deliberating.

The jury sent a note to U.S. District Judge Irene Berger late Thursday morning asking how long they should continue deliberating and saying they could not agree.

Berger assembled jurors in the Charleston, West Virginia, courtroom and told them that given the length of the trial and the number of witnesses, they must continue trying to reach a verdict.

The jury deliberated for an hour Tuesday and all day Wednesday.

Blankenship is charged with conspiring to break safety laws and defrauding mine regulators at West Virginia's Upper Big Branch Mine, and lying to financial regulators and investors about safety. The mine exploded in 2010, killing 29 men.

Regulators pause review of $2B line to ship Iowa wind energy

By Ryan J. Foley

IOWA CITY, Iowa (AP) — Regulators are suspending review of a proposed 500-mile, $2 billion transmission line that would take electricity produced by wind turbines in northwest Iowa to Illinois customers.

Rock Island Clean Line LLC said Thursday it asked the Iowa Utilities Board to pause a technical review of the project while it assesses how to move forward. The board has granted the request.

The project faces opposition from rural landowners. It was dealt a setback in February, when the board said it would decide whether to approve the project and whether to grant eminent domain in the same hearing. The developer had asked to separate those issues.

The company says the ruling means it must spend millions of dollars to acquire property while running the risk the project will ultimately be rejected.

VW has only a few costly options to fix polluting diesels

By Tom Krisher

DETROIT (AP) — When Volkswagen submits a plan to fix emissions-cheating diesel engines on Friday, it will have only two options for most of the cars.

It can install a bigger exhaust system to trap harmful nitrogen oxide, or it can retrofit a chemical treatment process that cuts pollution.

The bigger exhaust will likely hurt performance and gas mileage, angering car owners. But the chemical treatment, while saving acceleration and mileage, needs a clumsy storage tank and multiple hardware changes to work. In either case, almost a half-million cars would have to be recalled for the repairs.

Experts say both options will be expensive, perhaps so costly that it will be cheaper to buy back some of the older models.

Audi says US sales undiminished by diesel emissions scandal

By The Associated Press

LOS ANGELES (AP) — The emissions-rigging scandal that has engulfed German auto giant Volkswagen will not diminish sales of one of its luxury brands in the United States, the head of Audi of America predicted Wednesday.

In the two months since news broke that hundreds of thousands of diesel cars — mostly VWs, but also some Audi models — had their emissions devices doctored to beat US tailpipe tests, sales of Audis have been at record levels compared to the same months in years past, according to company data.

"We'll have a record November and a record December," Audi of America President Scott Keogh told reporters at the Los Angeles Auto Show. In 2014, Audi sold 36,000 cars in the U.S. in November and December.

Keogh added that while sales were important, fixing cars with emissions test "defeat devices" was a priority.

Chevrolet Volt wins 'Green Car of the Year' at LA Auto Show

By The Associated Press

LOS ANGELES (AP) — An auto industry magazine has named the 2016 Chevrolet Volt its "Green Car of the Year."

The hybrid gas-electric Volt was honored Thursday at the Los Angeles Auto Show.

Green Car Journal says the car won because of its extended range. Government fuel-economy figures show that the Volt can go 53 miles on electric power alone and 420 miles on gas and battery power.

It's the second time Green Car Journal has recognized the Volt, which also won the award with its first-generation model in 2011. That model could only go 38 miles on electricity

alone.

Crews continue cleanup after Northwest storm

By Lisa Baumann

SEATTLE (AP) — Well over 100,000 customers remained without power in Washington state Thursday after a powerful storm killed three people and prompted an emergency declaration from the governor.

Gov. Jay Inslee declared a state of emergency Wednesday for all Washington counties, clearing the way for state officials to increase aid to those with storm damage.

Winds on Tuesday exceeded 100 mph in some areas of the Inland Northwest.

A 54-year-old identified as Lea Anne Scott was killed when a tree fell in Spokane. Grant M. Strinden, 23, died when a tree crushed his car as he was driving in Snohomish County, authorities said, and a third victim, Carolyn M. Wilford, 70, was killed when a tree landed on her car on Highway 904 about 15 miles southwest of Spokane.

Puerto Rico adopts land-use plan to regulate development

By The Associated Press

SAN JUAN, Puerto Rico (AP) — Puerto Rico's governor has signed a land-use plan that aims to regulate development and protect the U.S. territory's natural resources.

Alejandro García Padilla says the plan identifies land according to its historical, agricultural, rural or urban value. He said Thursday that for decades Puerto Rico has been developed in an inconsistent way because there was no land-use plan.

He said the plan promotes more walkable cities and the use of mass transportation. García said it also protects 600,000 acres (243,000 hectares) of agricultural lands and will help the island prepare for climate change.

EU: Hungary not transparent in deal to expand power plant

Sponsored Links

By The Associated Press

BUDAPEST, Hungary (AP) — The European Union has opened a legal case against Hungary because of questions about contracts for the expansion of its only nuclear power plant.

The EU Commission said Thursday that even after consultations with Hungary, it "still has concerns regarding the compatibility of the project with EU public procurement rules."

The expansion of the Soviet-built plant in the city of Paks will be carried out by Russia's state-owned Rosatom and is being financed mostly with a Russian loan of 10 billion euros ($10.7 billion).

Janos Lazar, Prime Minister Viktor Orban's chief of staff, said Hungarian and EU companies would be able to apply for up to 60 percent of the project's contracts.

Oil, ethanol groups trade blows with RFS imminent

By Kevin Rogers

With three years' worth of Renewable Fuel Standard blending levels set to be finalized as early as next week, the ethanol and oil industries are making their last pitches to the White House — and trading barbs with each other.

EPA plans to finalize late standards for 2014 and 2015 and complete its 2016 volumes by Nov. 30. The rules are currently under final review from the Office of Management and Budget, which is also meeting with industry stakeholders.

The Renewable Fuels Association and Growth Energy, at a Wednesday meeting with OMB, urged the government to break the "monopoly Big Oil has on the liquid fuels transporation market" and move the program forward.

The American Petroleum Institute, slated to meet OMB tomorrow, plans to tell the government not to "prop up" the ethanol market with higher blending mandates. In the runup to the meeting, the oil group unveiled a poll detailing registered voters' concerns with the mandate.

The final arguments presented to the Environmental Protection Agency mirror what the advocates have been saying since the three years' worth of biofuel blending levels were proposed in May.

The ethanol industry contends that EPA shortchanged the RFS by setting blending below the statutory levels set by the 2005 law that created the program. API and its allies, however, argue that the 2016 proposal would still put too much ethanol into the market and break the 10-percent "blend wall," where, refiners say, the market becomes saturated, to the detriment of engines and fueling infrastructure.

The Energy Information Administration projects that gasoline demand will hit a nine-year high in 2016, and, based on that, the ethanol groups pressed OMB for a billion-gallon increase over the amount of "conventional biofuels," most commonly ethanol, EPA proposed for next year's standards.

That would set total biofuel production at the statutory 15 billion gallons for the year, up from the 14 billion EPA proposed for ethanol and other conventional biofuels.

RFA President and CEO Bob Dinneen and Growth Energy CEO Tom Buis disputed the oil industry's protests that the move would break the ethanol "blend wall," which they call a ploy to dodge compliance with the law.

"This meeting was really our closing argument before the administration makes its final decision," they said in a statement. "We impressed upon OMB that the oil industry's 'blend wall' narrative is simply not true. The president needs to uphold the statute."

API, meanwhile, sought to highlight those blend wall concerns, as well as gasoline price fears, as it unveiled the results its telephone survey of registered voters.

The survey of 1,021 voters, prepared by the Harris Poll, found that 75 percent were concerned that exceeding 10 percent ethanol in the market could harm engines without protection from warranties; 78 percent were concerned that those levels could increase gasoline prices; and 77 percent said they were concerned that increased corn ethanol production could strain food prices.

The survey questions referenced the "blend wall" and the potential vehicle, price and food implications. The questions did not use the term "Renewable Fuel Standard" nor present any

potential benefits of the program. The poll had a margin of error of plus or minus 3 percentage points.

Dineen, in a statement, dismissed the poll.

"I would like to say that I am shocked API has stooped to such measures as trying to promote an obvious push poll, containing extremely biased questions, as a credible indication of public sentiment about the RFS and ethanol, but I am not," he said.

On a call with reporters, however, API Downstream Director Bob Greco said the poll indicated that the public, on a bipartisan basis, opposes stronger blending mandates. He said that view was held by majorities of Republicans, Democrats, and independents.

"The public gets it. Regardless of their party affiliation, voters are concerned with mandates that try to force too much ethanol into our fuel supply," he said.

Greco said API would argue in Friday's meeting that the ethanol industry is mature enough that it doesn't need a government boost through the RFS.

"If the ethanol industry believes they need to push it to 15 billion, that just underscores that the fuel is not competitive," he said.

The group will press to keep biofuels levels below 9.7 percent of the overall fuel supply.

With Thanksgiving next week, and with EPA Administrator Gina McCarthy headed to United Nations-sponsored climate talks in Paris on Nov. 30, Greco said the rules would likely be unveiled next week.

"The timing is interesting," he said. "I guess we would not be surprised if the rule came out next week. We will operate under that assumption, but you never know with these administrative actions ... but EPA continues to insist by November 30, despite Thanksgiving and the climate negotiations."

Agency spokeswoman Melissa Harrison would not offer any update beyond the Nov. 30 deadline, and OMB's last scheduled meeting on the standards will be with Biogas Researchers Inc. on Tuesday.

Regulators pause review of $2B line to ship Iowa wind energy

By Ryan J. Foley

IOWA CITY, Iowa (AP) — Regulators are suspending review of a proposed 500-mile, $2 billion transmission line that would take electricity produced by wind turbines in northwest Iowa to Illinois customers.

Rock Island Clean Line LLC said Thursday it asked the Iowa Utilities Board to pause a technical review of the project while it assesses how to move forward. The board has granted the request.

The project faces opposition from rural landowners. It was dealt a setback in February, when the board said it would decide whether to approve the project and whether to grant eminent domain in the same hearing. The developer had asked to separate those issues.

The company says the ruling means it must spend millions of dollars to acquire property while running the risk the project will ultimately be rejected.

VW has only a few costly options to fix polluting diesels

By Tom Krisher

DETROIT (AP) — When Volkswagen submits a plan to fix emissions-cheating diesel engines on Friday, it will have only two options for most of the cars.

It can install a bigger exhaust system to trap harmful nitrogen oxide, or it can retrofit a chemical treatment process that cuts pollution.

The bigger exhaust will likely hurt performance and gas mileage, angering car owners. But the chemical treatment, while saving acceleration and mileage, needs a clumsy storage tank and multiple hardware changes to work. In either case, almost a half-million cars would have to be recalled for the repairs.

Experts say both options will be expensive, perhaps so costly that it will be cheaper to buy back some of the older models.

Audi says US sales undiminished by diesel emissions scandal

By The Associated Press

LOS ANGELES (AP) — The emissions-rigging scandal that has engulfed German auto giant Volkswagen will not diminish sales of one of its luxury brands in the United States, the head of Audi of America predicted Wednesday.

In the two months since news broke that hundreds of thousands of diesel cars — mostly VWs, but also some Audi models — had their emissions devices doctored to beat US tailpipe tests, sales of Audis have been at record levels compared to the same months in years past, according to company data.

"We'll have a record November and a record December," Audi of America President Scott Keogh told reporters at the Los Angeles Auto Show. In 2014, Audi sold 36,000 cars in the U.S. in November and December.

Keogh added that while sales were important, fixing cars with emissions test "defeat devices" was a priority.

Chevrolet Volt wins 'Green Car of the Year' at LA Auto Show

By The Associated Press

LOS ANGELES (AP) — An auto industry magazine has named the 2016 Chevrolet Volt its "Green Car of the Year."

The hybrid gas-electric Volt was honored Thursday at the Los Angeles Auto Show.

Green Car Journal says the car won because of its extended range. Government fuel-economy figures show that the Volt can go 53 miles on electric power alone and 420 miles on gas and battery power.

It's the second time Green Car Journal has recognized the Volt, which also won the award with its first-generation model in 2011. That model could only go 38 miles on electricity

alone.

Crews continue cleanup after Northwest storm

By Lisa Baumann

SEATTLE (AP) — Well over 100,000 customers remained without power in Washington state Thursday after a powerful storm killed three people and prompted an emergency declaration from the governor.

Gov. Jay Inslee declared a state of emergency Wednesday for all Washington counties, clearing the way for state officials to increase aid to those with storm damage.

Winds on Tuesday exceeded 100 mph in some areas of the Inland Northwest.

A 54-year-old identified as Lea Anne Scott was killed when a tree fell in Spokane. Grant M. Strinden, 23, died when a tree crushed his car as he was driving in Snohomish County, authorities said, and a third victim, Carolyn M. Wilford, 70, was killed when a tree landed on her car on Highway 904 about 15 miles southwest of Spokane.

Puerto Rico adopts land-use plan to regulate development

By The Associated Press

SAN JUAN, Puerto Rico (AP) — Puerto Rico's governor has signed a land-use plan that aims to regulate development and protect the U.S. territory's natural resources.

Alejandro García Padilla says the plan identifies land according to its historical, agricultural, rural or urban value. He said Thursday that for decades Puerto Rico has been developed in an inconsistent way because there was no land-use plan.

He said the plan promotes more walkable cities and the use of mass transportation. García said it also protects 600,000 acres (243,000 hectares) of agricultural lands and will help the island prepare for climate change.

EU: Hungary not transparent in deal to expand power plant

Sponsored Links

By The Associated Press

BUDAPEST, Hungary (AP) — The European Union has opened a legal case against Hungary because of questions about contracts for the expansion of its only nuclear power plant.

The EU Commission said Thursday that even after consultations with Hungary, it "still has concerns regarding the compatibility of the project with EU public procurement rules."

The expansion of the Soviet-built plant in the city of Paks will be carried out by Russia's state-owned Rosatom and is being financed mostly with a Russian loan of 10 billion euros ($10.7 billion).

Janos Lazar, Prime Minister Viktor Orban's chief of staff, said Hungarian and EU companies would be able to apply for up to 60 percent of the project's contracts.

GOP to Obama: Give us Paris vote, or lose climate funding

By Kevin Rogers

Senate Republicans are giving President Barack Obama an ultimatum on any United Nations-backed climate deal: allow the Senate to vote on any binding agreement, or it won't authorize climate funding for developing nations.

In a letter Thursday to Obama, Senate Environment and Public Works Committee Chairman James Inhofe, R-Okla., Sen. John Barrasso, R-Wyo., and 52 other Republicans warned the

president that he shouldn't go into Paris on Nov. 30 promising a commitment to the U.N. Green Climate Fund.

"We pledge that Congress will not allow U.S. taxpayer dollars to go to the Green Climate Fund until the forthcoming international climate agreement is submitted to the Senate for its constitutional advice and consent," the senators wrote.

They also urged Obama to tell State Department Special Envoy for Climate Change Todd Stern "to be forthcoming with his foreign counterparts representing developing nations in Paris about the views of members of Congress."

Congress must approve a new government funding bill by Dec. 11, the day the negotiations are set to conclude. Neither House nor Senate appropriators have approved funding for the climate fund, despite a $500 million request in Obama's budget.

However, an amendment to a Senate appropriations bill, authored by Sen. Jeff Merkley, D-Ore., would leave a door open for the State Department to put discretionary funds toward the program without additional congressional authorization.

Obama has pledged a total $3 billion to the fund, which offers climate aid to developing nations. The program seeks to mobilize $100 billion in finance annually by 2020.

A White House official who asked not to be identified said that fund remains a "priority for the president." The official also said that the shape of any climate agreement won't be determined until negotiations conclude, and it would be "premature to judge what an agreement's ultimate legal form would be."

Secretary of State John Kerry told the Financial Times last week that Obama was ready to use his own leverage to get the proper financing for the program during budget negotiations, suggesting a veto threat would be on the table to get the funding.

"If the president is prepared to veto the budget because it hasn't included it, you can usually find some money," Kerry said.

The letter wasn't the only tool senators unveiled Thursday to voice displeasure with a climate deal. Inhofe, joined by Sens. Roy Blunt, R-Mo., and Joe Manchin, D-W.Va., also introduced a non-binding resolution calling for Senate approval of any deal that includes policies that would put U.S. industry at a competitive disadvantage or require financial commitments, international oversight or future contributions.

Thursday's efforts cap off a long week of action against Obama's climate policies. Over the past few days, the Senate has approved resolutions to overturn the Environmental Protection Agency's power plant carbon regulations, while the House sent similar resolutions to the floor. Committees in both chambers also held hearings scrutinizing the administration's push for an international climate deal.

Democrats, however, have looked to boost the Paris conference, seeking a strong deal that would help forestall the worst impacts of climate change, while pressing for U.S. leadership on climate finance.

On Thursday, Democrats on the House Energy and Commerce Committee and members of the House Sustainable Energy & Environment Coalition held a forum featuring officials from Rwanda, the Republic of Seychelles, the Netherlands and France.

Ronald Jumeau, Seychelles' ambassador for climate change and small island developing state issues, told lawmakers that developed nations must take ambitious steps to ensure the most vulnerable countries can withstand climate change.

"This is an important moment for United States leadership in addressing our global future on climate change in ways that foster progress, sustainable growth and development and a globally sustainable economy," Jumeau said.

Democrats also used the forum to press Republicans to join them on climate policies and an international deal.

"It's time for Congress to stop bending to the will of special-interest polluters, and instead, to advance solutions that reduce our carbon emissions and invest in renewable energy," said Rep. John Sarbanes, D-Md.

Clean Line slows plan for $2B line to ship Iowa wind energy

By Ryan J. Foley

IOWA CITY, Iowa (AP) — A company proposing a $2 billion transmission line to ship Iowa wind energy to electric customers in Illinois confirmed Thursday that it has asked regulators to suspend their review while the company figures out how best to move forward with its plan.

Clean Line Energy Partners said it is assessing plans for the Rock Island Clean Line, amid opposition from some landowners and uncertain odds of gaining regulatory approval. The Iowa Utilities Board has granted the company's request to pause a technical review of its petitions to build the high-voltage, overhead line through 16 counties.

The board is the last major regulatory agency needed to sign off on the line, which the company says would produce enough electricity to power 1.4 million homes in the Midwest. The project has hit a snag in Iowa because some rural landowners have refused to sign voluntary easements granting access to build on their land, and critics oppose the use of eminent domain for the line.

The line would start in northwest Iowa and ship power produced by wind turbines 500 miles to a converter station near Chicago. The Federal Energy Regulatory Commission approved the project in 2012, and the Illinois Commerce Commission gave its OK last year.

Lawmakers want Corps, not EPA, to remediate landfill

By Jim Salter

ST. LOUIS (AP) — Four members of Missouri's congressional delegation on Thursday called for the Army Corps of Engineers to take over remediation of the West Lake Landfill site in St. Louis County, saying the Environmental Protection Agency is moving too slowly in addressing concerns about nuclear contamination.

Sens. Roy Blunt and Claire McCaskill and Reps. Ann Wagner and William Lacy Clay introduced legislation to transfer remediation authority and put the site in the Corps' Formerly Utilized Sites Remedial Action Program. Blunt and Wagner are Republicans; McCaskill and Clay are Democrats.

Residents who live near West Lake have grown frustrated with delays in remediating the site. Transferring cleanup oversight to the Corps "will help move the process forward and finally give these families the peace of mind they deserve," Blunt said in a statement.

McCaskill said the change would be a "concrete, positive step forward in a process that's been stagnant for far too long."

VW weighs finances as it prepares to present US engines fix

By Donogh McCabe

WOLFSBURG, Germany (AP) — Volkswagen's board is discussing the automaker's future financial strategy in the wake of its emissions-rigging scandal, and was due to present to U.S. authorities later Friday its plan to fix the affected diesel engines.

The 20-member board began meeting Friday morning behind closed doors to talk about how to best balance savings and investment in light of the massive costs it can expect to incur from the scandal.

Volkswagen in September admitted that almost 500,000 of its four-cylinder diesel cars in the U.S. had cheated on emissions tests thanks to a piece of software. A total of 11 million cars worldwide have the software, though it has not yet been confirmed that it helped cheat on emissions tests outside the U.S.

The carmaker has set aside 6.7 billion euros ($7.4 billion) to cover the costs of recalling the vehicles installed with the software but experts say the total expense, including fines and lost sales, could be several times higher.

What's for dinner? Genetically engineered salmon OK'd by FDA

By Mary Clare Jalonick

WASHINGTON (AP) — What's for dinner? Before long, it may well be genetically modified salmon, the first such altered animal cleared for human consumption in the United States.

Critics call it "frankenfish," but the Food and Drug Administration granted its approval on Thursday, saying the faster-growing salmon is safe to eat. It could be available in a couple of years.

"There are no biologically relevant differences in the nutritional profile of AquAdvantage Salmon compared to that of other farm-raised Atlantic salmon," the agency said.

The Obama administration had stalled in approving the salmon for more than five years amid consumer concerns about genetically modified foods. The fish grows twice as fast as normal salmon, so it reaches market size more quickly.

Great Lakes levels expected to stay mostly above average

By John Flesher

TRAVERSE CITY, Mich. (AP) — Water levels in the Great Lakes should remain mostly above average over the next six months as a powerful El Nino gives the region a break after two bitterly cold winters, but it's unclear whether there will be longer-term effects, federal scientists said Thursday.

El Nino, the warming of surface waters in the Pacific Ocean that can significantly influence weather in North America, is expected to bring milder temperatures and less snow across the lakes that hold nearly one-fifth of the world's surface fresh water, National Weather Service hydrologist Jim Noel said.

Those conditions are unlikely to alter the seasonal pattern of Great Lakes levels, which tend to rise in spring, peak in summer and decline in fall, said Keith Kompoltowicz, hydrology chief with the U.S. Army Corps of Engineers' district office in Detroit. But the fluctuations may be less pronounced than usual, partly because of El Nino's effects on evaporation and precipitation.

"We don't see any extreme events in terms of lake levels on the horizon," Kompoltowicz said as scientists released an updated forecast for the Great Lakes, which have rebounded sharply after a prolonged slump that lasted from 1998 through 2012.

GOP to Obama: Give us Paris vote, or lose climate funding

By Kevin Rogers

Senate Republicans are giving President Barack Obama an ultimatum on any United Nations-backed climate deal: allow the Senate to vote on any binding agreement, or it won't authorize climate funding for developing nations.

In a letter Thursday to Obama, Senate Environment and Public Works Committee Chairman James Inhofe, R-Okla., Sen. John Barrasso, R-Wyo., and 52 other Republicans warned the

president that he shouldn't go into Paris on Nov. 30 promising a commitment to the U.N. Green Climate Fund.

"We pledge that Congress will not allow U.S. taxpayer dollars to go to the Green Climate Fund until the forthcoming international climate agreement is submitted to the Senate for its constitutional advice and consent," the senators wrote.

They also urged Obama to tell State Department Special Envoy for Climate Change Todd Stern "to be forthcoming with his foreign counterparts representing developing nations in Paris about the views of members of Congress."

Congress must approve a new government funding bill by Dec. 11, the day the negotiations are set to conclude. Neither House nor Senate appropriators have approved funding for the climate fund, despite a $500 million request in Obama's budget.

However, an amendment to a Senate appropriations bill, authored by Sen. Jeff Merkley, D-Ore., would leave a door open for the State Department to put discretionary funds toward the program without additional congressional authorization.

Obama has pledged a total $3 billion to the fund, which offers climate aid to developing nations. The program seeks to mobilize $100 billion in finance annually by 2020.

A White House official who asked not to be identified said that fund remains a "priority for the president." The official also said that the shape of any climate agreement won't be determined until negotiations conclude, and it would be "premature to judge what an agreement's ultimate legal form would be."

Secretary of State John Kerry told the Financial Times last week that Obama was ready to use his own leverage to get the proper financing for the program during budget negotiations, suggesting a veto threat would be on the table to get the funding.

"If the president is prepared to veto the budget because it hasn't included it, you can usually find some money," Kerry said.

The letter wasn't the only tool senators unveiled Thursday to voice displeasure with a climate deal. Inhofe, joined by Sens. Roy Blunt, R-Mo., and Joe Manchin, D-W.Va., also introduced a non-binding resolution calling for Senate approval of any deal that includes policies that would put U.S. industry at a competitive disadvantage or require financial commitments, international oversight or future contributions.

Thursday's efforts cap off a long week of action against Obama's climate policies. Over the past few days, the Senate has approved resolutions to overturn the Environmental Protection Agency's power plant carbon regulations, while the House sent similar resolutions to the floor. Committees in both chambers also held hearings scrutinizing the administration's push for an international climate deal.

Democrats, however, have looked to boost the Paris conference, seeking a strong deal that would help forestall the worst impacts of climate change, while pressing for U.S. leadership on climate finance.

On Thursday, Democrats on the House Energy and Commerce Committee and members of the House Sustainable Energy & Environment Coalition held a forum featuring officials from Rwanda, the Republic of Seychelles, the Netherlands and France.

Ronald Jumeau, Seychelles' ambassador for climate change and small island developing state issues, told lawmakers that developed nations must take ambitious steps to ensure the most vulnerable countries can withstand climate change.

"This is an important moment for United States leadership in addressing our global future on climate change in ways that foster progress, sustainable growth and development and a globally sustainable economy," Jumeau said.

Democrats also used the forum to press Republicans to join them on climate policies and an international deal.

"It's time for Congress to stop bending to the will of special-interest polluters, and instead, to advance solutions that reduce our carbon emissions and invest in renewable energy," said Rep. John Sarbanes, D-Md.

What's for dinner? Genetically engineered salmon OK'd by FDA

By Mary Clare Jalonick

WASHINGTON (AP) — What's for dinner? Before long, it may well be genetically modified salmon, the first such altered animal cleared for human consumption in the United States.

Critics call it "frankenfish," but the Food and Drug Administration granted its approval on Thursday, saying the faster-growing salmon is safe to eat. It could be available in a couple of years.

"There are no biologically relevant differences in the nutritional profile of AquAdvantage Salmon compared to that of other farm-raised Atlantic salmon," the agency said.

The Obama administration had stalled in approving the salmon for more than five years amid consumer concerns about genetically modified foods. The fish grows twice as fast as normal salmon, so it reaches market size more quickly.

Great Lakes levels expected to stay mostly above average

By John Flesher

TRAVERSE CITY, Mich. (AP) — Water levels in the Great Lakes should remain mostly above average over the next six months as a powerful El Nino gives the region a break after two bitterly cold winters, but it's unclear whether there will be longer-term effects, federal scientists said Thursday.

El Nino, the warming of surface waters in the Pacific Ocean that can significantly influence weather in North America, is expected to bring milder temperatures and less snow across the lakes that hold nearly one-fifth of the world's surface fresh water, National Weather Service hydrologist Jim Noel said.

Those conditions are unlikely to alter the seasonal pattern of Great Lakes levels, which tend to rise in spring, peak in summer and decline in fall, said Keith Kompoltowicz, hydrology chief with the U.S. Army Corps of Engineers' district office in Detroit. But the fluctuations may be less pronounced than usual, partly because of El Nino's effects on evaporation and precipitation.

"We don't see any extreme events in terms of lake levels on the horizon," Kompoltowicz said as scientists released an updated forecast for the Great Lakes, which have rebounded sharply after a prolonged slump that lasted from 1998 through 2012.

Linc -

I found the following which may or may not be issues.

- I couldn't figure out the calculations for lighting for the 2012 Tiguan, 2012-2013 Tourag, 2013 Beetle, and 2012-2013 EOS in Section 3. These may not be correct.

- The high beam credits are missing from the 2012 Audi lighting so the credits don't add up in Section 3.

- No Cd delta is provided that I could find for ride height so the calculation can't be reproduced

- Two Cd delta's are provided for the spoiler, 0.008 and 0.020. With 0.008, the 0.2 g/mile credit they are claiming can be calculated. They seem to be also claiming a 0.2 g/mile credit for the spoiler with the 0.020 Cd delta even though it seems like the credit would be greater in this case

VW emissions issue extends to additional 75,000 vehicles

By David Shepardson

WASHINGTON (Reuters) - Volkswagen AG (VOWG_p.DE) has told U.S. regulators that emissions issues in larger luxury cars and SUVs extend to an additional 75,000 vehicles dating back to 2009, the U.S. Environmental Protection Agency said on Friday.

The disclosure widened the VW scandal, which had previously focussed mainly on smaller-engined, mass-market cars, and raised the possibility that engineers at both the Audi and VW brands could have been involved in separate emissions schemes.

The EPA and California Air Resources Board on Nov. 2 accused VW of evading emissions in at least 10,000 Audi, Porsche and VW sport utility vehicles and cars with 3.0-liter V-6 diesel engines. VW initially denied the findings.

During a meeting on Thursday, VW and Audi officials told the EPA that the issues extend to all 3.0-liter diesel engines from model years 2009 through 2016. The new disclosure covers a total of 85,000 vehicles, the EPA said.

California Air Resources Board spokesman Dave Clegern said Audi admitted that the vehicles had auxiliary emissions control equipment that was not disclosed to the U.S. government.

"That should have been reported," Clegern said, adding that the agencies are now investigating whether that constituted intentional cheating on VW's part.

Audi spokesman Brad Stertz said that the auxiliary emissions control software is legal in Europe, but that Audi did not "properly notify regulators" of the device.

"We are willing to take another crack at reprogramming to a degree that the regulators deem acceptable," Stertz said. The cost of reflashing the software is relatively minor, in the "double digits millions of euros," he added.

In September, VW admitted it had installed software that allowed 482,000 diesel cars with 2.0L sold in the United States since 2009 to emit up to 40 times allowable emissions by only activating emissions controls during laboratory testing.

VW faces investigations around the world, including from the U.S. Justice Department - and could face up to $18 billion in U.S. fines. The new disclosure could add another $3.2 billion in fines.

EPA's VW probe expands to 75,000 more vehicles

By Kevin Rogers

The Environmental Protection Agency and the California Air Resources Board on Friday said that their investigation into Volkswagen's emissions cheating scandal would expand to an additional 75,000 vehicles on the road.

In a Thursday meeting, officials from VW and Audi told the regulators that software the government alleges to be a "defeat device" to evade nitrogen oxide emissions testing — which VW denies — had been installed in all vehicles with six-cylinder, three-liter diesel engines from model years 2009 to 2016, not just the 10,000 originally cited by officials.

"EPA and CARB will continue to investigate and will take all appropriate action," EPA said.

Friday's announcement builds upon the allegations in a Nov. 2 Notice of Violation of the Clean Air Act that said 10,000 six-cylinder cars with model years between 2014 and 2016 included the "defeat devices."

The agencies say the software keeps the vehicles' emissions at legal levels during testing but allows the vehicles to emit up to nine times that limit while on the road.

VW Group, which includes Audi, Porsche and other luxury brands, denied wrongdoing in connection with the six-cylinder cars, describing the issue as a failure to adequately describe a software function in the company's application for certificates of conformity with Clean Air Act standards.

Audi Chief Communications Officer Jeri Ward said that the company was "continuing to cooperate" with the agencies on the investigation.

"It's not a new issue. This is part of a process. We're having an ongoing dialogue with CARB and EPA," Ward said. "We're cooperating with the regulators and having productive conversations with them."

Ward said that Audi had implemented a voluntary stop on sales of model years 2009 to 2016 as the investigation continues. She said that it affected approximately 32,000 vehicles from the 2014 to 2016 range and about 13,000 pre-owned vehicles from the 2009 to 2013 models.

The six-cylinder allegation is separate from the larger emissions cheating scandal, estimated to affect nearly 500,000 four-cylinder vehicles in the U.S. Volkswagen has admitted to installing defeat device software in 11 million vehicles worldwide, leading to the resignation of CEO Martin Winterkorn in September.

The software in those vehicles allows them to emit 40 times the legal limit of nitrogen oxide while driving. The company has set aside $7.38 billion to repair those vehicles.

EPA has not issued a recall for vehicles in either set and says they're still safe and legal to drive.

Also Friday, Volkswagen's new CEO, Matthias Müller, told a board of directors meeting in Wolfsburg, Germany that the company would cut capital investments by $1.07 billion next year in response to the emissions scandal.

"We are operating in uncertain and volatile times and are responding to this," he said in a statement following the meeting. "We will strictly prioritize all planned investments and expenditures. As announced, anything that is not absolutely necessary will be canceled or postponed."

He added that the company would boost its investment in development of alternate drive technologies by $107 million next year.

"We are not going to make the mistake of economizing on our future," he said.

Leaders of the House Energy and Commerce Committee, including Chairman Rep. Fred Upton, R-Mich., and ranking member Rep. Frank Pallone, D-N.J., said the new revelations would be included in their ongoing probe of the scandal.

"Today's announcement adds to the growing list of troubling questions for Volkswagen and we need answers," they said. "Our investigation continues."

Colorado area open to Superfund cleanup after mine spill

By Dan Elliott

DENVER (AP) — Southwestern Colorado officials said Friday that they are ready to talk to the Environmental Protection Agency about a federally financed Superfund cleanup of inactive mines, including one that spewed millions of gallons of wastewater and polluted rivers in three states this summer.

It would be an important step toward cleaning up hundreds of idle mines that have been pouring acidic wastewater into the Animas River north of Silverton for years. No laws required mine operators to mitigate environmental damage, and in many cases, the owners simply walked away when mining ceased.

"It's a direction we're heading in," San Juan County Administrator Willie Tookey said of a Superfund designation.

Some residents of the tourism-dependent community are wary of a Superfund listing, fearing it could discourage visitors, depress property values and take years to resolve. But the Aug. 5 spill at the Gold King Mine increased pressure to act.

Judge denies Washington kids' petition on climate change

By Phuong Le

SEATTLE (AP) — A judge has denied an appeal by eight young activists who petitioned Washington state to adopt stricter science-based regulations to protect them against climate change.

King County Superior Court Judge Hollis Hill affirmed some of the children's arguments, saying the state has a duty to protect natural resources for future generations. But she said the Washington Department of Ecology is already working on meeting that obligation by writing new rules for greenhouse gas emissions ordered by the governor.

Climate activists, ages 10 to 15, in Seattle brought the lawsuit asking the court to force state officials to adopt new rules to limit carbon emissions based on the best available science. The case is part of a nationwide effort led by the Oregon-based nonprofit Our Children's Trust to force states and the federal government to take action on climate change.

The judge noted in her ruling Thursday that the Ecology Department is taking science into account, along with economic, social and political considerations. She also said the court can't dictate how officials develop the rules.

As jury deliberates, judge says no mistrial for ex-coal CEO

By Jonathan Matisse

CHARLESTON, W.Va. (AP) — As a jury deliberated for a third full day in the criminal trial of in ex-Massey Energy CEO Don Blankenship, the judge turned down a motion for a mistrial.

Jurors have been trying since Tuesday evening to reach a decision. Blankenship is charged with conspiring to break safety laws at the Upper Big Branch coal mine and defraud mine regulators in the years before an explosion killed 29 men at the mine in southern West Virginia in 2010. He's also accused of lying to financial regulators and investors about company safety.

On Friday, Defense attorney William Taylor told U.S. District Judge Irene Berger that because many jurors face a round trip to court of two hours or longer and they want to be sure they are home for Thanksgiving, they would be coerced into reaching a verdict.

Berger denied the motion and said jurors may have Wednesday, Thursday and Friday off next week.

Shrinking Amazon forests may lose thousands of trees species

By Seth Borenstein

WASHINGTON (AP) — A first-of-its-kind examination of the Amazon's trees found that as many as half the species may be threatened with extinction or heading that way because of massive deforestation. Among the more than 5,000 tree species in deep trouble: the ones that produce Brazil nuts and mahogany.

An international team of 158 scientists found that depending on the degree to which deforestation comes under control in the next 35 years, between 36 and 57 percent of the 16,000 tree species in the tropical rainforest area would be considered threatened. Their study is published in Friday's edition of Science Advances.

The range rests on whether cutting down the region's forest continues at the rate of the late 20th and early 21st centuries or slows down to lesser levels proposed in 2006, study authors said. If deforestation continues at the same pace, nearly 8,700 tree types are in trouble, but the number of species at risk could be as low as 5,500 if nations are able to cut back as planned, said study co-author Nigel Pitman from the Field Museum in Chicago.

"We've never had a good idea of how many species are threatened in the Amazon," Pitman said Friday. "Now with this study, we have an estimate."

Airstrikes hurt, but don't halt, IS oil smuggling operations

By Zeina Karam and Susannah George

BEIRUT (AP) — The United States and Russia are going after the Islamic State group's oil industry, destroying refineries and hundreds of tanker trucks transporting oil from eastern Syria in a heavy bombardment in recent days aiming to break the extremists' biggest source of income.

The campaign already appears to be having some effect, with oil prices rising in areas of Syria that rely on crude smuggled out of IS areas. But experts say it will be difficult to cut off the militants' trade completely since they are likely to switch to smaller, more elusive vehicles.

Putting a total end to the industry would mean destroying the oil fields in Syria, but that would also bring hardship to millions in the population under IS rule and others who depend on the group's oil, causing fuel shortages as winter sets in. Otherwise, taking the fields would require ground forces.

Still, the campaign could hit hard on an industry that U.S. officials say generates more than half the revenue the Islamic State group uses to maintain its rule over its swath of territory across Syria and Iraq and pay its fighters.

Tesla recalling all Model S sedans for seat belt issue

By Dee-Ann Durbin

DETROIT (AP) — Tesla Motors is recalling its entire fleet of Model S sedans to check their front seat belts after one passenger's seat belt became disconnected.

The recall — the company's largest ever — involves 90,000 cars worldwide. Tesla sent an email Friday to affected customers.

Tesla's other vehicles, the Model X SUV and the Roadster, aren't affected. Seat belts in the back seat of the Model S also aren't affected.

About two weeks ago, Tesla said, a customer in Europe reported that her seat belt disconnected when she turned to talk to rear passengers. The woman was not injured and her car has been repaired.

Greenpeace: Indian court stays order canceling work permit

By Muneeza Naqvi

NEW DELHI (AP) — Greenpeace India said Friday that a court has put on hold a government order canceling its registration to operate in India.

The court ruled that the environmental group could continue to operate in the country until a final verdict is reached on charges of financial irregularities that the government has leveled against it, said Hozefa Merchant, a campaigner with the group.

In April the government suspended Greenpeace India's registration for six months, saying it was underreporting foreign contributions and using them without government clearance. Greenpeace challenged the order in court.

However, earlier this month Tamil Nadu state, where the group was registered, canceled the permit. The organization said the cancellation came on orders of India's home ministry. The home ministry did not comment on the group's claim.

Colorado area open to Superfund cleanup after mine spill

By Dan Elliott

DENVER (AP) — Southwestern Colorado officials said Friday that they are ready to talk to the Environmental Protection Agency about a federally financed Superfund cleanup of inactive mines, including one that spewed millions of gallons of wastewater and polluted rivers in three states this summer.

It would be an important step toward cleaning up hundreds of idle mines that have been pouring acidic wastewater into the Animas River north of Silverton for years. No laws required mine operators to mitigate environmental damage, and in many cases, the owners simply walked away when mining ceased.

"It's a direction we're heading in," San Juan County Administrator Willie Tookey said of a Superfund designation.

Some residents of the tourism-dependent community are wary of a Superfund listing, fearing it could discourage visitors, depress property values and take years to resolve. But the Aug. 5 spill at the Gold King Mine increased pressure to act.

Judge denies Washington kids' petition on climate change

By Phuong Le

SEATTLE (AP) — A judge has denied an appeal by eight young activists who petitioned Washington state to adopt stricter science-based regulations to protect them against climate change.

King County Superior Court Judge Hollis Hill affirmed some of the children's arguments, saying the state has a duty to protect natural resources for future generations. But she said the Washington Department of Ecology is already working on meeting that obligation by writing new rules for greenhouse gas emissions ordered by the governor.

Climate activists, ages 10 to 15, in Seattle brought the lawsuit asking the court to force state officials to adopt new rules to limit carbon emissions based on the best available science. The case is part of a nationwide effort led by the Oregon-based nonprofit Our Children's Trust to force states and the federal government to take action on climate change.

The judge noted in her ruling Thursday that the Ecology Department is taking science into account, along with economic, social and political considerations. She also said the court can't dictate how officials develop the rules.

As jury deliberates, judge says no mistrial for ex-coal CEO

By Jonathan Matisse

CHARLESTON, W.Va. (AP) — As a jury deliberated for a third full day in the criminal trial of in ex-Massey Energy CEO Don Blankenship, the judge turned down a motion for a mistrial.

Jurors have been trying since Tuesday evening to reach a decision. Blankenship is charged with conspiring to break safety laws at the Upper Big Branch coal mine and defraud mine regulators in the years before an explosion killed 29 men at the mine in southern West Virginia in 2010. He's also accused of lying to financial regulators and investors about company safety.

On Friday, Defense attorney William Taylor told U.S. District Judge Irene Berger that because many jurors face a round trip to court of two hours or longer and they want to be sure they are home for Thanksgiving, they would be coerced into reaching a verdict.

Berger denied the motion and said jurors may have Wednesday, Thursday and Friday off next week.

Shrinking Amazon forests may lose thousands of trees species

By Seth Borenstein

WASHINGTON (AP) — A first-of-its-kind examination of the Amazon's trees found that as many as half the species may be threatened with extinction or heading that way because of massive deforestation. Among the more than 5,000 tree species in deep trouble: the ones that produce Brazil nuts and mahogany.

An international team of 158 scientists found that depending on the degree to which deforestation comes under control in the next 35 years, between 36 and 57 percent of the 16,000 tree species in the tropical rainforest area would be considered threatened. Their study is published in Friday's edition of Science Advances.

The range rests on whether cutting down the region's forest continues at the rate of the late 20th and early 21st centuries or slows down to lesser levels proposed in 2006, study authors said. If deforestation continues at the same pace, nearly 8,700 tree types are in trouble, but the number of species at risk could be as low as 5,500 if nations are able to cut back as planned, said study co-author Nigel Pitman from the Field Museum in Chicago.

"We've never had a good idea of how many species are threatened in the Amazon," Pitman said Friday. "Now with this study, we have an estimate."

Airstrikes hurt, but don't halt, IS oil smuggling operations

By Zeina Karam and Susannah George

BEIRUT (AP) — The United States and Russia are going after the Islamic State group's oil industry, destroying refineries and hundreds of tanker trucks transporting oil from eastern Syria in a heavy bombardment in recent days aiming to break the extremists' biggest source of income.

The campaign already appears to be having some effect, with oil prices rising in areas of Syria that rely on crude smuggled out of IS areas. But experts say it will be difficult to cut off the militants' trade completely since they are likely to switch to smaller, more elusive vehicles.

Putting a total end to the industry would mean destroying the oil fields in Syria, but that would also bring hardship to millions in the population under IS rule and others who depend on the group's oil, causing fuel shortages as winter sets in. Otherwise, taking the fields would require ground forces.

Still, the campaign could hit hard on an industry that U.S. officials say generates more than half the revenue the Islamic State group uses to maintain its rule over its swath of territory across Syria and Iraq and pay its fighters.

Tesla recalling all Model S sedans for seat belt issue

By Dee-Ann Durbin

DETROIT (AP) — Tesla Motors is recalling its entire fleet of Model S sedans to check their front seat belts after one passenger's seat belt became disconnected.

The recall — the company's largest ever — involves 90,000 cars worldwide. Tesla sent an email Friday to affected customers.

Tesla's other vehicles, the Model X SUV and the Roadster, aren't affected. Seat belts in the back seat of the Model S also aren't affected.

About two weeks ago, Tesla said, a customer in Europe reported that her seat belt disconnected when she turned to talk to rear passengers. The woman was not injured and her car has been repaired.

Carson, Rubio, O'Malley among Sunday TV news show guests

By The Associated Press

WASHINGTON (AP) — Guest lineups for the Sunday TV news shows:

- ABC's "This Week" — Republican presidential candidate Ben Carson; Democratic presidential candidate Martin O'Malley.
- NBC's "Meet the Press" — Republican presidential candidate John Kasich; former Defense Secretary Leon Panetta.
- CBS' "Face the Nation" — Republican presidential candidate Rand Paul; Sen. Dianne

Feinstein, D-Calif.; Rep. Michael McCaul, R-Texas; Brett McGurk, presidential envoy for the global coalition to counter the Islamic State group.

- CNN's "State of the Union" — Reps. Devin Nunes, R-Calif., and Marsha Blackburn, R-Tenn.
- "Fox News Sunday" — Republican presidential candidate Marco Rubio.

Greenpeace: Indian court stays order canceling work permit

By Muneeza Naqvi

NEW DELHI (AP) — Greenpeace India said Friday that a court has put on hold a government order canceling its registration to operate in India.

The court ruled that the environmental group could continue to operate in the country until a final verdict is reached on charges of financial irregularities that the government has leveled against it, said Hozefa Merchant, a campaigner with the group.

In April the government suspended Greenpeace India's registration for six months, saying it was underreporting foreign contributions and using them without government clearance. Greenpeace challenged the order in court.

However, earlier this month Tamil Nadu state, where the group was registered, canceled the permit. The organization said the cancellation came on orders of India's home ministry. The home ministry did not comment on the group's claim.

Re: Notice of Clean Air Act Violations Pursuant to 42 U.S.C. § 7604(b)(1)(A)

Ladies and Gentlemen,

We represent Rich Hill, Elvis Foster, Robert Nesbitt, Joe Howbert, Callum Dorey, Don Cunningham, Angelyen Wood, Marcia Andru Moshe, Edmund Steppan, Mireya Perez, Kristen Van de Biezenbos, Ann Marie Stief, William Stief, Thomas C. Jorgensen, Kartik Pillutla, Kathryn Sue Vordenberg, Michael Brown, Carol Spindel, Jason Welch, Thomas Bassett, Joshua R. Geller, Michelle Geller, Fred M. Flores, Gary Butterwei, Terri Butterwei, Thomas Michael Carran, Michael Fuerstein, Grant Garcia, Howard Katz, Timothy P. Yerkes, Beth Glassman, Stephanie Waddoups, Mary Jones, Diego Alberto Diaz, Michael Santos, Mark Pomerantz, and Tiffany Ford, individually and on behalf of all others similarly situated (collectively, "Plaintiffs"), and write to provide notice of violations of the Clean Air Act ("CAA") by Volkswagen AG, Audi AG, Porsche AG, Volkswagen Group of America, Inc., and Porsche Cars North America, Inc., (collectively, "VW") to the Administrator of the EPA, to the States in which the violation occurs (in this case, all fifty States and the District of Columbia), and to the alleged violators of the CAA. This is notice is pursuant to 42 U.S.C. § 7604(b)(1)(A), and is made 60 days before Plaintiffs commence a civil action against VW to enforce the applicable emission standards or limitations and to recover civil penalties, costs of litigation (including reasonable attorney and expert witness fees), and all other relief that is proper in citizen suits under the CAA.

The allegations in this notice are based on the Notices of Violation issued by the United States Environmental Protection Agency ("EPA") on September 18, 2015 and November 2, 2015. As stated therein, the EPA has investigated and continues to investigate Volkswagen AG, Audi AG, Porsche AG, Volkswagen Group of America, Inc., and Porsche Cars North America, Inc., (collectively, "VW") for compliance with the CAA, 42 U.S.C. §§ 7401-7671q, and its implementing regulations. The EPA has determined that VW manufactured and installed defeat devices in certain model year 2009 through 2015 diesel light-duty vehicles equipped with 2.0 liter engines, and certain model year 2014 through 2016 diesel light-duty vehicles equipped with 3.0 liter engines. These defeat devices bypass, defeat, or render inoperative elements of the vehicles' emission control system that exist to comply with CAA emission standards. Therefore, VW violated section 203(a)(3)(B) of the CAA, 42 U.S.C. § 7522(a)(3)(B). Additionally, the EPA has determined that, due to the existence of the defeat devices in these vehicles, these vehicles do not conform in all material respects to the vehicle specifications described in the applications for the certificates of conformity that

VW FOIA, EPA 06/20/2017 2017-FFP_036218

purportedly cover them. Therefore, VW also violated section 203(a)(l) of the CAA, 42 U.S.C. § 7522(a)(l), by selling, offering for sale, introducing into commerce, delivering for introduction into commerce, or importing these vehicles, or for causing any of the foregoing acts.

Law Governing Alleged Violations

This notice arises under Part A of Title II of the CAA, 42 U.S.C. §§ 7521-7554, and the regulations promulgated thereunder. In creating the CAA, Congress found, in part, that "the increasing use of motor vehicles . . . has resulted in mounting dangers to the public health and welfare." CAA § 101(a)(2), 42 U.S.C. § 7401(a)(2). Congress' purpose in creating the CAA, in part, was "to protect and enhance the quality of the Nation's air resources so as to promote the public health and welfare and the productive capacity of its population," and "to initiate and accelerate a national research and development program to achieve the prevention and control of air pollution." CAA § 101(b)(l)-(2), 42 U.S.C. § 740 l (b)(l)-(2). The CAA and the regulations promulgated thereunder aim to protect human health and the environment by reducing emissions of nitrogen oxides (NOx) and other pollutants from mobile sources of air pollution. Nitrogen oxides are a family of highly reactive gases that play a major role in the atmospheric reactions with volatile organic compounds (VOCs) that produce ozone (smog) on hot summer days. Breathing ozone can trigger a variety of health problems including chest pain, coughing, throat irritation, and congestion. Breathing ozone can also worsen bronchitis, emphysema, and asthma. Children are at greatest risk of experiencing negative health impacts from exposure to ozone.

The allegations here concern light-duty motor vehicles for which 40 C.F.R. Part 86 sets emission standards and test procedures and section 203 of the CAA, 42 U.S.C. § 7522, sets compliance provisions. Light-duty vehicles must satisfy emission standards for certain air pollutants, including NOx. 40 C.F.R. § 86.1811-04. The EPA administers a certification program to ensure that every vehicle introduced into United States commerce satisfies applicable emission standards. Under this program, the EPA issues certificates of conformity (COCs), and thereby approves the introduction of vehicles into United States commerce.

To obtain a COC, a light-duty vehicle manufacturer must submit a COC application to the EPA for each test group of vehicles that it intends to enter into United States commerce. 40 C.F.R. § 86.1843-01. The COC application must include, among other things, a list of all auxiliary emission control devices (AECDs) installed on the vehicles. 40 C.F.R. § 86.1844-0l(d)(11). An AECD is "any element of design which senses temperature, vehicle speed, engine RPM, transmission gear, manifold vacuum, or any other parameter for the purpose of

VW FOIA, EPA 06/20/2017 2017-FFP_036219

activating, modulating, delaying, or deactivating the operation of any part of the emission control system." 40 C.F.R. § 86.1803-01. The COC application must also include "a justification for each AECD, the parameters they sense and control, a detailed justification of each AECD that results in a reduction in effectiveness of the emission control system, and [a] rationale for why it is not a defeat device." 40 C.F.R. § 86.1844-01(d)(11).

A defeat device is an AECD that reduces the effectiveness of the emission control system under conditions which may reasonably be expected to be encountered in normal vehicle operation and use, unless: (1) such conditions are substantially included in the Federal emission test procedure; (2) the need for the AECD is justified in terms of protecting the vehicle against damage or accident; (3) the AECD does not go beyond the requirements of engine starting; or (4) The AECD applies only for emergency vehicles . . . ." 40 C.F.R. § 86.1803-01.

Motor vehicles equipped with defeat devices, such as those at issue here, cannot be certified. EPA, *Advisory Circular Number 24: Prohibition on use of Emission Control Defeat Device* (Dec. 11, 1972); *see also* 40 C.F.R. §§ 86-1809-01, 86-1809-10, 86-1809-12. Electronic control systems which may receive inputs from multiple sensors and control multiple actuators that affect the emission control systems performance are AECDs. EPA, *Advisory Circular Number 24-2: Prohibition of Emission Control Defeat Devices - Optional Objective Criteria* (Dec. 6, 1978). "Such elements of design could be control system logic (i.e., computer software), and/or calibrations, and/or hardware items." *Id.*

"Vehicles are covered by a certificate of conformity only if they are in all material respects as described in the manufacturer's application for certification . . . ." 40 C.F.R. § 86.1848-10(c)(6). Similarly, a COC issued by EPA, including those issued to VW, state expressly, "[t]his certificate covers only those new motor vehicles or vehicle engines which conform, in all material respects, to the design specifications" described in the application for that COC. *See also* 40 C.F.R. §§ 86.1844-01 (listing required content for COC applications), 86.1848-01(b) (authorizing the EPA to issue COCs on any terms that are necessary or appropriate to assure that new motor vehicles satisfy the requirements of the CAA and its regulations).

The CAA makes it a violation "for any person to manufacture or sell, or offer to sell, or install, any part or component intended for use with, or as part of, any motor vehicle or motor vehicle engine, where a principal effect of the part or component is to bypass, defeat, or render inoperative any device or element of design installed on or in a motor vehicle or motor vehicle engine in compliance with regulations under this subchapter, and where the person knows or should

VW FOIA, EPA 06/20/2017 2017-FFP_036220

know that such part or component is being offered for sale or installed for such use or put to such use."' CAA § 203(a)(3)(B), 42 U.S.C. § 7522(a)(3)(B); 40 C.F.R. § 86. 1854-12(a)(3)(ii). Additionally, manufacturers are prohibited from selling, offering for sale, introducing into commerce, delivering for introduction into commerce, or importing, any new motor vehicle unless that vehicle is covered by an EPA-issued COC. CAA § 203(a)(l), 42 U.S.C. § 7522(a)(l); 40 C.F.R. § 86.1854-1 2(a)(l). It is also a violation to cause any of the foregoing acts. CAA § 203(a), 42 U.S.C. § 7522(a); 40 C.F.R. § 86-1854-12(a).

2.0 Liter Diesel Engines

Each VW vehicle identified by the table below has AECDs that were not described in the application for the COC that purportedly covers the vehicle. Specifically, VW manufactured and installed software in the electronic control module (ECM) of these vehicles that sensed when the vehicle was being tested for compliance with EPA emission standards. The EPA calls this the "switch." The "switch" senses whether the vehicle is being tested or not based on various inputs including the position of the steering wheel, vehicle speed, the duration of the engine's operation, and barometric pressure. These inputs precisely track the parameters of the federal test procedure used for emission testing for EPA certification purposes. During EPA emission testing, the vehicles' ECM ran software which produced compliant emission results under an ECM calibration that VW referred to as the "dyno calibration" (referring to the equipment used in emissions testing, called a dynamometer). At all other times during normal vehicle operation, the "switch", was activated and the vehicle ECM software ran a separate "road calibration" which reduced the effectiveness of the emission control system (specifically the selective catalytic reduction or the lean Ox trap). As a result, emissions of Ox increased by a factor of 10 to 40 times above the EPA compliant levels, depending on the type of drive cycle (e.g., city, highway).

The California Air Resources Board (CARB) and the EPA were alerted to emissions problems with these vehicles in May 2014 when the West Virginia University's (WVU) Center for Alternative Fuels, Engines & Emissions published results of a study commissioned by the International Council on Clean Transportation that found significantly higher in-use emissions from two light duty diesel vehicles (a 2012 Jetta and a 2013 Passat). Over the course of the year following the publication of the WVU study, VW continued to assert to CARB and the EPA that the increased emissions from these vehicles could be attributed to various technical issues and unexpected in-use conditions. VW issued a voluntary recall in December 2014 to address the issue. CARB, in coordination with the EPA, conducted follow up testing of these vehicles both in the laboratory and during normal road operation to confirm the efficacy of the recall. When the

VW FOIA, EPA 06/20/2017 2017-FFP_036221

testing showed only a limited benefit to the recall, CARB broadened the testing to pinpoint the exact technical nature of the vehicles' poor performance, and to investigate why the vehicles' on board diagnostic system was not detecting the increased emissions. None of the potential technical issues suggested by VW explained the higher test results consistently confirmed during CARB's testing. It became clear that CARB and the EPA would not approve certificates of conformity for VW's 2016 model year diesel vehicles until VW could adequately explain the anomalous emissions and ensure the agencies that the 20 16 model year vehicles would not have similar issues. Only then did VW admit it had designed and installed a defeat device in these vehicles in the form of a sophisticated software algorithm that detected when a vehicle was undergoing emissions testing.

VW knew or should have known that its "road calibration" and "switch" together bypass, defeat, or render inoperative elements of the vehicle design related to compliance with the CAA emission standards. This is apparent given the design of these defeat devices. As described above, the software was designed to track the parameters of the federal test procedure and cause emission control systems to underperform when the software determined that the vehicle was not undergoing the federal test procedure.

VW's "road calibration" and "switch" are AECDs that were neither described nor justified in the applicable COC applications, and are illegal defeat devices. Therefore each vehicle identified by the table below does not conform in a material respect to the vehicle specifications described in the COC application. As such, VW violated section 203(a)(l) of the CAA, 42 U.S.C. § 7522(a)(l), each time it sold, offered for sale, introduced into commerce, de livered for introduction into commerce, or imported (or caused any of the foregoing with respect to) one of the hundreds of thousands of new motor vehicles within these test groups. Additionally, VW violated section 203(a)(3)(B) of the CAA, 42 U.S.C. § 7522(a)(3)(B), each time it manufactured and installed into these vehicles an ECM equipped with the "switch" and " road calibration."

The vehicles are identified by the table below. All vehicles are equipped with 2.0 liter diesel engines.

Model Year	EPA Test Group	Make and Model(s)
2009	9VWXV02.035N	VW Jetta, VW Jetta Sportwagen
2009	9VWXV02.0U5N	VW Jetta, VW Jetta Sportwagen
2010	AVWXV02.0U5N	VW Golf, VW Jetta, VW Jetta Sportwagen,

3.0 Liter Diesel Engines

Each VW vehicle identified by the table below has AECDs that were not described in the application for the COC that purportedly covers the vehicle. Specifically, VW manufactured and installed software in the electronic control module (ECM) of each vehicle that causes the vehicle to perform differently when the vehicle is being tested for compliance with EPA emission standards than in normal operation and use.

When this software determines the vehicle has begun the FTP 75 Federal emission test procedure, it directs the vehicle to employ a low NOx temperature conditioning mode. A status bit in the software indicates that a "temperature conditioning" mode is active. In this low NOx temperature conditioning mode, the vehicle operates under a number of emission control parameters, including injection timing, exhaust gas recirculation rate, and common rail fuel pressure in such a way that the parameters yield low engine-out NOx emissions and high exhaust temperatures. The high exhaust temperatures heat the selective catalytic reduction system ("catalyst") and improve the catalyst's ability to reduce tailpipe NOx emissions. In this low NOx temperature conditioning mode, the combination of low engine-out NOx and improved catalyst performance results in tailpipe NOx emissions that are below the applicable emissions standard.

VW FOIA, EPA 06/20/2017 2017-FFP_036223

However, the software employs a "timer" that coincides with the low NOx temperature conditioning mode. At exactly one second after the completion of the initial phases of the FTP 75 Federal emissions test procedure (1,370 seconds, which is when the vehicle would normally be turned off), this software directs the vehicle to cease low NOx temperature conditioning mode. The "temperature conditioning" status bit switches to zero, and a second status bit indicates the activation of "transition to normal mode." In this "normal mode," the emission control system is immediately less effective. Compared to the low NOx temperature conditioning mode, the vehicle employs a different injection timing, exhaust gas recirculation rate, and common rail fuel pressure. This yields higher levels of NOx from the engine and reduced exhaust temperatures.

In addition, when the vehicle starts under conditions that the software determines *are not* the beginning of the FTP 75 Federal emission test procedure, the vehicle does not use the low NOx temperature conditioning mode at all. Instead, the emission control parameters are set consistent with the "normal mode." In sum, as soon as the vehicle senses that it is not being tested, it uses "normal mode." In "normal mode," tailpipe emissions of NOx are up to 9 times the applicable NOx standard levels, depending on model type and type of drive cycle (e.g., city, highway).

This notice is based on vehicle emission testing performed by the EPA's National Vehicle and Fuel Emissions Laboratory, California Air Resources Board's Hagen-Smit Laboratory, and Environment Canada's River Road Laboratory. This testing was performed since EPA's announcement on September 25, 2015, that it would perform additional testing "using driving cycles and conditions that may reasonably be expected to be encountered in normal operation and use, for the purposes of investigating a potential defeat device." EPA, *EPA Conducted Confirmatory Testing* (Sept. 25, 2015).

VW knew or should have known that the software described above bypasses, defeats, or renders inoperative elements of the vehicle design related to compliance with the CAA emission standards. This is apparent given the design of these defeat devices. As described above, the software was designed to track federal test procedures and cause emission control systems to underperform when the software determined that the vehicle was not being tested.

VW's software described above includes one or more AECDs that were neither described nor justified in the applicable COC applications, and are illegal defeat devices. Therefore each vehicle identified by the table below does not conform in a material respect to the vehicle specifications described in the COC application. As such, VW violated section 203(a)(1) of the CAA, 42 U.S.C. § 7522(a)(1), each

VW FOIA, EPA 06/20/2017 2017-FFP_036224

time it sold, offered for sale, introduced into commerce, delivered for introduction into commerce, or imported (or caused any of the foregoing with respect to) one of the new motor vehicles within these test groups. Additionally, VW violated section 203(a)(3)(B) of the CAA, 42 U.S.C. § 7522(a)(3)(B), each time it manufactured and installed into these vehicles an ECM equipped with the software described above. The vehicles are identified by the table below. All vehicles are equipped with 3.0 liter diesel engines.

Model Year	EPA Test Group	Make and Model(s)
2014	EADXT03.02UG	VW Touareg
2015	FPRXT03.0CDD	Porsche Cayenne
2016	GVGAJ03.0NU4	Audi A6 Quattro, A 7 Quattro, A8, A8L, and Q5

Citizen Enforcement

The investigation into this matter is continuing. The above tables represent specific violations that the EPA and Plaintiffs believe, at this point, are sufficiently supported by evidence to warrant the allegations in this notice. The EPA and Plaintiffs may find additional violations as the investigation continues, including violations related to carbon dioxide emissions from diesel and gasoline-power VW vehicles, as indicated by VW's public announcement on November 3, 2015.

Not less than 60 days following this notice, Plaintiffs may commence a civil action pursuant to 42 U.S.C. §7604, which provides that the district courts of the United States have jurisdiction to enforce emission standards or limitations, to apply any appropriate civil penalties, and to award costs of litigation (including reasonable attorney and expert witness fees) to any party.

Sincerely,

Robert S. Safi

Obama lays out Paris agenda, calls climate talks a 'rebuke' to terror

By Kevin Rogers

When President Barack Obama heads to Paris for United Nations-sponsored climate talks next week, he'll prioritize meetings with India, China and island nations — and seek to send a "powerful rebuke" to terrorist groups that the attack in the French capital won't stop world leaders from meeting there or reaching a strong deal to cut global emissions.

Obama's remarks, at a White House press conference with French President Francois

Hollande, came shortly before his administration unveiled his schedule for the negotiations and his priorities for the visit.

"Next week, I will be joining President Hollande and world leaders in Paris for the global climate conference," Obama said. "What a powerful rebuke to the terrorists it will be when the world stands as one and we won't be deterred from building a better future for our children."

Hollande said he couldn't imagine a "better symbol" against terrorism than to hold the conference in Paris. The Nov. 13 attacks, for which the Islamic State group claimed responsibility, killed 130 people.

The talks, which kick off Monday and are scheduled to run through Dec. 11, will seek to reach a deal that cuts emissions enough to prevent global temperatures from rising 2 degrees Celsius above pre-industrial levels — the point where scientists warn that the worst impacts of climate change could become irreversible.

Commitments submitted in advance by 170 nations are thought to be enough to keep temperatures rising 2.7 degrees by the end of the century — leaving negotiators with more than .7 to make up.

Obama will be in Paris next Monday and Tuesday, administration officials told reporters. He'll hold bilateral meetings with President Xi Jinping of China and Prime Minister Narendra Modi of India.

On Tuesday, he'll hold a meeting with leaders from a coalition of island states to discuss climate finance and the role of the Green Climate Fund in helping vulnerable countries reduce greenhouse gas emissions, transition to clean energy sources, and respond to the effects of climate change.

Ben Rhodes, deputy national security adviser for strategic communications, said the meetings were aimed at building enough support to produce a deal over the two weeks of negotiations, even if Obama only attends for two days.

"By attending the summit, but also by meeting with two of the most important parties, India and China, and by convening the island nations to elevate the stakes, the president intends to generate momentum toward a successful outcome while leaving behind a significant number of his senior officials to participate in the ongoing negotiations," Rhodes said.

Obama is also slated to speak at a meeting of world leaders and have dinner with Hollande on Monday, and plans to hold a news conference before leaving Paris on Tuesday.

Secretary of State John Kerry, Interior Secretary Sally Jewell, Energy Secretary Ernest Moniz, Agriculture Secretary Tom Vilsack, Environmental Protection Agency Administrator Gina McCarthy, and Kathryn Sullivan, administrator of the National Oceanic and Atmospheric Administration, are set to attend over the course of the negotiations.

Paul Bodnar, National Security Council senior director for energy and climate change, told reporters Tuesday that the administration would push for an extended framework for climate action, not a "stop-gap."

"Our task in Paris is to secure a long-term framework in which countries set successive rounds of targets in the future beyond 2030 and ratchet down their emissions over the course of the coming decade," Bodnar said.

The announcements came as Republicans and other opponents of the administration's goals in Paris laid out new attacks on U.S. commitments, including the $3 billion pledge to the Green Climate Fund.

Congressional Republicans hope to use their control over the funding as leverage to force Obama to submit any Paris deal to lawmakers for their approval, believing that the funds are the only thing bringing developing nations to the table. In a Monday letter, 110 House Republicans, led by Rep. Morgan Griffith, R-Va., urged House Appropriations Chairman Rep. Hal Rogers, R-Ky., to block any financing unless the Senate is allowed to vote on the final deal.

"As stewards of taxpayer dollars, and in light of our substantial budget priorities, we cannot support this request for the Green Climate Fund, especially if the terms and conditions to pay such funds are not brought before Congress for approval as required by the U.S. Constitution," they wrote.

Senate Republicans have made similar threats.

Bodnar wouldn't say if Obama would veto an omnibus funding bill, due by Dec. 11, that doesn't include the $500 million he requested for the fund this year.

"There are many administration priorities we're monitoring as Congress continues to work on this bill, and we don't want to get too far ahead of the negotiations as they move forward," he said. "But it is clearly a priority for the president."

Separately, West Virginia Attorney General Patrick Morrisey and Texas Attorney General Ken Paxton, who are leading a legal challenge to EPA's Clean Power Plan, urged Kerry to tell world leaders that the administration's climate policies are opposed by 27 states and won't withstand legal scrutiny. Their lawsuit says the rule for existing power plants infringes on their authority, since it requires states to hit carbon-reduction targets through a blend of using natural gas and renewable energy, rather than simply setting a hard limit on power plant emissions.

"These serious legal questions are of great importance to the states, which under our constitutional system 'possess sovereignty concurrent with that of the federal government, subject only to limitations imposed by the supremacy clause,'" they said in a letter to Kerry. "We expect our federal representatives to respect that system of dual sovereignty both here at

home and in negotiations abroad."

The State Department did not comment on the letter.

The lawsuit against the power plant carbon rules is under review by the U.S. District Court of Appeals for the District of Columbia Circuit, though judges said they won't move on a requested stay of the regulations before Dec. 23.

Utility plans to mask awful odor from uncontrolled gas leak

By Brian Melley

LOS ANGELES (AP) — A utility company trying to stop a massive month-long natural gas leak says it intends to use a solution to mask the stench that is making residents ill in an area of Los Angeles.

Southern California Gas Co. officials told county supervisors Tuesday the substance is safe and would neutralize the rotten-egg smell that has led to more than 660 complaints to the air board.

Porter Ranch residents say they have concerns about the use of Odex, a biodegradable solution made from food-grade products.

Matt Pakucko says the community doesn't want to be guinea pigs in an experiment about whether the substance is safe.

More

Colorado town to pursue Superfund help after mine spill

By The Associated Press

DURANGO, Colo. (AP) — Southwestern Colorado officials will negotiate with state and federal agencies to set up a federally financed Superfund cleanup of inactive mines, including one that spewed millions of gallons of wastewater into rivers in three states in August.

Silverton and San Juan County leaders voted unanimously Monday to direct city staff members to pursue a Superfund designation with the Environmental Protection Agency and the Colorado Department of Public Health and Environment.

The tourism-dependent community has been wary of seeking a Superfund designation for nearly two decades, fearing stigma and red tape. Officials say a tour of four Superfund sites this month changed their minds, showing them that the process could be difficult but successful.

Silverton Mayor Chris Tookey told The Durango Herald it appears that route would provide the most comprehensive cleanup in the shortest amount of time.

Thanksgiving travel 2015: Cheap gas but fears of terrorism

By Justin Pritchard

LOS ANGELES (AP) — That other Thanksgiving tradition — congested highways and jammed airports — is getting underway with gas prices low and terrorism fears high.

An estimated 46.9 million Americans are expected to take a car, plane, bus or train at least 50 miles from home over the long holiday weekend, according to the motoring organization AAA. That would be an increase of more than 300,000 people over last year, and the most travelers since 2007.

Among the reasons given for the increase: an improving economy and the cheapest gasoline for this time of year since 2008.

On Tuesday, some travelers were gearing up for an early exit.

Thanksgiving holiday publishing schedule for EnergyGuardian

By EnergyGuardian

As is tradition during the Thanksgiving holiday week, EnergyGuardian will publish a single midday edition on Wednesday and will not publish its normal newsletters on Thursday or Friday this week. Of course, we'll cover any breaking news with alerts, and then resume normal publishing on Monday morning. We wish you and your family the happiest of Thanksgivings and thank you for your support all year long.

Long-awaited New England transmission request boosts regional energy

By Wilson Ring

MONTPELIER, Vt. (AP) — Companies designing projects to bring clean electricity to southern New England say they're grateful Massachusetts, Connecticut and Rhode Island have finally made a request for proposals to carry that power to the region.

But meeting the region's longer-term goal of expanding the use of renewable electricity from wind, solar and hydro-electricity will require more transmission capacity than the states requested, said Edward Krapels, the CEO of Anbaric Transmission, which is proposing one project in Maine and another Vermont.

"Having several states work together is just very constructive and allows larger scale renewable projects to get built, and we like that," Krapels said Tuesday.

The southern New England states are looking for clean renewable energy as part of a broader effort to reduce electricity costs and provide reliable sources of power as other aging power plants go offline. The region's governors committed to working together in 2013.

Better batteries to beat global warming: A race against time

By Seth Borenstein

WASHINGTON (AP) — One of the key technologies that could help wean the globe off fossil fuel is probably at your fingertips or in your pocket right now: the battery.

If batteries can get better, cheaper and store more power safely, then electric cars and solar- or wind- powered homes become more viable — even on cloudy days or when the wind isn't blowing. These types of technological solutions will be one of the more hopeful aspects of United Nations climate talks that begin next week in Paris.

"If you are serious about eliminating combustion of fossil fuels to power anything — a house, a city, a state — you can't do it without (energy) storage," which usually means batteries, said Carnegie Mellon University battery expert and inventor Jay Whitacre.

Former Vice President Al Gore, former U.S. Geological Survey chief (and current editor-in-chief of the journal Science) Marcia McNutt and others point to better batteries as one of the bright spots in the fight against climate change.

More

German investigation of VW expands to include tax evasion

By David Rising

BERLIN (AP) — German prosecutors said Tuesday they have widened their investigation of Volkswagen to include suspicion of tax evasion after revelations that some of its cars were emitting more carbon dioxide than officially reported.

Braunschweig prosecutor Birgit Seel told The Associated Press that the investigation was focused on five Volkswagen employees but would not release their names.

The focus of the investigation is on tax breaks Volkswagen received for producing low-polluting cars that it might not have qualified for if the emissions had been correctly reported, Seel said.

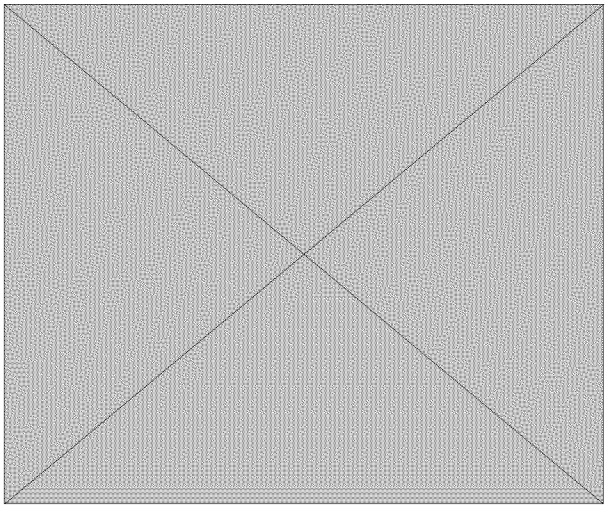
Volkswagen has acknowledged it produced 11 million vehicles worldwide with small diesel engines that contained software allowing them to cheat nitrogen oxide tests. Earlier this month, it also said it found "unexplained inconsistencies" in emissions from more of its vehicles of carbon dioxide.

More

Toxic Kenya dump embodies pope's environmental concern

By Tom Odula

NAIROBI, Kenya (AP) — Using hooks or their bare hands, men, women and children traipse through the murky sludge that pools around the mountains of garbage, hunting for bottles, plastic bags and anything else that can be recycled to earn themselves enough for their daily bread.



The scavengers at Nairobi's notorious Dandora dump are some of the poorest of Kenya's poor — and they are likely to be on Pope Francis' mind when he makes his first trip to Africa Thursday to bring his message of environmental stewardship and care for society's most marginalized. His message will take on an even more poignant ring on a continent long wracked by poverty, war and disease.

One of Francis' most anticipated speeches will be to the Nairobi-based U.N. Environment Program, which has warned that those working and living near Dandora suffer from a wide range of diseases including lung cancer, skin diseases and lead poisoning that cause stunted growth and mental disabilities in children.

Francis has denounced how the poor suffer disproportionately from environmental degradation, especially the health effects of pollution, and at UNEP he is likely to call for governments to clean up their act ahead of crucial climate negotiations opening in Paris next week. He warned in his landmark encyclical "Praise Be" that the dumping of toxic, radioactive and industrial waste risks turning Earth into "an immense pile of filth."

8 injured in fire at Mexican oil refinery

By The Associated Press

MEXICO CITY (AP) — Mexico's state-run oil company says a fire at one of its refineries has injured eight people.

Petroleos Mexicanos said in a statement that its firefighters had controlled Tuesday's blaze at the Antonio Dovali Jaime refinery in the southern state of Oaxaca. It said none of the injuries to two Pemex workers and six contractors was serious.

The company said it was investigating the cause, but that the supply of petroleum products

was guaranteed.

Obama lays out Paris agenda, calls climate talks a 'rebuke' to terror

By Kevin Rogers

When President Barack Obama heads to Paris for United Nations-sponsored climate talks next week, he'll prioritize meetings with India, China and island nations — and seek to send a "powerful rebuke" to terrorist groups that the attack in the French capital won't stop world leaders from meeting there or reaching a strong deal to cut global emissions.

Obama's remarks, at a White House press conference with French President Francois

Hollande, came shortly before his administration unveiled his schedule for the negotiations and his priorities for the visit.

"Next week, I will be joining President Hollande and world leaders in Paris for the global climate conference," Obama said. "What a powerful rebuke to the terrorists it will be when the world stands as one and we won't be deterred from building a better future for our children."

Hollande said he couldn't imagine a "better symbol" against terrorism than to hold the conference in Paris. The Nov. 13 attacks, for which the Islamic State group claimed responsibility, killed 130 people.

The talks, which kick off Monday and are scheduled to run through Dec. 11, will seek to reach a deal that cuts emissions enough to prevent global temperatures from rising 2 degrees Celsius above pre-industrial levels — the point where scientists warn that the worst impacts of climate change could become irreversible.

Commitments submitted in advance by 170 nations are thought to be enough to keep temperatures rising 2.7 degrees by the end of the century — leaving negotiators with more than .7 to make up.

Obama will be in Paris next Monday and Tuesday, administration officials told reporters. He'll hold bilateral meetings with President Xi Jinping of China and Prime Minister Narendra Modi of India.

On Tuesday, he'll hold a meeting with leaders from a coalition of island states to discuss climate finance and the role of the Green Climate Fund in helping vulnerable countries reduce greenhouse gas emissions, transition to clean energy sources, and respond to the effects of climate change.

Ben Rhodes, deputy national security adviser for strategic communications, said the meetings were aimed at building enough support to produce a deal over the two weeks of negotiations, even if Obama only attends for two days.

"By attending the summit, but also by meeting with two of the most important parties, India and China, and by convening the island nations to elevate the stakes, the president intends to generate momentum toward a successful outcome while leaving behind a significant number of his senior officials to participate in the ongoing negotiations," Rhodes said.

Obama is also slated to speak at a meeting of world leaders and have dinner with Hollande on Monday, and plans to hold a news conference before leaving Paris on Tuesday.

Secretary of State John Kerry, Interior Secretary Sally Jewell, Energy Secretary Ernest Moniz, Agriculture Secretary Tom Vilsack, Environmental Protection Agency Administrator Gina McCarthy, and Kathryn Sullivan, administrator of the National Oceanic and Atmospheric Administration, are set to attend over the course of the negotiations.

Paul Bodnar, National Security Council senior director for energy and climate change, told reporters Tuesday that the administration would push for an extended framework for climate action, not a "stop-gap."

"Our task in Paris is to secure a long-term framework in which countries set successive rounds of targets in the future beyond 2030 and ratchet down their emissions over the course of the coming decade," Bodnar said.

The announcements came as Republicans and other opponents of the administration's goals in Paris laid out new attacks on U.S. commitments, including the $3 billion pledge to the Green Climate Fund.

Congressional Republicans hope to use their control over the funding as leverage to force Obama to submit any Paris deal to lawmakers for their approval, believing that the funds are the only thing bringing developing nations to the table. In a Monday letter, 110 House Republicans, led by Rep. Morgan Griffith, R-Va., urged House Appropriations Chairman Rep. Hal Rogers, R-Ky., to block any financing unless the Senate is allowed to vote on the final deal.

"As stewards of taxpayer dollars, and in light of our substantial budget priorities, we cannot support this request for the Green Climate Fund, especially if the terms and conditions to pay such funds are not brought before Congress for approval as required by the U.S. Constitution," they wrote.

Senate Republicans have made similar threats.

Bodnar wouldn't say if Obama would veto an omnibus funding bill, due by Dec. 11, that doesn't include the $500 million he requested for the fund this year.

"There are many administration priorities we're monitoring as Congress continues to work on this bill, and we don't want to get too far ahead of the negotiations as they move forward," he said. "But it is clearly a priority for the president."

Separately, West Virginia Attorney General Patrick Morrisey and Texas Attorney General Ken Paxton, who are leading a legal challenge to EPA's Clean Power Plan, urged Kerry to tell world leaders that the administration's climate policies are opposed by 27 states and won't withstand legal scrutiny. Their lawsuit says the rule for existing power plants infringes on their authority, since it requires states to hit carbon-reduction targets through a blend of using natural gas and renewable energy, rather than simply setting a hard limit on power plant emissions.

"These serious legal questions are of great importance to the states, which under our constitutional system 'possess sovereignty concurrent with that of the federal government, subject only to limitations imposed by the supremacy clause,'" they said in a letter to Kerry. "We expect our federal representatives to respect that system of dual sovereignty both here at

home and in negotiations abroad."

The State Department did not comment on the letter.

The lawsuit against the power plant carbon rules is under review by the U.S. District Court of Appeals for the District of Columbia Circuit, though judges said they won't move on a requested stay of the regulations before Dec. 23.

Utility plans to mask awful odor from uncontrolled gas leak

By Brian Melley

LOS ANGELES (AP) — A utility company trying to stop a massive month-long natural gas leak says it intends to use a solution to mask the stench that is making residents ill in an area of Los Angeles.

Southern California Gas Co. officials told county supervisors Tuesday the substance is safe and would neutralize the rotten-egg smell that has led to more than 660 complaints to the air board.

Porter Ranch residents say they have concerns about the use of Odex, a biodegradable solution made from food-grade products.

Matt Pakucko says the community doesn't want to be guinea pigs in an experiment about whether the substance is safe.

Colorado town to pursue Superfund help after mine spill

By The Associated Press

DURANGO, Colo. (AP) — Southwestern Colorado officials will negotiate with state and federal agencies to set up a federally financed Superfund cleanup of inactive mines, including one that spewed millions of gallons of wastewater into rivers in three states in August.

Silverton and San Juan County leaders voted unanimously Monday to direct city staff members to pursue a Superfund designation with the Environmental Protection Agency and the Colorado Department of Public Health and Environment.

The tourism-dependent community has been wary of seeking a Superfund designation for nearly two decades, fearing stigma and red tape. Officials say a tour of four Superfund sites this month changed their minds, showing them that the process could be difficult but successful.

Silverton Mayor Chris Tookey told The Durango Herald it appears that route would provide the most comprehensive cleanup in the shortest amount of time.

Thanksgiving travel 2015: Cheap gas but fears of terrorism

By Justin Pritchard

LOS ANGELES (AP) — That other Thanksgiving tradition — congested highways and jammed airports — is getting underway with gas prices low and terrorism fears high.

An estimated 46.9 million Americans are expected to take a car, plane, bus or train at least 50 miles from home over the long holiday weekend, according to the motoring organization AAA. That would be an increase of more than 300,000 people over last year, and the most travelers since 2007.

Among the reasons given for the increase: an improving economy and the cheapest gasoline for this time of year since 2008.

On Tuesday, some travelers were gearing up for an early exit.

Thanksgiving holiday publishing schedule for EnergyGuardian

By EnergyGuardian

As is tradition during the Thanksgiving holiday week, EnergyGuardian will publish a single midday edition on Wednesday and will not publish its normal newsletters on Thursday or Friday this week. Of course, we'll cover any breaking news with alerts, and then resume normal publishing on Monday morning. We wish you and your family the happiest of Thanksgivings and thank you for your support all year long.

Long-awaited New England transmission request boosts regional energy

By Wilson Ring

MONTPELIER, Vt. (AP) — Companies designing projects to bring clean electricity to southern New England say they're grateful Massachusetts, Connecticut and Rhode Island have finally made a request for proposals to carry that power to the region.

But meeting the region's longer-term goal of expanding the use of renewable electricity from wind, solar and hydro-electricity will require more transmission capacity than the states requested, said Edward Krapels, the CEO of Anbaric Transmission, which is proposing one project in Maine and another Vermont.

"Having several states work together is just very constructive and allows larger scale renewable projects to get built, and we like that," Krapels said Tuesday.

The southern New England states are looking for clean renewable energy as part of a broader effort to reduce electricity costs and provide reliable sources of power as other aging power plants go offline. The region's governors committed to working together in 2013.

Better batteries to beat global warming: A race against time

By Seth Borenstein

WASHINGTON (AP) — One of the key technologies that could help wean the globe off fossil fuel is probably at your fingertips or in your pocket right now: the battery.

If batteries can get better, cheaper and store more power safely, then electric cars and solar- or wind- powered homes become more viable — even on cloudy days or when the wind isn't blowing. These types of technological solutions will be one of the more hopeful aspects of United Nations climate talks that begin next week in Paris.

"If you are serious about eliminating combustion of fossil fuels to power anything — a house, a city, a state — you can't do it without (energy) storage," which usually means batteries, said Carnegie Mellon University battery expert and inventor Jay Whitacre.

Former Vice President Al Gore, former U.S. Geological Survey chief (and current editor-in-chief of the journal Science) Marcia McNutt and others point to better batteries as one of the bright spots in the fight against climate change.

German investigation of VW expands to include tax evasion

By David Rising

BERLIN (AP) — German prosecutors said Tuesday they have widened their investigation of Volkswagen to include suspicion of tax evasion after revelations that some of its cars were emitting more carbon dioxide than officially reported.

Braunschweig prosecutor Birgit Seel told The Associated Press that the investigation was focused on five Volkswagen employees but would not release their names.

The focus of the investigation is on tax breaks Volkswagen received for producing low-polluting cars that it might not have qualified for if the emissions had been correctly reported, Seel said.

Volkswagen has acknowledged it produced 11 million vehicles worldwide with small diesel engines that contained software allowing them to cheat nitrogen oxide tests. Earlier this month, it also said it found "unexplained inconsistencies" in emissions from more of its vehicles of carbon dioxide.

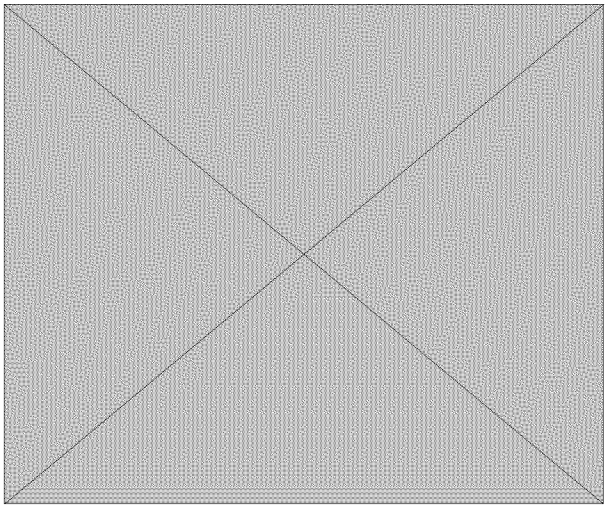
Toxic Kenya dump embodies pope's environmental concern

By Tom Odula

NAIROBI, Kenya (AP) — Using hooks or their bare hands, men, women and children traipse through the murky sludge that pools around the mountains of garbage, hunting for bottles, plastic bags and anything else that can be recycled to earn themselves enough for their daily bread.



The scavengers at Nairobi's notorious Dandora dump are some of the poorest of Kenya's poor — and they are likely to be on Pope Francis' mind when he makes his first trip to Africa Thursday to bring his message of environmental stewardship and care for society's most marginalized. His message will take on an even more poignant ring on a continent long wracked by poverty, war and disease.

One of Francis' most anticipated speeches will be to the Nairobi-based U.N. Environment Program, which has warned that those working and living near Dandora suffer from a wide range of diseases including lung cancer, skin diseases and lead poisoning that cause stunted growth and mental disabilities in children.

Francis has denounced how the poor suffer disproportionately from environmental degradation, especially the health effects of pollution, and at UNEP he is likely to call for governments to clean up their act ahead of crucial climate negotiations opening in Paris next week. He warned in his landmark encyclical "Praise Be" that the dumping of toxic, radioactive and industrial waste risks turning Earth into "an immense pile of filth."

8 injured in fire at Mexican oil refinery

By The Associated Press

MEXICO CITY (AP) — Mexico's state-run oil company says a fire at one of its refineries has injured eight people.

Petroleos Mexicanos said in a statement that its firefighters had controlled Tuesday's blaze at the Antonio Dovali Jaime refinery in the southern state of Oaxaca. It said none of the injuries to two Pemex workers and six contractors was serious.

The company said it was investigating the cause, but that the supply of petroleum products

was guaranteed.

Ethanol backers, foes battle over climate impacts as RFS, Paris approach

By Kevin Rogers

Friends and foes of ethanol are locked in a debate over the fuel's impact on climate – with backers saying it's been a key driver of emissions reductions and foes saying it's no better for the environment than traditional fossil fuels.

The back-and-forth comes as the Environmental Protection Agency prepares to finalize three years' worth of the Renewable Fuel Standard by Monday. For the first time, the agency has

proposed setting ethanol blending levels below the statutory numbers laid out in the 2005 law that created the standard, a move the ethanol industry has decried.

It also comes as the ethanol industry makes a final effort to be brought into President Barack Obama's presentation at United Nations-sponsored climate talks in Paris, also beginning Monday. The RFS wasn't included as part of the U.S. Intended Nationally Determined Contribution to cut carbon emissions, which the Obama administration submitted in March.

On a call with reporters Tuesday, Renewable Fuels Association Vice President Geoff Cooper voiced hope that Obama could work the RFS into his plan to slash emissions when he speaks to world leaders next week, noting that many other nations have discussed their biofuel policies as part of their INDC's.

"We're certainly hoping that the RFS will be mentioned or biofuels will be mentioned in Obama's speech in Paris, and certainly have been encouraging the administration to put the RFS back on the list of successful programs and policies they should be advertising on a world stage," he said. "We haven't just met expectations with the RFS, we've exceeded them in terms of GHG reduction."

RFA, and researchers from Life Cycle Associates, argue that ethanol and other biofuels have helped reduce carbon emissions through improvements in technology, carbon storage from cropland and displacement of increasingly carbon-intensive petroleum fuel. Life Cycle Associates recently penned a study for RFA estimating the program has cut 358 million metric tons of carbon since it began.

But opponents called on the administration to stay the course, and keep the program far away from its discussions in Paris.

John DeCicco, research professor at the University of Michigan Energy Institute, on another call, said that touting ethanol would undermine the administration's climate effort.

"I was relieved that the United States didn't include the RFS or other biofuel policies among the measures that the country identified for meeting its intended greenhouse gas reduction contribution," DeCicco said.

"The administration, in my view, is prudently following the dictum of 'above all, do no harm.' Contrary to popular belief, biofuels for now, and in the future, do more harm than good when it comes to climate," he continued.

DeCicco, who authored a study analyzing the carbon impact of biofuels, contends that the "assumption" that biofuels are carbon neutral because crops used to produce them store carbon doesn't hold up.

He argued that since biofuels are ultimately burned, that carbon is released back into the air, and that land used for biofuel stocks would be better left for food production, reforestation or renewable energy production.

"The same amount of carbon being pulled out of the air on the cornfield, same amount of CO2 going back into the air out of the tailpipes," he said. "There's been no change. The ethanol has not neutralized the emissions in the gasoline."

RFA and backers dismissed that line of thinking, since fossil fuel burning releases carbon that would otherwise not be in the atmosphere.

"You have a relatively rapid cycle taking place where atmospheric carbon is sucked out of the air by the plant and it's re-released when that biomass in the form of a liquid fuel is burned," Cooper said. "When you compare that to the carbon cycle of fossil fuels, you see a much different picture. You're taking fossilized carbon that's been sequestered deep underground for tens or hundreds of millions of years, and you're taking that carbon and venting it into the atmosphere and that is clearly an additive emission."

Still, some environmentalists say that the RFS hasn't lived up to its potential for helping curb greenhouse gas emissions, and so shouldn't be ranked in the Obama administration's climate policy.

"The RFS was supposed to push a lot of cellulosic biofuels into the U.S. market, but that isn't happening. And it won't happen between now and 2025, the period covered by the U.S. INDC," said Jonathan Lewis, senior counsel for climate policy at the Clean Air Task Force.

The U.S. INDC pledges to cut greenhouse gas emissions by between 26 and 28 percent from 2005 levels, and hit that mark by 2025. The administration plans to hit the goal through power plant carbon regulations, improved fuel efficiency for vehicles, methane reductions at oil and gas sites, a phase-down of hydrofluorocarbon use, and federal efficiency programs.

Spanish renewable energy firm in bankruptcy protection steps

By The Associated Press

MADRID (AP) — Spanish renewable energy and engineering giant Abengoa says it has begun bankruptcy protection proceedings in a bid to avoid what could be one of the country's largest insolvencies.

Abengoa told Spain's market regulator in a statement Wednesday that it will be seeking preliminary protection from creditors with the aim of reaching a deal on its debts within four

months.

The statement came after a Spanish technology firm announced it was pulling out of an agreement to help invest in the Seville-based firm.

Abengoa, which has some 24,000 employees worldwide, has debts worth some 9 billion euros ($9.5 billion).

Oil down on oversupply worries

By The Associated Press

Continuing concerns about oversupply sent oil prices lower Wednesday but they started recovering after release of the Energy Information Administration's weekly data about supplies.

The price of U.S. benchmark crude fell 47 cents, or 1.1 percent, to $42.40 a barrel in New York. Brent crude fell 42 cents, or 0.9 percent, to $45.70 a barrel in London. Energy stocks ended slightly lower.

The U.S. government said crude oil stockpiles rose by 1 million barrels last week. Analysts had expected a small decline. Inventories stood at 488.2 million barrels on Friday, their

highest level at this time of year in at least 80 years.

Lights out leaves cold, boredom for thousands in Washington

By Nicholas K. Geranios

SPOKANE, Wash. (AP) — Thousands of households in Washington's second-largest city were surviving without electricity nearly a week after a wind storm ripped apart power lines, trees and the electrical grid.

Gov. Jay Inslee visited Spokane Tuesday to inspect damage from the worst windstorm in the region's history, promising to explore whether Spokane County qualifies for federal disaster assistance. The storm Nov. 17 packed gusts up to 70 mph that cracked trees and sent them crashing onto cars, killing three people in the state.

More than 180,000 customers lost power at the storm's peak, and the approximately 20,000 still in the dark face a freezing forecast as Thanksgiving approaches.

"This has been a very long and very, very tough week for Spokane County," Inslee said after being briefed by local leaders, adding that he has been impressed by efforts to care for vulnerable members of the community.

UN weather agency: It's record hot out there this year

By Seth Borenstein

WASHINGTON (AP) — Because of man-made global warming and a strong El Nino, Earth's wild weather this year is bursting the annual heat record, the World Meteorological Organization announced on Wednesday.

The United Nations weather agency's early bird report on 2015 says it is the hottest year on record, surpassing last year's record heat. It made the proclamation without waiting for the end of the year because it has been so extraordinarily hot, forecast to stay that way and unlikely to cool down enough to not set a record.

The report comes the week before world leaders assemble in Paris to try to negotiate an agreement to fight climate change.

"This is all bad news for the planet," the agency's secretary-general, Michel Jarraud, said in a statement.

Revised nuclear deal between South Korea, US takes effect

By The Associated Press

SEOUL, South Korea (AP) — A new nuclear treaty with the United States governing South Korea's commercial nuclear activities during the next 20 years went into effect Wednesday, the South Korean government said.

The treaty, which replaces a previous accord reached in 1972, opens the possibility of South Korea gaining the ability to enrich uranium to produce non-weapons-grade nuclear fuel

depending on future negotiations with the United States.

The new treaty took effect after South Korea's foreign minister and the U.S. ambassador exchanged documents in Seoul, the Foreign Ministry said in a statement.

The countries agreed to the revised treaty in April after spending several years arguing over whether South Korea should have the right to enrich and reprocess U.S.-origin nuclear fuel for commercial purposes.

The revised deal does not give South Korea that right, but provides for establishment of a high-level committee to further discuss the issue, which Seoul officials described as a step toward potential consent.

Xi to give speech at opening of Paris climate conference

By The Associated Press

BEIJING (AP) — President Xi Jinping will speak at a key climate change conference in Paris later this month, before making state visits to South Africa and Zimbabwe, officials announced Wednesday.

Xi will also meet on the sidelines of the conference with the presidents of France and the United States, Vice Foreign Minister Liu Zhenmin said. Xi will discuss climate change and bilateral relations with Francois Hollande and Barack Obama on Nov. 30, he said.

The Paris conference is aimed at crafting a new international agreement to reduce greenhouse gases. China, the world's biggest emitter, has emerged as a leader in curbing such emissions six years after it was accused of obstructing the last high-level climate talks in Copenhagen. Observers hope China will persuade other developing nations to sign up to a deal.

From Dec. 1-2, Xi will visit Zimbabwe for the first time and meet with President Robert Mugabe. The visit will include cooperation agreements on infrastructure, investment, wildlife protection, financing and culture, said Zhang Ming, another vice foreign minister.

Ukraine stops buying Russian gas, closes airspace

By Nataliya Vasilyeva

MOSCOW (AP) — Tensions between Russia and Ukraine escalated further on Wednesday

Sponsored Links

as Ukraine decided to stop buying Russian natural gas — hoping to rely on supplies from other countries — and closed its airspace to its eastern neighbor.

Russia's annexation of Crimea from Ukraine in March 2014 and its support for separatist rebels in the east brought relations between the two countries to a post-Soviet low. The fighting between Russia-backed rebels and government forces in eastern Ukraine killed more than 8,000 people and left parts of Ukraine's industrial heartland in ruins. Ukraine still has no access to the territories under rebel control as well as hundreds of kilometers of the Ukrainian border with Russia.

Ukraine has since been trying to cut its dependence on Russia gas, buying from European nations that had bought it from Russia at a lower price.

Russia's state-controlled gas company, Gazprom, said Wednesday that it stopped sending gas to Ukraine on Wednesday morning and will supply no more because Ukraine has not paid in advance for more deliveries.

More

VW to offer quick fix for diesel engines in Europe

BERLIN (AP) — Volkswagen says it will take less than an hour to bring 1.6 and 2.0 liter turbodiesel engines in Europe into line with emissions rules.

The German automaker has pledged to fix 11 million vehicles worldwide that were discovered to contain software that enables them to cheat on emissions tests for nitrogen oxide.

Volkswagen said in a statement Wednesday that in Europe the 2.0 liter EA 189 engine will require only a software update taking half an hour to install.

It said the 1.6 liter engine will be fitted with a grid to improve the motor's efficiency, taking less than an hour.

More

Mist to mask bad odor from uncontrolled gas leak: SoCalGas

By Brian Melley

LOS ANGELES (AP) — A utility trying to stop a monthlong leak at a massive natural gas storage facility near a Los Angeles neighborhood said it planned to use a mist to mask the sickening stench as work continues — possibly for three more months — to plug the well.

Sponsored Links

Southern California Gas Company officials told county supervisors Tuesday that the substance is safe and would neutralize the rotten-egg smell that has led to more than 660 complaints by residents to the air board about nausea, headaches and dizziness.

Porter Ranch residents attended the supervisors meeting to criticize the company's delay in owning up to the leak that began Oct. 23 and said they are wary of claims the deodorizing mist is harmless and fear it could cause unknown chemical reactions.

"We're not your guinea pigs," said Matt Pakucko, president of a group called Save Porter Ranch.

Climate changes take heavy toll on Ugandan coffee farmers

By Rodney Muhumuza

KASESE, Uganda (AP) — Luka Kinyere felt the wet, dark volcanic soil in his calloused palm, thankful for the rain that was falling again after a dry spell.

Although the coffee plants in his plantation were turning green, dry conditions had doomed his chances of turning a profit from this year's second harvest.

Here in the foothills of Uganda's Rwenzori Mountains near the border with Congo, coffee is the lifeblood of many families, and men like the polygamous Kinyere need great coffee yields to run their households. But their success is threatened by climate change, which has warmed the region over the years, encouraging pests and diseases and bringing erratic but intense rains that erode fertile earth. Consequently, harvests have become unpredictable.

"We are in trouble now," Kinyere said one recent morning as he weeded his coffee plantation, which is interspersed with banana trees.

Thanksgiving holiday publishing schedule for EnergyGuardian

By EnergyGuardian

As is tradition during the Thanksgiving holiday week, EnergyGuardian will publish a single midday edition on Wednesday and will not publish its normal newsletters on Thursday or Friday this week. Of course, we'll cover any breaking news with alerts, and then resume

normal publishing on Monday morning. We wish you and your family the happiest of Thanksgivings and thank you for your support all year long.

Subject: Updated table of VW FOIAs
VW Requests. 11252015.docx

All – attached is an updated list of FOIA requests received to date related to VW. As many of you are aware, several of the requesters have withdrawn their requests in light of the releasable info that will be made available on the publicly-facing website, and several others are considering it. Tanya, Sara and I have a path forward on the others in terms of narrowing requests, and once we hear back from OCE, we will have a process in place for approval by all interested entities (incl DOJ EES, DOJ Crim, CARB and other state/locals, OCE, OCEFT, OPA and OTAQ) for posting documents to that website.

Have a wonderful Thanksgiving.

Subject: VW Group - 2017 Model Year Certificate Request

Hello Jim,

For your review and subsequent issuance of a Certificate of Conformity, we have submitted to EPA the Initial Application and Certificate Request for the 2017 Light-duty Truck test group HVGAT03.0AUT, representing the new Audi Q7 3.0L TFSI. The pending evaporative confirmatory tests to be conducted by EPA on December 3rd, make it necessary for us to request a conditional Certificate of Conformity to accommodate our product launch plans for the first week of January 2016.

We would like to highlight that, beginning with the submission of this test group application, we have added AECD/EI-AECD information and descriptions relating to appropriate software strategies. Comprehensive strategy reviews are still underway so further AECD description detail might be added to this application if necessary in the future.

Corresponding with this first 2017 model year application, the following require information has been submitted to Verify or is forthcoming.

- 2017 *Initial Common Sections Application* representing model introductions expected in the 1st quarter of 2016 calendar year.

- 2017 *Pre model year 2017 GHG report* is forthcoming in the next week of November 30th. Note in the meantime a place holder file was necessary to upload in Verify to allow for the test group application submission.

- The required *2017 VW Group certification preview letter* is forthcoming in the next week of November 30th .

Regards,

235 W.Va. 370
Supreme Court of Appeals of
West Virginia.

HIGHLAND MINING COMPANY,
Plaintiff Below, Petitioner
v.
WEST VIRGINIA UNIVERSITY SCHOOL OF MEDICINE, Defendant Below, Respondent.

No. 14–0370. | Submitted March 4, 2015. | Decided May 21, 2015.

Synopsis

Background: Records requestor brought action against public university school of medicine under Freedom of Information Act (FOIA), seeking disclosure of documents related to several articles co-authored by university professor suggesting that environmental impacts of surface coal mining played a role in the health problems of the area's residents. The Circuit Court, Monongalia County, Phillip D. Gaujot, J., entered summary judgment in favor of university and dismissed the action. Requestor appealed.

Holdings: The Supreme Court of Appeals, Workman, C.J., held that:

[1] university could properly invoke internal memoranda exception to FOIA;

[2] FOIA exempts from disclosure internal memoranda or letters received or prepared by any public body;

[3] professor's drafts, data compilations and analyses, proposed edits, e-mails, and other communications were exempt from disclosure under internal memoranda exemption;

[4] FOIA does not provide an academic freedom exemption for public universities; and

[5] remand was required for requestor to have the opportunity to taper its requests.

Affirmed in part, reversed in part, and remanded.

Ketchum, J., concurred in part, dissented in part, and filed opinion.

41** ***Syllabus by the Court

1. "A circuit court's entry of summary judgment is reviewed *de novo.*" Syl. Pt. 1, *Painter v. Peavy,* 192 W.Va. 189, 451 S.E.2d 755 (1994).

2. " ' "The disclosure provision of this State's Freedom of Information Act, *W.Va.Code,* 29B–1–1 *et seq.*, as amended, [is] to be liberally construed, and the exemptions to such Act are to be strictly construed. *W.Va.Code,* 29B–1–1 ." Syl. Pt. 4, *Hechler v. Casey,* 175 W.Va. 434, 333 S.E.2d 799 (1985)' Syl. pt. 5, *Queen v. West Virginia University Hospitals,* 179 W.Va. 95, 365 S.E.2d 375 (1987)." Syl. Pt. 1, *Daily Gazette Co. v. W.Va. Dev. Office,* 198 W.Va. 563, 482 S.E.2d 180 (1996).

3. " *W.Va.Code,* [§ 29B–1–4(a)(8)], which exempts from disclosure 'internal memoranda or letters received or prepared by any public body' specifically exempts from disclosure only those written internal government communications consisting of advice, opinions and recommendations which reflect a public body's deliberative, decision-making process; written advice, opinions and recommendations from one public body to another; and written advice, opinions and recommendations to a public body from outside consultants or experts obtained during the public body's deliberative, decision-making process. *W.Va.Code,* [§ 29B–1–4(a)(8)] does not exempt from disclosure written communications between a public body and private persons or entities where such communications do not consist of advice, opinions or recommendations to the public body from outside consultants or experts obtained during the public body's deliberative, decision-making process." Syl. Pt. 4, *Daily Gazette Co. v. W.Va. Dev. Office,* 198 W.Va. 563, 482 S.E.2d 180 (1996).

4. West Virginia's Freedom of Information Act, West Virginia Code § 29B–1–4(a)(8) (2012), exempts from disclosure "internal memoranda or letters received or prepared by any public body" as defined by West Virginia Code § 29B–1–2(3) (2012).

***42** 5. To invoke the "internal memoranda" exemption set forth in West Virginia Code § 29B–1–4(a)(8) (2012) successfully, the public body must show that in the

context in which the materials are prepared or considered, the documents are both predecisional and deliberative to its decision-making process. Predecisional documents are prepared in order to assist a public body decisionmaker in arriving at his or her decision. Deliberative material reflects the give-and-take of the consultative process, by revealing the manner in which the public body evaluates possible alternatives relevant to the decisional process.

6. "The primary purpose of the invasion of privacy exemption to the Freedom of Information Act, *W.Va.Code,* [§ 29B–1–4(a)(2)], is to protect individuals from the injury and embarrassment that can result from the unnecessary disclosure of personal information." Syl. Pt. 6, *Hechler v. Casey,* 175 W.Va. 434, 333 S.E.2d 799 (1985).

7. The West Virginia Freedom of Information Act does not provide an "academic freedom" exemption to its general disclosure provision, West Virginia Code § 29B–1–3 (2012).

8. "A statute, or an administrative rule, may not, under the guise of 'interpretation,' be modified, revised, amended or rewritten." Syl. Pt. 1, *Consumer Advocate Div. v. Pub. Serv. Comm'n,* 182 W.Va. 152, 386 S.E.2d 650 (1989).

9. "In response to a proper Freedom of Information Act request, a public body has a duty to redact or segregate exempt from non-exempt information contained within the public record(s) responsive to the FOIA request and to disclose the nonexempt information unless such segregation or redaction would impose upon the public body an unreasonably high burden or expense. If the public body refuses to provide redacted or segregated copies because the process of redacting or segregating would impose an unreasonably high burden or expense, the public body must provide the requesting party a written response that is sufficiently detailed to justify refusal to honor the FOIA request on these grounds. Such written response, however, need not be so detailed that the justification would compromise the secret nature of the exempt information." Syl. Pt. 5, *Farley v. Worley,* 215 W.Va. 412, 599 S.E.2d 835 (2004).

10. "Pursuant to West Virginia Code § 29B–1–3(5) (2012), a public body is vested with the authority and discretion to impose a search or retrieval fee in connection with a Freedom of Information Act request to provide public records provided that such fee is reasonable." Syl. Pt. 2, *King v. Nease,* 233 W.Va. 252, 757 S.E.2d 782 (2014).

11. "For a person to have brought a suit for the disclosure of public records under the West Virginia Freedom of Information Act (FOIA), as permitted by W.Va.Code § 29B–1–5 (1977) (Repl.Vol.1998), so as to entitle him/her to an award of attorney's fees for "successfully" bringing such suit pursuant to W.Va.Code § 29B–1–7 (1992) (Repl.Vol.1998), he/she need not have prevailed on every argument he/she advanced during the FOIA proceedings or have received the full and complete disclosure of every public record he/she wished to inspect or examine. An award of attorney's fees is proper even when some of the requested records are ordered to be disclosed while others are found to be exempt from disclosure or are released in redacted form. In the final analysis, a successful FOIA action, such as would warrant an award of attorney's fees as authorized by W.Va.Code § 29B–1–7 , is one which has contributed to the defendant's disclosure, whether voluntary or by order of court, of the public records originally denied the plaintiff." Syl. Pt. 7, *Daily Gazette Co. v. W.Va. Dev. Office,* 206 W.Va. 51, 521 S.E.2d 543 (1999).

Opinion

WORKMAN, Chief Justice:

Petitioner Highland Mining Company ("Highland") filed this civil action under the ***43** West Virginia Freedom of Information Act ("FOIA"), West Virginia Code §§ 29B–1–1 to – 7 (2012), seeking disclosure of public records from Respondent West Virginia University School of Medicine ("WVU"). The FOIA requests focused on documents related to several articles co-authored by WVU Associate Professor Michael Hendryx, Ph.D., suggesting that environmental impacts of surface coal mining play a role in the health problems of the area's residents. The parties litigated this matter for two years in the Circuit Court of Monongalia County; WVU released certain documents to Highland but withheld certain other documents, either in whole or in part, claiming they were statutorily exempt. Finally, the circuit

court granted summary judgment in favor of WVU, and dismissed this action.

On appeal to this Court, Highland raises several assignments of error and argues the circuit court's order should be reversed because it is based upon an unprecedented expansion of the FOIA exemptions. Upon review, we affirm, in part; reverse, in part; and remand the case for further proceedings. For the reasons discussed below, this Court finds: (1) WVU may invoke the FOIA's "internal memoranda" exemption set forth in West Virginia Code § 29B–1–4(a)(8) to withhold documents that reflect Professor Hendryx's deliberative process; (2) WVU may not claim an "academic freedom" privilege to avoid the plain language of the FOIA; (3) the FOIA's "personal privacy" exemption set forth in West Virginia Code § 29B–1–4(a)(2) is not applicable to documents containing anonymous peer review comments of the draft articles but those documents are still exempt from disclosure under the FOIA's "internal memoranda" exemption; (4) Highland should have been afforded the opportunity to modify its FOIA requests before the circuit court dismissed the action; and (5) the circuit court must issue a ruling on Highland's request for attorney fees and costs. Accordingly, we remand this matter for further proceedings consistent with this opinion.

I. FACTUAL AND PROCEDURAL HISTORY

Highland submitted extensive FOIA requests to WVU on February 1, 2012. Highland requested documents related to eight articles co-authored by Professor Hendryx, Director of the West Virginia Rural Health Research Center, with WVU's School of Medicine's Department of Community Medicine. In those articles, Professor Hendryx suggested there was a connection between surface coal mining and birth defects, cancer, and poor quality of life in the region. [1] Highland requested essentially all documents related to the initiation, preparation and publication of Professor Hendryx's articles.[2]

***44** By e-mails dated March 2, 2012, WVU refused to release any documents responsive to the FOIA requests. WVU asserted the documents were exempt from disclosure under the following FOIA exemptions: (1) information of a personal nature, West Virginia Code § 29B–1–4(a)(2); (2) information specifically exempt from disclosure by statute, West Virginia Code § 29B–1–4(a)(5) ; (3) internal memoranda, West Virginia Code § 29B–1–4(a)(8) ; and (4) trade secrets, West Virginia Code § 29B–1–4(a)(1) .

On April 12, 2012, Highland instituted this action against WVU, seeking disclosure of the documents it requested pursuant to the FOIA. WVU filed a motion to dismiss on August 3, 2012, claiming the FOIA requests were overly broad and unduly burdensome; Highland filed a motion for summary judgment on September 11, 2012. Following a hearing on these motions, the circuit court rejected WVU's claim of undue burden. The circuit court stated WVU was "stonewalling" Highland by refusing to provide any responsive documents. By order entered November 7, 2012, the circuit court denied WVU's motion to dismiss and deferred a ruling on Highland's motion for summary judgment. The circuit court required that WVU release any responsive information to Highland, and if any responsive documents were withheld from disclosure or redacted, that WVU provide a *Vaughn* index [3] and explanative affidavit.

Thereafter, WVU retained the services of a document management company to electronically manage the production of documents for Highland's FOIA requests. Over the course of this litigation, WVU has made five productions of documents to Highland, producing some 2,364 documents, totaling 11,090 pages. Four of those document productions [4] included a separate *Vaughn* index and corresponding affidavit, explaining WVU's decision to redact 119 documents and withhold 772 documents.

***45** On April 3, 2013, Highland filed a renewed motion for summary judgment, arguing the *Vaughn* indices that WVU provided were facially insufficient and that most, if not all, of the exemptions cited by WVU were not applicable. Following briefing, the circuit court held a hearing on this motion. On May 30, 2013, the circuit court entered an "Agreed Order Regarding Preparation of Sample *Vaughn* Index." The circuit court required WVU to provide a sample *Vaughn* index with respect to a limited number of withheld documents; this *Vaughn* index was to include a more detailed explanation of each withheld document, specifically, how each cited exemption applied to justify the respective withholding.

On July 17, 2013, WVU provided the sample *Vaughn* index and the affidavit of WVU's associate general counsel. The sample *Vaughn* index listed ninety-three documents that were redacted or withheld from production. According to WVU, some documents were withheld on the basis of the FOIA's "internal memoranda" exemption, some documents were withheld on the basis of "academic freedom" privilege,

VW FOIA, EPA 06/20/2017 2017-FFP_036276

and some documents were withheld on the basis of the FOIA's "trade secret" exemption.

On November 6, 2013, the circuit court entered an "Agreed Order Regarding Briefing on Outstanding Issues," pursuant to which it required both parties to file renewed motions for summary judgment. Thereafter, the parties filed briefs and identified those documents listed on the sample *Vaughn* index they wanted the circuit court to review in camera.

In Highland's memorandum of law in support of its renewed motion for summary judgment, Highland provided the following factual background regarding its request for documents concerning Professor Hendryx's work:

> At all relevant times, Michael Hendryx, Ph.D., was a professor employed by the defendant West Virginia University School of Medicine ("WVU") who holds degrees in psychology but is not a medical doctor, toxicologist, or epidemiologist. Prof. Hendryx was the Director of the West Virginia Rural Health Research Center, where he and his colleagues received public funds to research rural health issues. In that capacity, Hendryx published taxpayer-funded papers such as those that are the subject of the FOIA Requests, focused on linking coal mining and adverse health impacts. His goal ~~in~~ his own words ~~is~~ to convince "politicians" that West Virginia "can have a better economy if we work to create a more diverse economy that does not depend on coal." He further hopes his studies help eliminate mountaintop removal mining and focus policymakers away from coal and towards "cleaner" forms of energy. He thinks that "tighter standards on emissions controls is an important outcome of [his] research." He hopes "to get [his papers] more in the eyes of state policy makers" so that "the Appalachian people and governments could consider whether our reliance on coal mining for the economy is a good idea or not." (footnotes and citations omitted).

Highland requested that the circuit court order WVU to provide all responsive documents listed on the sample *Vaughn* index, arguing they do not fall under any applicable FOIA exemption. Highland also requested that the circuit court order WVU to confer with Highland regarding the retrieval and review of additional responsive materials that have yet to be gathered in response to the FOIA request. Finally, Highland asserted the circuit court should award it attorney fees and costs in accordance with West Virginia Code § 29B–1–7 because WVU improperly denied Highland access to the public records.

In WVU's memorandum of law in support of its renewed motion for summary judgment, WVU argued:

> The majority of the documents were withheld or redacted because they contain the preliminary deliberations and research of an academic professor. Specifically, these documents include draft research papers and correspondence between co-authors with comments or suggestions regarding the drafts themselves. Like other state employees (perhaps even more so), these faculty members must be permitted the latitude to craft and hone their work in ***46** an environment that fosters the free exchange of ideas.

Thus, WVU claimed the documents withheld were exempt from disclosure under the "internal memoranda" exemption of the FOIA, and/or an "academic freedom" privilege. [5] WVU also argued that Highland's FOIA requests were unduly burdensome because WVU identified over 240,000 documents that were potentially responsive to Highland's requests and "[t]o date, WVU [had] reviewed 43,733 documents in a process that ... spanned the pendency of this case."

[1] **[2]** Following an in camera review of the documents,[6] the circuit court entered an order on March 19, 2014, granting summary judgment to WVU and denying Highland's cross-motion. The circuit court held that WVU had properly refused to provide all withheld and redacted documents on the basis of: (1) the FOIA's "internal memoranda" exemption found at West Virginia Code § 29B–1–4(a)(8) ; (2) an "academic freedom" privilege it incorporated into the FOIA's "personal privacy" exemption found at West Virginia Code § 29B–1–4(a)(2) ; and/or (3) the FOIA requests were unduly burdensome. The circuit court did not address Highland's motion for attorney fees and costs.

On appeal to this Court, Highland raises eight assignments of error. [7] Highland urges this Court to reverse the order of the circuit court and find that WVU must provide the documents requested below. Highland maintains it needs this information in order to evaluate the internal validity of the studies and the conclusions reached in Professor

Hendryx's articles. Highland also requests that it be granted its reasonable attorney fees and costs incurred in prosecuting this action, pursuant to West Virginia Code § 29B–1–7 .

II. STANDARD OF REVIEW

[3] **[4]** **[5]** "Summary judgment is the preferred method of resolving cases brought under FOIA." *Farley v. Worley,* 215 W.Va. 412, 418, 599 S.E.2d 835, 841 (2004) (quoting *Evans v. Office of Pers. Mgmt.,* 276 F.Supp.2d 34, 37 (D.D.C.2003)). An order granting summary judgment engenders plenary review. "A circuit court's entry of summary judgment is reviewed *de novo.* " Syl. Pt. 1, *Painter v. Peavy,* 192 W.Va. 189, 451 S.E.2d 755 (1994).

III. DISCUSSION

[6] The FOIA requires the release of public records upon request. *See AT & T Commc'ns of W.Va., Inc. v. Pub. Serv. Comm'n,* 188 W.Va. 250, 253, 423 S.E.2d 859, 862 (1992) ("The general policy of th[e] act is to allow as many public records as possible to be made available to the public." (footnote omitted)).

***47** **[7]** Pursuant to the FOIA, "[e]very person has a right to inspect or copy any public record of a public body in this State, except as otherwise expressly provided by ... [W.Va.Code § 29B–1–4][.]" W.Va.Code, § 29B–1–3(1) . A FOIA requester is not required to explain why a record should be disclosed or for what purpose a record is being requested.[8] The FOIA sets forth nineteen specific exemptions to its general disclosure provisions. *See id.* § 29B–1–4 .

[8] **[9]** This Court has made clear that the FOIA's exemptions are to be strictly construed, while the FOIA's disclosure provisions are to be liberally construed:

> " 'The disclosure provision of this State's Freedom of Information Act, *W.Va.Code,* 29B–1–1 *et seq.* , as amended, [is] to be liberally construed, and the exemptions to such Act are to be strictly construed. *W.Va.Code,* 29B–1–1 .' Syl. Pt. 4, *Hechler v. Casey,* 175 W.Va. 434, 333 S.E.2d 799 (1985) ." Syl. pt. 5, *Queen v. West Virginia University Hospitals,* 179 W.Va. 95, 365 S.E.2d 375 (1987).

Syl. Pt. 1, *Daily Gazette Co. v. W.Va. Dev. Office,* 198 W.Va. 563, 482 S.E.2d 180 (1996) ("*Daily Gazette I* "). The burden of proof falls on the public body asserting the exemption to demonstrate that the public record should be protected from disclosure: "The party claiming exemption from the general disclosure requirement under West Virginia Code § 29B–1–4 has the burden of showing the express applicability of such exemption to the material requested."[9] Syl. Pt. 7, *Queen,* 179 W.Va. at 95, 365 S.E.2d at 375.

[10] With this background to guide us, we now address the two FOIA exemptions at issue in this appeal, [10] whether the FOIA requests are unduly burdensome to WVU, and Highland's request for attorney fees and costs.

A. The FOIA's Internal Memoranda Exemption

[11] The principal statutory provision at issue in this case, West Virginia Code § 29B–1–4(a)(8) provides: "[i]nternal memoranda or letters received or prepared by any public body" are specifically exempt from disclosure under the FOIA. Through the development of case law, this FOIA exemption is commonly referred to as the "deliberative process" exemption and we use the terms interchangeably. The precise question presented here is an issue of first impression for this Court: whether a state university may invoke the "internal memoranda" exemption with respect to documents related to its professor's scientific/academic research. The parties do not cite any precedent interpreting other states' FOIAs directly on point.

[12] **[13]** We begin our analysis with our leading case on this issue, *Daily Gazette I.* A newspaper made FOIA requests to the West Virginia Development Office seeking information involving the Development Office's deliberations about whether to support a proposed industrial plant in Mason County, West Virginia. In response, the Development Office released certain documents but withheld others on the ground they were "internal memoranda" exempt from disclosure under the FOIA. ***48** 198 W.Va. at 567, 482 S.E.2d at 184–85 . We set forth the criteria courts must apply when addressing the FOIA's "internal memoranda" exemption in syllabus point four of *Daily Gazette I:*

> *W.Va.Code,* [§ 29B–1–4(a)(8)], [11] which exempts from disclosure "internal memoranda or letters received or prepared by any public body" specifically exempts

> from disclosure only those written internal government communications consisting of advice, opinions and recommendations which reflect a public body's deliberative, decision-making process; written advice, opinions and recommendations from one public body to another; and written advice, opinions and recommendations to a public body from outside consultants or experts obtained during the public body's deliberative, decision-making process. *W.Va.Code,* [§ 29B–1–4(a)(8)] does not exempt from disclosure written communications between a public body and private persons or entities where such communications do not consist of advice, opinions or recommendations to the public body from outside consultants or experts obtained during the public body's deliberative, decision-making process.

198 W.Va. at 575, 482 S.E.2d at 192 (footnote added).

In *Daily Gazette I,* we recognized the relationship between West Virginia's FOIA "internal memoranda" exemption and the federal FOIA counterpart, which exempts from public disclosure "inter-agency or intra-agency memorandums or letters which would not be available by law to a party other than an agency in litigation with the agency[.]" 5 U.S.C. § 552(b)(5) (1994). 198 W.Va. at 571, 482 S.E.2d at 188. This federal FOIA exemption "preserves to government agencies 'such recognized evidentiary privileges as the attorney-client privilege, the attorney work-product privilege, and the executive "deliberative process" privilege.' *Schell [v. U.S. Dep't of Health & Human Services],* 843 F.2d [933] at 939 [(6th Cir.1988)] (citing *Parke, Davis & Co. v. Califano,* 623 F.2d 1, 5 (6th Cir.1980))." *Daily Gazette I,* 198 W.Va. at 571, 482 S.E.2d at 188 . We acknowledged the "deliberative process" privilege wording of the federal FOIA differs from that of West Virginia's FOIA. *Id.* Nevertheless, we found federal precedent useful in construing our FOIA.

[14] In *Daily Gazette I,* we cited a seminal decision from the United States Supreme Court on the "deliberative process" privilege, *N.L.R.B. v. Sears, Roebuck & Co.,* 421 U.S. 132, 95 S.Ct. 1504, 44 L.Ed.2d 29 (1975):

> [t]he cases uniformly rest the [deliberative process] privilege on the policy of protecting the "decision making processes of government agencies," ... and focus on documents "reflecting advisory opinions, recommendations and deliberations comprising part of a process by which governmental decisions and policies are formulated." ... The point, plainly made in [S.Rep. No. 813, 89th Cong., 1st Sess. 9 (1965)], is that the "frank discussion of legal or policy matters" in writing might be inhibited if the discussion were made public; and that the "decisions" and "policies formulated" would be the poorer as a result.

Daily Gazette I, 198 W.Va. at 572, 482 S.E.2d at 189 (quoting *Sears, Roebuck,* 421 U.S. at 150, 95 S.Ct. 1504).

[15] **[16]** **[17]** **[18]** The "deliberative process" privilege is designed to protect the quality of government decision-making by ensuring that it is not done "in a fishbowl." *EPA v. Mink,* 410 U.S. 73, 87, 93 S.Ct. 827, 35 L.Ed.2d 119 (1973), *superceded by statute,* Freedom of Information Act, 5 U.S.C. § 552(b)(1) (2002) . This FOIA exemption encourages free discussion of alternatives, and "insulates against the chilling effect likely were officials to be judged not on the basis of their final decisions, but 'for matters they considered before making up their minds.' " *City of Virginia Beach, Va. v. U.S. Dep't of Commerce,* 995 F.2d 1247, 1253 (4th Cir.1993) (quoting *Jordan v. U.S. Dep't of Justice,* 591 F.2d 753, 772–73 (D.C.Cir.1978) , *overruled in part on other grounds, Crooker v. Bureau of Alcohol, Tobacco & Firearms,* 670 F.2d 1051 (D.C.Cir.1981)). "While transparency ***49** in government is an important democratic value, our society has often recognized that many important governmental functions operate best removed from the public glare." Michael N. Kennedy, *Escaping the Fishbowl: A Proposal to Fortify the Deliberative Process Privilege,* 99 Nw. U.L. Rev. 1769, 1770 (2005). Nevertheless, because of the FOIA's strong policy favoring disclosure, this exemption should be construed "as narrowly as consistent with efficient Government operation." *Mink,* 410 U.S. at 87, 93 S.Ct. 827 (quoting S.Rep. No. 813, 89th Cong., 1st Sess. 9 (1965)). [12] We are mindful that the "deliberative process" FOIA exemption benefits the public and not the officials who assert it. *See Kaiser Aluminum and Chem. Corp. v. U.S.,* 157 F.Supp. 939, 944 (Ct.Cl.1958).

[19] **[20]** **[21]** To invoke the "internal memoranda" exemption successfully, the public body must meet two prerequisites: in "the context in which the materials are used," the documents must be both predecisional and deliberative. *Virginia Beach,* 995 F.2d at 1253 (quoting *Wolfe v. Dep't of Health & Human Servs.,* 839 F.2d 768, 774 (D.C.Cir.1988)). Predecisional documents are "prepared in order to assist an agency decisionmaker in arriving at his decision." *Renegotiation Bd. v. Grumman Aircraft Eng'g Corp.,* 421 U.S. 168, 184, 95 S.Ct. 1491, 44 L.Ed.2d 57 (1975). Deliberative material "reflects the give-and-take

of the consultative process," by revealing the manner in which the agency evaluates possible alternative policies or outcomes. *Virginia Beach,* 995 F.2d at 1253 (citing *Coastal States Gas Corp. v. Dep't of Energy,* 617 F.2d 854, 866 (D.C.Cir.1980)).

WVU argues the FOIA's "internal memoranda" exemption justifies its decision to withhold 760 documents. A research scientist at a public college or university is subject to FOIA because he or she is employed by a public body. Therefore, WVU maintains he or she must be equally and congruently entitled to the protection of this FOIA exemption. For these public body employees, the public function they are hired to perform is the research and publication of scholarly articles. WVU contends the "deliberations" they undertake and the "decisions" the professors make include the final publication of their research efforts. A public university or college's "policy" is to nurture, support, and publish academic research on areas of public concern; its mission is fulfilled when the article is published. Therefore, WVU maintains that if the deliberative processes of its researchers are open for public inspection, WVU will be unable to fulfill its mission.

In opposition, Highland argues this FOIA exemption does not apply because Professor Hendryx was not engaged in policy making on behalf of WVU when preparing the subject articles. In fact, WVU has expressly disclaimed the notion that any research paper published by a WVU professor represents WVU's position or policy. [13] Furthermore, Highland argues the publication of the articles at issue did not involve policy making or a deliberative process within the meaning of this FOIA exemption. Highland relies on a narrow reading of *Ethyl Corp. v. Environmental Protection Agency,* 25 F.3d 1241 (4th Cir.1994), wherein the Fourth Circuit Court of Appeals held the "deliberative process" exemption only allows for the withholding of documents that "bear on the formulation or exercise of *policy-oriented judgment.*" *Id.* at 1248 (emphasis added), *see also Coastal States,* 617 F.2d at 866 (declaring federal FOIA "deliberative process" privilege protects "premature disclosure of *proposed policies*") (emphasis added).

Ultimately, Highland maintains WVU can *never* avail itself of the "internal memoranda" FOIA exemption because neither the WVU School of Medicine nor its Rural ***50** Health Research Center is a state agency; they do not regulate any activity, promulgate rules or policies that govern any entity's conduct, or engage in any other type of governmental function. Highland acknowledges, however, that Professor Hendryx may have sought to influence the development of policy by federal and state agencies responsible for regulating surface coal mining, but he had no authority to directly develop or impose any such policies.

We agree with Highland's factual assessment that while WVU is a public body, it is not a state agency engaged in policy making. We further agree that Professor Hendryx did not formulate policy on behalf of WVU when he published the research articles. Nevertheless, we emphatically reject Highland's legal argument that WVU may not invoke the "internal memoranda" exemption because that exemption covers only documents reflecting agency policy making communications. There is a bulk of case law applying the federal FOIA's "deliberative process" exemption in the context of administrative agency policy/decision making. [14] At the same time, however, a plethora of federal FOIA cases also extend this exemption to public bodies engaged in activities other than agency policy making. "In its relatively short life, the deliberative process privilege has become one of the most predominate privileges exercised by the government and is now routinely asserted in a wide array of litigation challenging government decisionmaking." Michael Ray Harris, *Standing in the Way of Judicial Review: Assertion of the Deliberative Process Privilege in APA Cases,* 53 St. Louis U.L.J. 349, 350 (2009).

[22] Having considered all of these competing arguments, we reject Highland's contention that the "internal memoranda" exemption applies only to administrative agency policy making. A plain reading of our FOIA confirms that WVU has the stronger argument. In West Virginia, administrative agencies are not the only public bodies subject to the FOIA and its accompanying exemptions.West Virginia Code § 29B–1–4(a)(8) exempts from disclosure "internal memoranda or letters received or prepared by *any public body.*" *Id.* (emphasis added). And the definition of "public body" under our FOIA is extensive:

> "Public body" means every state officer, agency, department, including the executive, legislative and judicial departments, division, bureau, board and commission; every county and city governing body, school district, special district, municipal corporation, and any board, department, commission, council or agency thereof; and any other body

> which is created by state or local authority or which is primarily funded by the state or local authority.

Id. § 29B–1–2(3) .[15] The public body entities and their employees set forth above engage in an immensely diverse range of endeavors related to government service. Therefore, we expect their internal deliberations will necessarily address a variety of matters related ***51** to their state and/or local governmental responsibilities.

Consequently, in *Daily Gazette I,* we did not confine the "internal memoranda" exemption to deliberations preceding agency policy making. Instead, we held a public body may exempt from disclosure documents which reflect its "*deliberative decision-making process.* " 198 W.Va. at 575, 482 S.E.2d at 192 (emphasis added). We explained that courts must evaluate the "function and significance of the documents" to the public body's decision-making process, including an explanation of "the nature of the decision-making authority vested in the office or person issuing the disputed documents[.]" *Id.*[16]

[23] **[24]** **[25]** We hereby announce that West Virginia's Freedom of Information Act, West Virginia Code § 29B–1–4(a)(8) (2012), exempts from disclosure "internal memoranda or letters received or prepared by any public body" as defined by West Virginia Code § 29B–1–2(3) (2012). The FOIA reflects our Legislature's recognition that disclosure of public body communications reflecting deliberative processes on any subject could have a chilling effect on future communications. Confidentiality of certain documents connected with a public body's decision-making process ensures frank and open discussion among its employees, which in turn enhances the quality of their decisions. Considering the strong policy favoring disclosure of public documents, courts must construe this exemption narrowly as consistent with efficient state and local government operations. The key question in every case is whether the disclosure of documents would expose a public body's decision-making process so as to discourage candid discussion and thereby undermine the public body's ability to perform its functions. *See Times Mirror Co. v. Super. Ct.,* 53 Cal.3d 1325, 283 Cal.Rptr. 893, 813 P.2d 240, 250 (1991) ("In short, the courts' focus ... is less on the nature of the records sought and more on the effect of the records' release.").

[26] Having determined that WVU, as a public body, may assert the "internal memoranda" exemption, we now turn to the pivotal question of whether the withheld documents fall within this exemption. As discussed above, to invoke the "internal memoranda" exemption set forth in West Virginia Code § 29B–1–4(a)(8) (2012) successfully, the public body must show that in the context in which the materials are prepared or considered, the documents are both predecisional and deliberative to its decision-making process. Predecisional documents are prepared in order to assist a public body decisionmaker in arriving at his or her decision. Deliberative material reflects the give-and-take of the consultative process, by revealing the manner in which the public body evaluates possible alternatives relevant to the decisional process.

[27] The relevant public body decision for purposes of applying the "deliberative process" exemption to these public records is not whether WVU adopted a position or policy regarding mountaintop coal removal's health effects on state residents. Rather, when a FOIA requester seeks records surrounding or leading up to an agency publication, the relevant agency decision for purposes of applying the "deliberative process" exemption is the development and ultimate publication of the article. *See United Am. Fin., Inc. v. Potter,* 531 F.Supp.2d 29, 44 (D.D.C.2008) (finding that relevant agency decision was agency's publication of article where plaintiff's FOIA request sought all ***52** supporting documents and drafts of documents relating to article), *accord, Hooker v. U.S. Dep't of Health and Human Servs.,* 887 F.Supp.2d 40, 57 (D.D.C.2012).

In *Hooker,* a parent of an autistic child filed a federal FOIA action against the Department of Health and Human Services ("HHS") and the Centers for Disease Control ("CDC"), seeking disclosure of information, including all correspondence among researchers, regarding the publication of studies relating to a possible connection between a mercury-based compound used in vaccines and autism. *Id.* at 45. Like Highland sought in the instant case, Mr. Hooker wanted access to this information to refute the conclusions reached in the articles. Mr. Hooker contended the HHS and CDC consistently denied a relationship between the mercury-based compound and autism, "in the face of 'a mounting body of compelling scientific literature' that support[ed] the existence of such a relationship." *Id.* The court rejected Mr. Hooker's arguments and found the HHS and CDC properly applied the federal FOIA "deliberative process" exemption to material that was deliberative in nature when withholding

VW FOIA, EPA 06/20/2017 2017-FFP_036281

internal communications revealing the analysis underlying the draft manuscripts. *Id.* at 58.

[28] **[29]** **[30]** We find the court's analysis in *Hooker* instructive. Thus, we limit our inquiry to whether a requested document, regardless of its nature, (1) was generated before the publication of the research article to which it relates, and if so, (2) whether it reflects Professor Hendryx's deliberative, decision-making or thought process employed to arrive at the article's conclusions and ultimate publication. "[T]he deliberative process exemption protects 'recommendations, draft documents, proposals, suggestions, and other subjective documents which reflect the personal opinions of the writer rather than the policy of the agency.' " *Virginia Beach,* 995 F.2d at 1253 (quoting *Coastal States,* 617 F.2d at 866). "Draft documents, by their very nature, are typically predecisional and deliberative." *Keeper of the Mountains Found. v. U.S. Dep't of Justice,* 514 F.Supp.2d 837, 854 (S.D.W.Va.2007) (citations omitted).

In *Chemical Manufacturers Association v. Consumer Product Safety Commission,* 600 F.Supp. 114 (D.D.C.1984), the district court addressed this same issue and found documents qualified under the federal FOIA "deliberative process" exemption because they detailed an exchange of ideas among scientists regarding the agency's study of a chemical used in the manufacture of toys. *Id.* at 119. The court ruled these scientific deliberations were part of the agency's "give-and-take" and that disclosure of such deliberations would discourage open discussion among the agency scientists. *Id.* Specifically, the court held that "scientists should be able to withhold nascent thoughts where disclosure would discourage the intellectual risk-taking so essential to technical progress." 600 F.Supp. at 118.

Not only is the parallel to the concerns raised in *Hooker* and *Chemical Manufacturers* evident, but Highland's attempt to invade Professor Hendryx's deliberative process is patent. First, considering the context in which the materials were used, WVU has shown that any document which reveals the analysis underlying Professor Hendryx's articles is predecisional. In the state higher education academic setting, documents generated before the final publication of a scientific research article—all documents related to the initiation, preparation and publication of the articles—are by their very nature predecisional. Second, WVU has shown that any document, regardless of its nature, that exposes the give-and-take of the scientific research consultative process, by revealing the manner in which the researchers evaluate possible alternative outcomes, is deliberative. Because these drafts, data compilations [17] and analyses, proposed edits, e-mails ***53** and other communications, and peer review comments and responses relate to the planning, preparation and editing necessary to produce a final published article, they are exempt from disclosure. We therefore find that, on the evidence before the circuit court at the summary judgment hearing, [18] WVU successfully carried its burden of proving certain documents fell under the "internal memoranda" umbrella of the FOIA.

[31] **[32]** Our review of the appendix record, however, reveals that WVU improperly claimed the "deliberative process" exemption to some documents that are post-decisional and/or non-deliberative. [19] As the Supreme Court recognized in *Sears,* the purpose of the deliberative process privilege is to protect the quality of an agency's decision; revealing "communications made after the decision and designed to explain it" do not affect a decision's quality. 421 U.S. at 152, 95 S.Ct. 1504.

Our holding today comports with *American Tradition Institute v. Rector and Visitors of the University of Virginia,* 287 Va. 330, 756 S.E.2d 435 (2014) ("*UVA*"), where the Virginia Supreme Court was faced with facts analogous to the instant case. In *UVA,* a requester brought suit under Virginia's FOIA against the University of Virginia seeking disclosure of documents produced or received by a former professor while working at the university. *Id.* at 437. The professor was a climate scientist and former professor whose scholarly work had "generated much scientific and political interest." *Id.* Applying a FOIA exemption,[20] the court upheld the university's exclusion of the documents from production. *Id.* at 442. In *UVA*, "many noted scholars and academic administrators submitted affidavits attesting to the harmful impact disclosure would have in these circumstances." *Id.* The court quoted an affidavit from John Simon, Vice President and Provost of the university and former Vice–Provost of Duke University, addressing the concerns relevant to academia:

> If U.S. scientists at public institutions lose the ability to protect their communications with faculty at other institutions, their ability to collaborate will be gravely harmed. The result will be a loss of scientific and creative opportunities for faculty at institutions in states which have not established protections under state FOIAs for such communications.... For faculty at public institutions such

VW FOIA, EPA 06/20/2017 2017-FFP_036282

as the University of Virginia, compelled disclosure of their ***54** unpublished thoughts, data, and personal scholarly communications would mean a fundamental disruption of the norms and expectations which have enabled research to flourish at the great public institutions for over a century.

...

I can state unequivocally that recruitment of faculty to an institution like the University of Virginia will be deeply harmed if such faculty must fear that their unpublished communications with the scientific collaborators and scholarly colleagues are subject to involuntary public disclosure.

Id. at 442.

The same reasoning applies with equal force here. [21] When we focus on the resulting effect of the documents' release, the resolution of this case is decidedly clear. The involuntary public disclosure of Professor Hendryx's research documents would expose the decision-making process in such a way as to hinder candid discussion of WVU's faculty and undermine WVU's ability to perform its operations. We acknowledge that West Virginia's FOIA does not have an exemption specifically applicable to state institutions of higher education like Virginia does. Nevertheless, we find that documents generated during higher education academic research may be legally protected from disclosure under West Virginia Code § 29B–1–4(a)(8) , when the public body demonstrates the criteria outlined above are satisfied. Accordingly, we affirm the order of the circuit court insofar as it found WVU properly invoked the FOIA "internal memoranda" exemption to withhold certain documents.

B. The FOIA's Personal Privacy Exemption

[33] **[34]** The FOIA's "personal privacy" exemption permits the withholding of "information of a personal nature such as that kept in a personal, medical or similar file[.]" W.Va.Code § 29B–1–4(a)(2) . In syllabus point six of *Hechler v. Casey,* 175 W.Va. 434, 333 S.E.2d 799 (1985) , we held: "The primary purpose of the invasion of privacy exemption to the Freedom of Information Act, *W.Va.Code,* [§ 29B–1–4(a)(2)], [22] is to protect individuals from the injury and embarrassment that can result from the unnecessary disclosure of personal information." *Id.* (footnote added). We employ a two-pronged inquiry in deciding whether the public body has correctly withheld records under this exemption. First, we determine whether the records in question are "personal," "medical," or "similar" files. Second, if so, we then balance or weigh the individual's right of privacy against "the public's right to know." *Hechler,* 175 W.Va. at 444, 333 S.E.2d at 810.

Our analysis is consistent with case law interpreting the federal FOIA counterpart. The federal FOIA exemption provides that government can withhold "personnel and medical files and similar files the disclosure of which would constitute a clearly unwarranted invasion of personal privacy." 5 U.S.C. § 552(b)(6) (2009). *See* Martin E. Halstuk, *When Is An Invasion of Privacy Unwarranted Under the FOIA? An Analysis of the Supreme Court's "Sufficient Reason" and "Presumption of Legitimacy" Standards,* 16 U.Fla.J.L. & Pub. Pol'y 361, 371 (2005) ("When an agency makes a determination in a privacy-interests case[,] ... it first must decide whether the requested records fall within the definition of 'personnel,' 'medical,' or 'similar' files. Second, the agency must balance the invasion of the individual's personal privacy against the public's interest in disclosure to determine whether the disclosure is justified.") (footnotes omitted).

***55** **[35]** Here, the circuit court concluded WVU properly withheld 740 documents on the basis of "academic freedom," a concept which it incorporated into the FOIA's "personal privacy" exemption. [23] The circuit court conceded that its ruling was unprecedented. The circuit court's holding rested upon three distinct considerations: (1) the First Amendment encompasses an "academic freedom" privilege that is "transcendental, applicable to both constitutional law and to FOIA"; (2) the guarantee set forth in the West Virginia Constitution that provides all citizens have a right to a thorough and efficient educational system; and (3) the determination that individual peer reviewers have an expectation of privacy that will be harmed by the release of their comments, even though such comments are submitted anonymously.

[36] We summarily reject the first two considerations outlined above. First, the West Virginia Freedom of Information Act does not provide an "academic freedom" exemption to its general disclosure provision, West Virginia Code § 29B–1–3 (2012). Although the First Amendment has been held to apply to protect colleges and universities against undue interference by the government, [24] First Amendment jurisprudence does not support its application in the context of this case. Because the exemptions to the Act are required to be

strictly construed, this Court declines to create an "academic freedom" exemption not specifically set forth in the FOIA. *See* Syl. Pt. 5, *Queen,* 179 W.Va. 95, 365 S.E.2d 375 . In *Banker v. Banker,* 196 W.Va. 535, 474 S.E.2d 465 (1996) we stated, "[i]t is not for this Court arbitrarily to read into [a statute] that which it does not say. Just as courts are not to eliminate through judicial interpretation words that were purposely included, we are obliged not to add to statutes something the Legislature purposely omitted." *Id.* at 546–47, 474 S.E.2d at 476–77 . This Court has further cautioned that "[a] statute, or an administrative rule, may not, under the guise of 'interpretation,' be modified, revised, amended or rewritten." Syl. Pt. 1, *Consumer Advocate Div. v. Pub. Serv. Comm'n,* 182 W.Va. 152, 386 S.E.2d 650 (1989). Therefore, we find the broad principle of "academic freedom" would not justify WVU's wholesale avoidance of the plain language of the FOIA. [25]

Second, the guarantee of a "thorough and efficient system of free schools" under the West Virginia Constitution does not extend to institutions of higher education such as WVU. *See* W.Va. Const. art. XII, § 1 ; Syl. Pt. 7, *Randolph Co. Bd. of Educ. v. Adams,* 196 W.Va. 9, 467 S.E.2d 150 (1995) ("Whatever items are deemed necessary to accomplish the goals of a school system and are in fact an integral fundamental part of the elementary and secondary education must be provided free of charge to all students in order to comply with the constitutional mandate of a free school system pursuant to Section 1 of Article XII of the West Virginia Constitution."). Our Constitution does not establish a right to a higher education; the circuit court's reliance on this principle was entirely misplaced.

We now turn to the third consideration set forth above. The pertinent issue here is whether Highland's request for "[a]ll comments by peer reviewers concerning drafts ***56** of the documents" constitute "information of a personal nature" within the meaning of the privacy exemption at West Virginia Code § 29B–1–4(a)(2) . WVU asserts the peer reviewers' privacy expectations would be violated by the release of their anonymous, confidential comments. The identity of peer reviewers is traditionally kept confidential in order to facilitate a candid exchange regarding a proposed article and its research. WVU maintains that to subject a reviewer's comments to public scrutiny, even while keeping the identity of the reviewer withheld, would render a reviewer more reluctant to challenge traditional ideas and propose unconventional concepts.

Highland responds that WVU's argument "stands the notion of 'personal' information on its ear." Applying the plain meaning of the word "personal," Highland argues this exemption cannot apply to peer review comments, submitted anonymously to an academic or scientific journal, that are not kept in a "personal, medical, or similar file" pertaining to the person who prepared them. We agree.

This Court finds that WVU fails to meet the first prong of *Hechler* because the records in question are not "personal, medical or similar file[s]" that fall under the FOIA's "personal privacy" exemption. W.Va.Code § 29B–1–4(a)(2) . In fact, these anonymous peer review comments contain no personal identifying information at all. Therefore, the only case relied upon by WVU on this issue is distinguishable from the instant case. In *Cook v. National Archives & Records Administration,* 758 F.3d 168 (2nd Cir.2014) , the court held records pertaining to research requests made on behalf of former President and former Vice President for records from their own administration were "similar files" to "personnel" files exempt under the federal FOIA "personal privacy" exemption, because "they contain[ed] detailed records containing personal information identifiable to the former officials and their representatives." *Id.* at 175.

Because WVU fails to meet the first prong of *Hechler,* our analysis stops here; we need not proceed to address the second prong to balance or weigh the individual's right of privacy against "the public's right to know." 175 W.Va. at 444, 333 S.E.2d at 810 . Accordingly, we reverse the order of the circuit court insofar as it found that WVU properly withheld documents on the basis of "academic freedom," as it incorporated into the FOIA's "personal privacy" exemption set forth in West Virginia Code § 29B–1–4(a)(2) .

[37] We do, however, agree with the circuit court's finding that the same documents would fall under the FOIA "internal memoranda" exemption. As previously discussed, disclosure of the anonymous peer review comments submitted to Professor Hendryx, as he was drafting the articles, would undercut the decision-making process embodied by the FOIA's exemption and discourage open discussion necessary for scientific/academic research. *See Daily Gazette I,* 198 W.Va. at 572, 482 S.E.2d at 189 (stating that "in the spirit of further promoting frank and open discussions during an agency's deliberative process, courts have interpreted the deliberative process privilege to include opinions and recommendations to a governmental agency by outside consultants and experts so long as such opinions or

recommendations are obtained during the government agency's deliberative, predecisional process").

C. Reasonableness of FOIA Request

WVU initially moved to dismiss this action claiming the FOIA requests were unduly burdensome. The circuit court denied this motion and WVU engaged in document review and production. WVU produced 2,364 documents, totaling 11,090 pages and redacted 119 of those documents; WVU withheld 772 documents and claimed the FOIA exemptions discussed above. By the time the circuit court granted summary judgment in favor of WVU, the university claimed to have reviewed over 40,000 documents and identified over 200,000 potentially responsive documents.

In its March 19, 2014, order, the circuit court found "at this point," WVU had demonstrated that the FOIA requests were unduly burdensome, and noted it was concerned about the time and expense that "would be required to complete the process[.]" WVU ***57** maintains the circuit court correctly found that the past two years of litigation and document production proved Highland's FOIA requests were unduly burdensome. WVU argues that while the FOIA is designed to foster public transparency and accountability, the Act also reflects the Legislature's "concern that information requests not become mechanisms to paralyze other necessary government functions." *Farley,* 215 W.Va. at 422 n. 14, 599 S.E.2d at 845 n. 14.

Highland counters that the circuit court inexplicably failed to address its voluntary offer to limit or potentially eliminate the need for further document processing. In response to a letter from WVU's counsel pointing out the anticipated cost to process that information, Highland's counsel agreed that WVU could defer processing of those documents pending further rulings. In addition, Highland noted that if the documents that have been withheld thus far were provided, Highland may decide that it does not wish to receive any of the remaining documents. In accordance with this discussion, in its Cross–Motion for Summary Judgment, Highland only requested the release of previously-withheld documents as listed in the *Vaughn* indices, and that WVU be required to confer with Highland as to any additional documents.

[38] **[39]** To be sure, the FOIA requires a public body to conduct a reasonable search for responsive records. Further,

> [i]n response to a proper Freedom of Information Act request, a public body has a duty to redact or segregate exempt from non-exempt information contained within the public record(s) responsive to the FOIA request and to disclose the nonexempt information unless such segregation or redaction would impose upon the public body an unreasonably high burden or expense. If the public body refuses to provide redacted or segregated copies because the process of redacting or segregating would impose an unreasonably high burden or expense, the public body must provide the requesting party a written response that is sufficiently detailed to justify refusal to honor the FOIA request on these grounds. Such written response, however, need not be so detailed that the justification would compromise the secret nature of the exempt information.

Syl. Pt. 5, *Farley,* 215 W.Va. at 412, 599 S.E.2d at 835.

[40] However, the FOIA does not require a public body to conduct what amounts to an unreasonably burdensome search in response to a request. *See Am. Fed'n of Gov't Emps. v. U.S. Dep't of Commerce,* 907 F.2d 203, 208–09 (D.C.Cir.1990) (finding unreasonably burdensome FOIA request to locate "every chronological office file and correspondent file, internal and external, for every branch office, staff office [etc.]"); *Assassination Archives & Research Ctr. v. C.I.A.,* 720 F.Supp. 217, 219 (D.D.C.1989) (recognizing public record laws are not designed to "reduce government agencies to full-time investigators on behalf of requesters."), *but see Pub. Citizen, Inc. v. Dep't of Educ.,* 292 F.Supp.2d 1, 6 (D.D.C.2003) (rejecting claim of undue burden when defendants "merely claim that [manually] searching ... 25,000 paper files would be 'costly and take many hours to complete,' ... [w]ithout more specification as to why a search certain to turn up responsive documents would be unduly burdensome").

[41] When examining the burden on a public body to comply with a FOIA request, we note our FOIA provides "[t]he public body may establish fees reasonably calculated to reimburse it for its actual cost in making reproductions of

such records." W.Va.Code § 29B–1–3(5). This Court recently held in syllabus point two of *King v. Nease,* 233 W.Va. 252, 757 S.E.2d 782 (2014) : "Pursuant to West Virginia Code § 29B–1–3(5) (2012), a public body is vested with the authority and discretion to impose a search or retrieval fee in connection with a Freedom of Information Act request to provide public records provided that such fee is reasonable." [26]

***58 [42]** Based on Highland's proposal to limit the need for WVU to continue further document processing, we find the circuit court erred in finding the FOIA requests were unreasonably burdensome and dismissing the action at this stage of the litigation. The "FOIA requester is the 'master' of the FOIA request" and "FOIA requests are frequently clarified or modified even after a lawsuit is filed." *People for Am. Way Found. v. U.S. Dep't of Justice,*451 F.Supp.2d 6, 12 (D.D.C.2006).

Accordingly, we reverse the circuit court's order insofar as it dismissed this action and remand the case for further proceedings. We find Highland should have the opportunity to taper its FOIA requests correspondent to our holdings in this case. Thereafter, the circuit court should revisit its decision of whether Highland's FOIA requests are unduly burdensome. Applying this Court's ruling, the circuit court will find that WVU's document production obligations are dramatically reduced. If the circuit court does not dismiss this action, it should consider appointing a special commissioner pursuant to Rule 53 of the West Virginia Rules of Civil Procedure to review any documents withheld by WVU, in camera, to determine whether they are exempt from disclosure under the FOIA. Further, the parties are expected to confer regarding the fees Highland may incur with respect to any further document processing and production by WVU.

D. Highland's Request for Attorney Fees and Costs

[43] [44] [45] The FOIA provides that any person who is a successful FOIA litigant must be awarded attorney fees and costs. Specifically, West Virginia Code § 29B–1–7 provides:

> [a]ny person who is denied access to public records requested pursuant to this article and who successfully brings a suit filed pursuant to section five of this article shall be entitled to recover his or her attorney fees and court costs from the public body that denied him or her access to the records.

In syllabus point seven of *Daily Gazette Co. v. West Virginia Development Office,* 206 W.Va. 51, 521 S.E.2d 543 (1999) (hereinafter "*Daily Gazette II* "), we held:

> For a person to have brought a suit for the disclosure of public records under the West Virginia Freedom of Information Act (FOIA), as permitted by W.Va.Code § 29B–1–5 (1977) (Repl.Vol.1998), so as to entitle him/her to an award of attorney's fees for "successfully" bringing such suit pursuant to W.Va.Code § 29B–1–7 (1992) (Repl.Vol.1998), he/she need not have prevailed on every argument he/she advanced during the FOIA proceedings or have received the full and complete disclosure of every public record he/she wished to inspect or examine. An award of attorney's fees is proper even when some of the requested records are ordered to be disclosed while others are found to be exempt from disclosure or are released in redacted form. In the final analysis, a successful FOIA action, such as would warrant an award of attorney's fees as authorized by W.Va.Code § 29B–1–7 , is one which has contributed to the defendant's disclosure, whether voluntary or by order of court, of the public records originally denied the plaintiff.

Highland contends the circuit court erred in neglecting to address its request for attorney fees and costs. While WVU disagrees, Highland argues it successfully brought this FOIA suit because WVU originally denied it access to *any* public records, and, WVU was forced to produce more than 2,200 documents in compliance with the circuit court's November 7, 2012 order. WVU argues that the circuit court's final ruling that Highland's FOIA requests were unduly burdensome eliminates its claim for attorney fees and costs.

[46] "Typically, we have steadfastly held to the rule that we will not address a nonjurisdictional issue that has not been determined by the lower court." *State ex rel. Clark*

v. Blue Cross Blue Shield of W.Va., Inc., 203 W.Va. 690, 699, 510 S.E.2d 764, 773 (1998), *accord* Syl. Pt. 3, *Voelker v. Frederick Bus. Props. Co.,* 195 W.Va. 246, 465 S.E.2d 246 (1995). Accordingly, we remand this case for further proceedings to take up Highland's request for attorney fees and costs in ***59** accordance with the guidelines set forth in *Daily Gazette II.* The circuit court must determine if Highland instituted "a successful FOIA action," that would warrant such an award as authorized by West Virginia Code § 29B–1–7, and enter an order addressing this request.

IV. CONCLUSION

For the reasons set forth above, the March 19, 2014, order of the Circuit Court of Monongalia County is affirmed, in part; reversed, in part; and this action is remanded for further proceedings consistent with this opinion.

Affirmed, in part; reversed, in part; and remanded.

Justice BENJAMIN, deeming himself disqualified, did not participate in the decision of this case.

Senior Status Justice McHUGH sitting by temporary assignment.

Justice KETCHUM concurs in part, dissents in part, and reserves the right to file a separate opinion.

Justice KETCHUM, concurring, in part, and dissenting, in part:

I agree with the excellent majority opinion that the "deliberative process" exemption applies to the documents withheld by WVU except for the few documents that are post-decisional and/or non-deliberative. However, I believe this Court should have recognized the "academic freedom" exemption adopted by other states and not required the production of any documents. [1] Research professors should not be constrained by FOIA witch hunts which could deter them from pursing their work for fear of being barraged by voluminous, unduly-burdensome FOIA requests.

In addition, I believe that WVU should not be required to retrieve and review additional materials "not yet gathered" to comply with Highland Mining's open-ended FOIA requests. Highland Mining's FOIA requests have caused WVU to review over 240,000 documents. Enough is enough. Highland Mining's broad-based FOIA requests are nothing more than fishing expeditions which are unduly burdensome. My best trial lawyer guess is that WVU has already spent more than $1 million dollars on its legal fees, and the fees and costs of the document management company it hired.

Next, I would not have remanded the case for the circuit judge to determine whether Highland Mining instituted a "successful FOIA action" that would warrant an award of attorney fees. Our FOIA statute, W.Va.Code § 29B–1–7, provides that a requester shall be entitled to recover attorney fees and costs if their FOIA suit is successful. [2] *See also, Daily Gazette Co., Inc. v. W. Va. Development Office,* 206 W.Va. 51, 521 S.E.2d 543 (1999). While syllabus point 7 of *Daily Gazette* [3] provides a general statement of when ***60** attorney fees may be appropriate in a FOIA case, this Court has never set forth the specific parameters of what constitutes a successful FOIA suit. The vast majority of jurisdictions require that the FOIA requester substantially prevail before attorney fees may be awarded. The majority rule across the United States provides:

> [T]o be "eligible" to receive an award of attorney's fees or costs, plaintiffs must show that they "substantially prevailed" in obtaining the documents sought. This does not mean that the plaintiffs need necessarily have pursued the action to a successful judgment. Rather, proof that a plaintiff has "substantially prevailed" generally has been held to require convincing evidence of the following two threshold conditions: (1) the filing of the action could reasonably have been regarded as necessary to obtain the information; and (2) the filing of the action had a substantial causative effect on the delivery of the information.
>
> *Construction and Application of Freedom of Information Act Provision (5 U.S.C.A. § 552(a)(4)(E)) Concerning Award of Attorney's Fees and Other Litigation Costs,* 179 A.L.R. Fed. 1, § 2[a] (2002).

The majority opinion guts the heart of Highland Mining's FOIA requests. WVU had to retrieve and review over 200,000 documents as a result of Highland Mining's FOIA requests. The majority opinion's ruling only requires WVU to disclose a few documents, approximately 1% of those Highland requested. Highland Mining lost the major issues that were in dispute herein. Common sense and simple math dictate the obvious—Highland Mining did not substantially prevail.

VW FOIA, EPA 06/20/2017 2017-FFP_036287

Rather, the only thing Highland Mining accomplished was placing an expensive, unreasonable burden on WVU.

Finally, the majority opinion states that on remand, the circuit court must determine if this case should be dismissed after Highland submits its reduced FOIA requests. The majority states that if the circuit court does not dismiss the case upon remand, the circuit court should consider the appointment of a special commissioner pursuant to Rule 53 of the West Virginia Rules of Civil Procedure. This special commissioner would review the documents WVU produces to determine whether they are exempt from disclosure under our FOIA. Special commissioners are paid by the parties. They are super expensive. They are lawyers who usually charge for numerous hours at high hourly rates. These types of expenses have a tendency to lock the courthouse doors, depriving litigants of their day in court.

For the foregoing reasons, I respectfully concur, in part, and dissent, in part.

Footnotes

1 One of these articles sets forth the following conclusions:

> Results indicate that previously documented HRQOL [Health Related Quality of Life] disparities in Appalachia's coal mining areas are concentrated in MTM [Mountaintop Mining] zones in the central part of the region. These disparities partly reflect the chronic socioeconomic weaknesses inherent in coal-dependent economies and highlight the need for efforts at economic diversification in these areas. However, significant disparities persist after control for these risks and suggest that the environmental impacts of MTM may also play a role in the health problems of the area's population. In April 2010, the EPA [Environmental Protection Agency] issued new guidance regulating MTM that recognized the environmental and community health costs imposed by this practice: the guidance was intended to make new MTM permits much more difficult to obtain. Several weeks after this ruling, the first MTM permit application to come before the EPA was nevertheless approved, leading to concerns from environmental communities that the rules would not be interpreted or enforced as intended. Our results contribute to the evidence base in support of the April EPA decision.

Zullig, K.J. and Hendryx, M., et al.,*Health–Related Quality of Life Among Central Appalachian Residents in Mountaintop Mining Counties,* 101, No. 5 Am. J. Pub. Health 848, 852 (May 2011) (footnotes omitted).

2 Highland submitted two FOIA requests on the same day. In one FOIA request (referred to by the parties as the "subpoena-based FOIA request"), Highland requested the release of the same information that had been the subject of three subpoenas previously served on WVU by Highland in December of 2011. Articles co-authored by Professor Hendryx were used to challenge Highland's proposal to expand its Reylas surface coal mine in Logan County, West Virginia, in a civil action filed in the United States District Court for the Southern District of West Virginia. *Ohio Valley Environ. Coal., Inc., et al. v. U.S. Army Corps of Eng's*,Civil Action No. 3:11–cv–0149, 2011 WL 1485603 (S.D.W.Va.2011). The plaintiffs in that litigation sought to add a new claim to their complaint based upon adverse health effects associated with surface coal mining. Highland served three subpoenas on non-party WVU seeking information regarding the three articles cited by the plaintiffs in that lawsuit. After the district court denied the plaintiffs' motion to add health-based claims to their complaint, Highland withdrew the subpoena request in January of 2012. However, Highland advised WVU that it would file a FOIA request seeking the same information.

> In the subpoena-based FOIA request, Highland requested all documents related to the initiation, preparation and publication of those articles; it requested the curriculum vitae of the study authors, the data used in the statistical analysis presented in the subject articles, including data discussed but not shown, documents and communications related to the selection or rejection of particular mining areas to be examined in the studies, communications with members of specifically-identified third-party organizations in the course of preparing the articles, and documents related to the door-to-door health interviews conducted pursuant to the Self–Reported Cancer Study, including sample interview forms and the completed forms.
>
> In its other FOIA request (referred to by the parties as the "communications FOIA request"), Highland requested letters, e-mails and other communications sent to or from Professor Hendryx pertaining to five other articles that he co-authored. In addition, the communications FOIA request sought peer review comments on drafts of Professor Hendryx's articles.

3 *See* Syl. Pt. 6, *Farley v. Worley,* 215 W.Va. 412, 599 S.E.2d 835 (2004) ("When a public body asserts that certain documents or portions of documents in its possession are exempt from disclosure under any of the exemptions contained in W.Va.Code, 29B–1–4 (2002 Repl.Vol.) (2003 Supp.), the public body must produce a *Vaughn* index named for *Vaughn v. Rosen,* 484 F.2d 820 (D.C.Cir.1973), *cert. denied,* 415 U.S. 977, 94 S.Ct. 1564, 39 L.Ed.2d 873 (1974). The *Vaughn* index must provide a relatively detailed justification as to why each document is exempt, specifically identifying the reason(s) why an exemption under W.Va.Code, 29B–1–4 is relevant and correlating the claimed exemption with the particular part of the withheld document to which the claimed exemption applies. The *Vaughn* index need not be so detailed that it compromises the privilege claimed. The public body must also submit an affidavit, indicating why disclosure of the documents would be harmful and why such documents should be exempt. Syllabus point 3 of *Daily Gazette Co., Inc. v. West Virginia Development Office,* 198 W.Va. 563, 482 S.E.2d 180 (1996), is hereby expressly modified.").

4 The first *Vaughn* index listed 121 documents WVU withheld on the basis they were not considered "public records" subject to the FOIA; WVU later withdrew that justification for withholding any documents. Under the FOIA, a " '[p]ublic record' includes any writing containing information relating to the conduct of the public's business, prepared, owned and retained by a public body." W.Va.Code § 29B–1–2(4) .

5 In this pleading, WVU did not contend the documents were withheld based on the FOIA's "trade secret" exemption. WVU stated that although this exemption had been asserted previously, it no longer believed the circuit court had to specifically address this issue because the same documents covered by the "trade secret" exemption were subject to other exemptions asserted by WVU.

6 We note the availability and scope of in camera review is within the discretion of the circuit court. Such review offers a check on the accuracy and honesty of the public body's asserted exemptions. In camera review is conducted incident to, rather than as a substitute for, the *Vaughn* index.

7 Highland contends: (1) the "internal memoranda" exemption under the FOIA does not apply to matters involving scientific research and publication of articles by state university professors; (2) there is no "academic freedom" exemption under the FOIA; (3) the guarantee of a "thorough and efficient system of free schools" under the West Virginia Constitution does not extend to institutions of higher education such as WVU, and cannot serve as the basis for an "academic freedom" exemption under the FOIA; (4) the "personal privacy" exemption under the FOIA cannot be applied when no personal or identifying information is sought or threatened to be released; (5) the circuit court failed to impose the burden of proof on WVU to establish the applicability of the cited FOIA exemptions; (6) WVU either waived its reliance on the "trade secret" exemption under the FOIA or failed to establish it; (7) the circuit court erred in reversing its earlier ruling and finding—nearly two years after this action was filed—that Highland's FOIA requests were unduly burdensome; and (8) the circuit court should have awarded Highland attorney fees and costs as a successful FOIA litigant. For the sake of brevity, this Court has consolidated these assignments of error.

8 An exception to this general rule occurs when a request pertains to documents falling under the FOIA's "personal privacy" exemption, West Virginia Code § 29B–1–4(a)(2) . As discussed later in this opinion, we have crafted a two-pronged test to establish whether disclosure would result in an unwarranted invasion of privacy. *See Hechler v. Casey,* 175 W.Va. 434, 333 S.E.2d 799 (1985).

9 We promptly dispose of Highland's assignment of error that the circuit court failed to impose the burden of proof on WVU to establish the applicability of the FOIA exemptions it asserted. The appendix record reveals the circuit court properly held WVU to its burden: WVU produced multiple, detailed *Vaughn* indices (e.g., the index attached to the fourth production of documents was fifty-two pages); filed numerous briefs on the merits of its claimed exemptions; participated in oral arguments; and submitted documents for the circuit court's in camera review.

10 In Highland's brief to this Court, it argues that WVU either waived its reliance on the "trade secret" exemption under FOIA or failed to establish it. Because WVU does not argue how the "trade secret" exemption may apply to any documents withheld in this case, we agree. *See generally Addair v. Bryant,* 168 W.Va. 306, 316, 284 S.E.2d 374, 382 (1981) (holding this Court may deem as waived any issue not argued in party's appellate brief).

11 The syllabus point cites West Virginia Code § 29B–1–4(8) (1977), which contains the same language as West Virginia Code § 29B–1–4(a)(8) (2012).

12 Evidence of government misconduct, crime, and fraud bars the application of the "deliberative process" exemption. *See In re Sealed Case,* 121 F.3d 729, 738 (D.C.Cir.1997) ("[W]here there is reason to believe the documents sought may shed light on government misconduct, the privilege is routinely denied, on the grounds that shielding internal government deliberations in this context does not serve the public's interest in honest, effective government" (internal quotation marks omitted)).

13 In 2011, WVU released the following position statement: "The findings of any particular research project do not reflect, nor should they, any particular opinion or position of the University itself."

14 The root of this trend may be explained by the fact the federal FOIA represented the culmination of years of congressional effort to amend the public information provisions of the Administrative Procedure Act of 1946.

> The FOIA replaced Section 3 of the Administrative Procedure Act (APA) of 1946, which ostensibly served as a public information provision to permit the public to gain access to federal records. However, the law was filled with loopholes that the government routinely exploited to withhold records. The main obstacle to public access under the APA was a requirement that record requesters demonstrate that the solicited information pertain directly to them. This restriction prevented journalists, writers, historians, lawyers, and others from gaining access to information held by the federal government.

Martin E. Halstuk, *When Is An Invasion of Privacy Unwarranted Under the FOIA? An Analysis of the Supreme Court's "Sufficient Reason" and "Presumption of Legitimacy" Standards,* 16 U.Fla.J.L. & Pub. Pol'y 361, 367 (2005) (footnotes omitted).

15 The federal FOIA uses the term "agency," not "public body." *See Pub. Citizen Health Research Grp. v. Dep't of Health, Ed. & Welfare,* 668 F.2d 537, 542 (D.C.Cir.1981) ("For purposes of the Freedom of Information Act the statute provides that 'the term "agency" as defined in section 551(1) ... includes any executive department, military department, Government corporation, Government controlled corporation, or other establishment in the executive branch of the Government (including the Executive Office of the President), or any independent regulatory agency.' 5 U.S.C. § 552(e) (1976).").

16 Similarly, other state courts have applied their respective FOIA's "deliberative process" exemption to decisions unrelated to agency policy making. For instance, documents generated by public employees charged with hiring decisions may be exempt from disclosure when they are both predecisional and deliberative. *See Wilson v. Super. Ct.,* 51 Cal.App.4th 1136, 1143, 59 Cal.Rptr.2d 537 (1997) (applying California state's FOIA, documents held exempt when their sole purpose was to aid Governor in selecting gubernatorial appointees, process which depends upon confidential, candid discussion of candidates' professional competence, political views and private conduct). Other state courts have also applied this FOIA exemption to documents reflecting decision-making activities of judicial branch employees unrelated to agency policy making. *See Commonwealth v. Vartan,* 557 Pa. 390, 733 A.2d 1258, 1266 (1999) (holding "deliberative process" privilege protected deliberations by members of Pennsylvania Supreme Court regarding decision to build new courthouse).

17 Nearly all Professor Hendryx's articles that were the subject of Highland's FOIA requests were based on studies using secondary data only. However, the Self–Reported Cancer Rates Study did involve the use of personal surveys of residents living in areas where mountaintop coal removal took place. We find WVU may withhold documents generated in data compilation because these documents could reveal the deliberative process. *See Hooker,* 887 F.Supp.2d at 58 (" 'The choice of what factual material ... to include or remove during the drafting process is itself often part of the deliberative process, and thus is properly exempt under [the federal FOIA "deliberative process" exemption).']." (quoting *ViroPharma, Inc. v. Dep't of Health and Human Servs.,* 839 F.Supp.2d 184, 193 (D.D.C.2012)); *Montrose Chem. Corp. of Cal. v. Train,* 491 F.2d 63, 67–70 (1974) (holding "deliberative process" privilege applied to summaries containing only factual material because documents revealed author's evaluative judgment as to relative significance of facts and what facts he considered to be important or unimportant); *Washington Research Project, Inc. v. Dep't of Health, Educ. & Welfare,* 504 F.2d 238, 250–251 (D.C.Cir.1974) ("[T]he judgmental element arises through the necessity to select and emphasize certain facts at the expense of others."); *Farmworkers Legal Servs. v. U.S. Dep't of Labor,* 639 F.Supp. 1368, 1373 (E.D.N.C.1986) ("Because the list sought here is composed of selective fact, it ... could reveal the deliberative process.").

18 This Court reviewed the same evidence. The parties submitted a Joint Appendix that contained five DVDs of the documents provided by WVU in response to Highland's FOIA requests. WVU also submitted to this Court, under seal, the documents it submitted to the circuit court for in camera review.

19 For instance, Document No. 03–0217 in the sample *Vaughn* index consists of an e-mail dated July 28, 2011, regarding a potential speaking engagement pertaining to the various articles at issue. We find WVU's argument unconvincing that this e-mail should be protected from disclosure because it "reflect[s] these individuals' thought processes and analyses that ultimately resulted in the final decision on how such matters concerning publicity should be handled on behalf of [WVU.]" To accept WVU's argument here, we would be allowing the exception to swallow the rule.

20 Virginia Code § 2.2–3705.4(4) (West 2014) provides:

> Data, records or information of a proprietary nature produced or collected by or for faculty or staff of public institutions of higher education, other than the institutions' financial or administrative records, in the conduct of or as a result of study or research on medical, scientific, technical or scholarly issues, whether sponsored by the institution alone or

> in conjunction with a governmental body or a private concern, where such data, records or information has not been publicly released, published, copyrighted or patented.

21 The *UVA* case best illuminates the public policy facet of the issue before us. If West Virginia State colleges and universities cannot retain their researchers and scientists because the FOIA exposes them to an unfair intrusion into the scientific process, then the problem of operating in a "fishbowl" pales in comparison to the challenge of attracting and retaining highly qualified faculty. *See generally* Dianna G. Goldenson, *FOIA Exemption Five: Will it Protect Government Scientists From Unfair Intrusion?,* 29 B.C. Envtl. Aff. L. Rev. 311 (2002) (arguing federal FOIA "deliberative process" exemption should be recognized by courts as mode of protecting government scientists from unfair intrusion into scientific research).

22 The syllabus point cites West Virginia Code § 29B–1–4(2) (1977), which contains the same language as West Virginia Code § 29B–1–4(a)(2) (2012).

23 The circuit court noted, however, that the "deliberative process" exemption would shield the same documents from disclosure.

24 The primary case cited by WVU on this issue, *Sweezy v. New Hampshire,* 354 U.S. 234, 77 S.Ct. 1203, 1 L.Ed.2d 1311 (1957), is not relevant to the instant case. *Sweezy* was decided on the basis of a denial of due process, in the form of an open-ended, unlimited investigation of the personal conduct and affairs of a faculty member. The Supreme Court in *Sweezy* dealt with a challenge to the use of a New Hampshire statute to hold a university professor in contempt for failing to answer questions posed to him (by the New Hampshire Attorney General, on behalf of the Legislature) concerning his belief in Communism and involvement with the Progressive Party. *Id.* at 242–244, 77 S.Ct. 1203 . This case did not involve the federal FOIA or any similar statute, nor did it involve the professor's research activities/scientific publications.

25 Likewise, WVU wrongly suggests we should recognize an "academic freedom" exemption from FOIA to mirror "the justification for First Amendment protections afforded to journalists." The principles that support the extension of First Amendment protections to journalists and their confidential sources have no application to the matter before us.

26 Our Legislature recently amended this portion of the FOIA. *See* House Bill 2636, 2015 Leg. 82nd Sess. (W.Va. 2015) (effective June 12, 2015) (authorizing public body to establish fees reasonably calculated to reimburse actual costs in making reproductions of records; public body may not charge search or retrieval fee as part of costs associated with making reproduction of records).

1 Virginia adopted the "academic freedom" exemption by statute. Virginia Code § 2.2–3705.4(4) (2014) , sets forth a FOIA exemption covering:

> Data, records or information of a proprietary nature produced or collected by or for faculty or staff of public institutions of higher education, other than the institutions' financial or administrative records, in the conduct of or as a result of study or research on medical, scientific, technical or scholarly issues, whether sponsored by the institution alone or in conjunction with a governmental body or a private concern, where such data, records or information has not been publicly released, published, copyrighted or patented.

2 W.Va.Code § 29–1–7 states:

> Any person who is denied access to public records requested pursuant to this article and who successfully brings a suit filed pursuant to section five of this article shall be entitled to recover his or her attorney fees and court costs from the public body that denied him or her access to the records.

3 Syllabus Point 7 of Daily Gazette states:

> For a person to have brought a suit for the disclosure of public records under the West Virginia Freedom of Information Act (FOIA), as permitted by W. Va.Code § 29B–1–5 (1977) (Repl.Vol.1998), so as to entitle him/her to an award of attorney's fees for "successfully" bringing such suit pursuant to W. Va.Code § 29B–1–7 (1992) (Repl.Vol.1998), he/she need not have prevailed on every argument he/she advanced during the FOIA proceedings or have received the full and complete disclosure of every public record he/she wished to inspect or examine. An award of attorney's fees is proper even when some of the requested records are ordered to be disclosed while others are found to be exempt from disclosure or are released in redacted form. In the final analysis, a successful FOIA action, such as would warrant an award of attorney's fees as authorized byW. Va.Code § 29B–1–7 , is one which has contributed to the defendant's disclosure, whether voluntary or by order of court, of the public records originally denied the plaintiff.

EPA submission.pdf

Jim,

I guess I had my wires crossed when we talked. I had already submitted the Common sections on the 25th.

As discussed I will revise the Common with the GHG report in the coming days after its officially submitted.

Regards,

Bill Rodgers

Jim,

We've just learned that the installation of the driveshaft in the Q7 EDV currently at your facility will entail further installing a new center differential in the transmission. If you plan to do on-road testing with this EDV we recommend that we transport the vehicle back to our workshop after confirmatory tests have concluded for the installation process. Let us know your thoughts when you can.

Subject: MY2016 Audi GVGAV02.0AAC Decision Request

Hello Jim,

This morning I submitted decision requests for the vehicles below. These decision requests were to represent E0 tests that were recently ran on the vehicles below for the MY2016 GVGAV02.0AAC test group for fuel economy labeling purposes since prior to these tests, only E10 was ran.

This testgroup is the Audi 2.0L TFSI Gen-3, which the A4 has already been called in for confirmatory testing for MY2017.

Vehicle ID: GAAC-CAF, Configuration: 0

Vehicle ID: GAAC-CAQ, Configuration: 0

Please inform us of your decision as soon as possible.

Thanks Jim.

Attorneys for Plaintiff

INTRODUCTION

Plaintiff Robert F. Eslick ("Plaintiff"), by his undersigned counsel, individually and on behalf of all others similarly situated, alleges the following against Volkswagen Group of America, Inc. ("VW USA"), Volkswagen AG ("VW AG"), Martin Winterkorn ("Winterkorn"), and Michael Horn ("Horn") (collectively, "Volkswagen"), as well as Robert Bosch GmbH ("Bosch") (collectively, VW USA, VW AG , Winterkorn, Horn, and Bosch are referred to as "Defendants"), based, as to himself, on personal knowledge, and on information and belief in all other respects, based on the investigation of counsel. This Court has jurisdiction over this action pursuant to the Class Action Fairness Act ("CAFA"), 28 U.S.C. § 1332(d) and based on a federal question, 28 U.S.C. § 1331.

NATURE OF THE ACTION

1. This nationwide civil RICO, false advertising and consumer fraud class action is brought by Plaintiff on behalf of himself and all similarly situated consumers. This lawsuit concerns the intentional installation of so-called "defeat devices" on over a million diesel Volkswagen, Audi, and Porsche vehicles sold in the United States since 2009 . As of September 29, 2015, Volkswagen admitted that the emissions scandal could affect as many as 11 million Volkswagen vehicles worldwide, as well as an additional 2.1 million Audi -branded vehicles. By early November 2015, Volkswagen announced that its internal investigation had uncovered carbon dioxide emissions irregularities in approximately 800,000 additional vehicles. Over the last seven years, Volkswagen has pocketed $33 billion or more i n illicit profits or revenues from its scheme.

2. Volkswagen marketed its diesel vehicles as environmentally -friendly cars that combined extremely high fuel efficiency and performance with very low emissions.

Volkswagen touted the vehicles as containing a unique combustion system that enabled them to meet (indeed, exceed) national emissions standards on a cost-effective basis and without the need to add an additional chemical that was necessary to add in all other diesel systems in order to meet emissions standards.

3. Although Volkswagen successfully marketed and sold more than 1 million of these expensive cars nationwide as "green," Volkswagen has now publicly admitted that their environmentally-friendly representations were false . Volkswagen did not actually manufacture or sell cars with the desirable attributes advertised. Volkswagen's entire "CleanDiesel" system and marketing campaign was a fraud.

4. The United States government, through the Environmental Protection Agency ("EPA"), has passed and enforced laws designed to protect United States citizens from pollution and, in particular, certain chemicals and agents known to cause disease in humans. Automobile manufacturers must abide by these laws, and must adhere to EPA rules and regulations.

5. Volkswagen purposefully and intentionally breached these laws and regulations by manufacturing and then selling in the United States vehicles that made use of "defeat devices," which included computer software that was designed to "cheat" during emissio ns tests to make it appear as if the vehicles achieved certain low emissions levels that the vehicles did not in fact achieve while they were being driven. If the emissions tests reported the emissions levels the vehicles actually achieved while being dri ven, each vehicle tested would have failed the emissions test abysmally.

6. As stated by Cynthia Giles, Assistant Administrator for the Office of Enforcement and Compliance Assurance at the EPA, in a September 18, 2015 press release: "Using a defeat device in cars to evade clean air standards is illegal and a threat to public health."

VW FOIA, EPA 06/20/2017 2017-FFP_036301

7. According to the EPA and other sources, Volkswagen installed a "defeat device" in at least the following diesel models of its vehicles (the " Affected Vehicles"): Model Year ("MY") 2009 -2015 VW Jetta; MY 2009 -2014 VW Jetta SportW agen; MY 2012 -2015 VW Beetle; MY 2012 -2015 VW Beetle C onvertible; MY 2010 -2015 VW Golf; MY 2015 Golf SportWagen; MY 2012-2015 VW Passat; MY 2014 VW Touareg; MY 2009-2014 Audi A1; MY 2009-2014 Audi A3; MY 2009-2014 Audi A4; MY 2009 -2014 Audi A5; MY 2009 -2014 Audi A6; MY 2009 -2014 Audi Q3; MY 2009 -2014 Audi Q5; MY 2009 -2014 Audi TT; MY 2016 Audi A6 Quattro; MY 2016 Audi A7 Quattro; MY 2015-2016 Audi A8; MY 2016 Audi A8L; MY 2015-2016 Audi Q5 ; MY 2015 -2016 Audi Q7 ; and MY 2014 -2016 Porsche Cayenne . Investigations are currently under way to determine whether Volkswagen installed the device in additional models, so discovery may reveal that additional vehicle models and/or model years are properly included a s "Affected Vehicles." As new facts are discovered, additional vehicle models and/or model years may be added to this list.

8. While initial reports named limited models of "4 -cylinder Volkswagen and Audi vehicles from model years 2009 -2015," within days of the Notice of Violation (" NOV") being issued by the EPA, Volkswagen issued a press release that provided further details on the breadth of the Company's misconduct. Volkswagen reported that "[f]urther internal investigations conducted to date have established that the relevant engine management software is also installed in other Volkswagen Group vehicles with diesel engines…Discrepancies related to vehicles with Type EA 189 engines, involving some eleven million vehicles worldwide." This news was quickly reported by news outlets across the world, including a September 22, 2015 article in *The New York Times* entitled "Volkswagen Says 11 Million Cars Worldwide Are Affected in Diesel Deception."

VW FOIA, EPA 06/20/2017 2017-FFP_036302

9. The following week, owners of 2.0L 4-cylinder vehicles identified from Volkswagen's records as not complying with emissions standards, including Plaintiff, received a letter from VW USA President and Chief Executive Officer ("CEO") Michael Horn , offering a "personal and profound apology." The letter, among other things, set forth the following:

> Earlier this month, Volkswagen Group of America, Inc., and Volkswagen AG received notice from the U.S. Environmental Protection Agency, U.S. Department of Justice, and the California Air Resources Board, informing us th at those agencies had determined that certain 2.0L 4-cylinder TDI vehicles do not comply with emissions standards. According to our records, you own or lease one of these vehicles.
>
> I am writing you today to offer a personal and profound apology. Volkswa gen has violated your trust. I understand and fully appreciate your anger and frustration. I would like you to know that we take full responsibility and are cooperating with all responsible agencies. I can also assure you that we are committed to making this right for you – and taking steps to prevent something like this from ever happening again.
>
> Right now, we are working hard on remedies to bring your vehicles into emissions compliance as soon as possible. Getting this right will take some time, but we will notify you immediately once we have more information. Until then, please know that your vehicle remains both safe to drive and legal to drive, as noted by the EPA in its September 18 press release. You do not need to take any action at this time ; all we ask for is your patience.
>
> Along with our parent company, Volkswagen AG, we are committed at every level of our company to do what must be done to regain your trust.

10. On November 3, 2015, a day after it denied several new allegations from a second NOV issued by the EPA alleging that it had installed software to skirt emissions testing on more cars than previously admitted, Volkswagen announced that its internal investigation had uncovered emissions irregularities in an additional 800,000 vehicles. While Volkswagen stated that a reliable assessment of the scale of these irregularities was not yet possible, it estimated that the estimated risk of this discovery would be approximately $2.2 billion.

11. Instead of delivering on its promise of extremely hig h fuel mileage coupled with low emissions, Volkswagen devised a way to make it appear that its cars complied with EPA

VW FOIA, EPA 06/20/2017 2017-FFP_036303

regulations when, in fact, they did not. As detailed in the E PA's September NOV, Volkswagen violated consumers' trust by employing sophisticated software in the Affected Vehicles to detect when vehicles are undergoing offic ial emissions testing, and turn full emissions controls on solely for the purposes of such tests. In all other circumstances, however, the emissions controls are suppres sed. This results in cars that meet emissions standards in the laboratory or state testing station but, at all other times when the vehicle is running, emit nitrogen oxides ("NOx") at up to 40 times the standard allowed under United States laws and regula tions. This software, as produced and used by Volkswagen, is a "defeat device" as defined by the Clean Air Act.

12. NOx pollution contributes to nitrogen dioxide, ground-level ozone, and fine particulate matter. Exposure to these pollutants has been linked with serious health dangers, including asthma attacks and other respiratory illness es serious enough to send people to the hospital. Ozone and particulate matter exposure, in particular, have been associated with premature death due to respiratory-related or cardiovascular-related consequences. Children, the elderly, and people with pre-existing respiratory illness are at acute risk of negative health effects from these pollutants.

13. According to a working paper by three researchers affiliated with the Na tional Bureau of Economic Research , reduced NOx emissions that resulted from new power plant regulations resulted in about five fewer deaths for every 100,000 people each year, as well as a decrease in spending on prescription drugs. Extrapolating from th at research, the estimated 46,000 tons of extra NOx emissions from Volkswagen's TDI vehicles in the U.S. since 2008 has caused 106 deaths in the U.S. Another researcher, at the Massachusetts Institute of Technology, using EPA data on mortality rates stemm ing from particulate pollutants produced by NOx , concluded that the number of deaths attributable to Volkswagen's deception could be as high as

VW FOIA, EPA 06/20/2017 2017-FFP_036304

146 people. That number does not include the direct effects of NOx pollution or smog, and it does not include t he number of people who suffer from non -fatal health consequences of the extra NOx related pollutants that flooded the air due to Volkswagen's heinous scheme.

14. The Clean Air Act has strict emissions standards for vehicles, and requires that vehicle manufacturers certify to the EPA that vehicles sold in the United States meet applicable federal emissions standards meant to control air pollution. Every vehicle sold in the United States must be covered by an EPA -issued certificate of conformity. Under federal law, cars equipped with defeat devices, which reduce the effectiveness of emissions control systems during normal driving conditions, cannot be certified by the EPA. By manufacturing and selling cars with defeat devices that allowed for higher level s of emissions than the EPA permits, and certifying to the EPA that such vehicles were compliant with the Clean Air Act, Volkswagen violated the Clean Air Act, defrauded its customers, and engaged in unfair competition under state and federal law.

15. Volkswagen has charg ed a substantial premium for its diesel vehicles , which are paradoxically marketed by Volkswagen as "CleanDiesel" vehicles. For example, the base S model of the 2015 Volkswagen Jetta has a starting MSRP of $18,780. The base TDI S CleanDiesel, however, has a starting MSRP of $21,640, a price premium of $2,860. The CleanDiesel premium for the highest model Jetta is even more significant. The highest level gas Jetta SE has a starting MSRP of $20,095, while the CleanDiesel TDI SEL MSRP is $26,410 . Thus, a consumer who purchased the highest model of the C leanDiesel Jetta may have paid a $6,315 premium for a benefit that he or she was not actually receiving.

16. Similar premiums arise across all of Volkswagen's diesel vehicles, ranging from over $2,000 to nearly $10,000.

VW FOIA, EPA 06/20/2017 2017-FFP_036305

17. Volkswagen has been ordered by the EPA to recall the Affected Vehicles and perform repairs that will ensure that the vehicles comply with EPA emissions requirements at all times during normal operation. As of October 9, 2015, Volkswagen had disseminated notice of a "service campaign" to owners of Volkswagen 2.0L 4 -cylinder TDI vehicles, including Plaintiff, informing them that Volkswagen was "proceeding as quickly as possible" to "work on the remedy and review it with the government." Volkswagen will not be able to make the Affected Vehicles comply with emissions standards, however, without substantially downgrading their performance characteristics, including their horsepower and their efficiency. As a result, even if Volkswagen is ab le to make the Affected Vehicles EPA -compliant, Class members will still suffer actual harm and damages, as their vehicles will no longer perform as they did when purchased and as advertised. This will necessarily result in a diminution of value of every Affected Vehicle, and it will cause owners of Affected Vehicles to pay more for fuel when using the cars subsequent to the repairs.

18. Volkswagen's fraudulent scheme was facilitated and aided and abetted by Defendant Bosch, which created the software program used in Volkswagen's defeat device. As early as 2007, Bosch warned Volkswagen that using its software in vehicles that were driven on the road would constitute a criminal offense. Nevertheless, Bosch proceeded to sell or license 11,000,000 of the compone nt devices to Volkswagen over the next seven years knowing that Volkswagen intended to use them in production vehicles. Instead of refusing to provide Volkswagen with the defeat devices that Bosch knew would enable Volkswagen to engage in criminal fraud, Bosch decided instead to profit from Volkswagen's fraud by selling the 11,000,000 units. Under American law, that decision to profit from what Bosch knew was Volkswagen's ongoing fraud makes Bosch and aider and abettor of that crime and a RICO co -

VW FOIA, EPA 06/20/2017 2017-FFP_036306

conspirator with Volkswagen that is jointly liable for treble the damages that Volkswagen's fraud has caused U.S. consumers.

19. As a result of Volkswagen's unfair, deceptive, and/or fraudulent business practices, the Bosch-Volkswagen RICO conspiracy, and Volkswagen's failure to disclose that, under normal operating conditions, the Affected Vehicles emit up to 40 times the allowed levels of pollution, owners and lessees of the Affected Vehicles have suffered losses in money and/or property.

20. Moreover, due to the scale of Volkswagen's deliberate fraud, there has been exhaustive media coverage of the emissions scandal throughout the world, placing the Company under a spotlight for its extreme dishonesty and changing consumers' opinions about Volkswagen's diesel vehicles. Defendants engaged in a scheme to defraud and made numerous materially false and misleading statements and omissions regarding Volkswagen's operations, in order to increase Volkswagen's market share in the United States. Defendants' use of illegal defeat devices allowed Volkswagen to market all of its diesel vehicles to environmentally-conscious consumers, increasing its sale of diesel cars in the United States and, as a result, the profitability of the entire enterprise.

21. Had Plaintiff and the other Class members known of the presence of the "defeat device" at the time they purchased their Affected Vehicles, they would not have purchased those vehicles, or they would have paid substantially less for the Affected Vehicles than they did. Moreover, when Volkswagen recalls the Affected Vehicles in order to make them compliant with EPA standards, the owners and lessees of the Affected Vehicles will be required to spend additional money on fuel and will not obtain the performance that was characteristic of their

VW FOIA, EPA 06/20/2017 2017-FFP_036307

vehicles at the time of purchase. The Affected Vehicles will necessarily be worth less in the marketplace because of this decreased performance and efficiency.

PARTIES

22. Plaintiff Robert F. Eslick is an individual residing in Old Bethpage, Nassau County, New York. Plaintiff purchased a 2013 Passat TDI SEL Premium from Platinum Volkswagen in Hicksville, New York on or about February 20, 2013. Plaintiff had been a loyal Mercedes-Benz customer for decades, but decided to purchase a Volkswagen TDI vehicle based on Volkswagen's representations that it combined high mileage and good fuel economy with being good for the environment. After the emissions scandal broke, Plaintiff felt shocked and violated by the utter dishonesty of Defendants, and worries that he will not be able to sell his car at all and, if he is able to do so, recognizes that he will have to sell for a substantial discount. Plaintiff has received several notices from Volkswagen that his vehicle is affected by the emissions scandal.

23. Defendant VW USA is a corporation organized under the laws of the State of New Jersey, with its principal place of business at 2200 Ferdinand Porsche Drive, Herndon, Virginia 20171. Volkswagen does business in every state and the District of Columbia, but is a citizen of New Jersey and Virginia pursuant to 28 U.S.C. § 1332(d)(10).

24. Defendant Volkswagen Aktiengesellschaft, doing business as Volkswagen Group and/or Volkswagen AG, is a corporation organized and existing under the laws of Germany, with its principal place of business located in Wolfsburg, Germany. V W AG is the parent corporation of VW USA.

25. Defendant Winterkorn is a resident of Germany and was the Chief Executive Officer ("CEO") of VW AG until he resigned on September 23, 2015, in the wake of the diesel

VW FOIA, EPA 06/20/2017 2017-FFP_036308

emissions scandal. Notably, Mr. Winterkorn was widely regarded as a detail-oriented, micromanaging CEO who "r etained control over engineering details that many other CEOs would relinquish fully to deputies" and reportedly hand -picked the engineers who designed the defeat devices. Mr. Winterkorn is currently being investigated by the German government for allegations of fraud.

26. Defendant Winterkorn received compensation from the illegal scheme and course of conduct based on the revenues and profits from the Affected Vehicles, as well as Volkswagen's increased market share. Mr. Winterkorn approved, authorized, dire cted, ratified, and/or participated in the acts complained of herein. Mr. Winterkorn is subject to the personal jurisdiction of this Court as he has availed himself of the laws of the United States and Michigan through his management and control over VW U SA, as well as the manufacture, distribution, testing, and sale of hundreds of thousands of Affected Vehicles imported and sold across the United States, in this State, and in this District.

27. Defendant Horn is a resident of Virginia and serves as President and CEO of VW USA. Mr. Horn received compensation from the illegal scheme and course of conduct based on the revenues and profits from the Affected Vehicles, as well as Volkswagen's increased market share. Mr. Horn approved, authorized, directed, ratified, and/or participated in the acts complained of herein, and has admitted that he was aware of the Affected Vehicles' emissions non-compliance since at least 2014.

28. Defendant Bosch is a German multinational engineering and electronics company, headquartered in Stuttgart, Germany. At all times from at least January 1, 2007 through the present, Bosch supplied the defeat device to Volkswagen.

VW FOIA, EPA 06/20/2017 2017-FFP_036309

29. Defendants Does 1-25 are other persons or entities involved in the design, manufacture, sale, distribution, testing, and marketing of the Affected Vehicles and/or the defeat device and/or other auxiliary emissions devices installed therein.

30. At all times from January 1, 2008 through the present (the "Relevant Period"), Volkswagen manufactured, distributed, sold, leased, and warranted the Affected Vehicles under the Volkswagen, Audi, and Porsche brand names throughout the United States. Volkswagen and/or its agents designed, manufactured, and installed the "CleanDiesel" engines and engine control systems, including the "defeat device," in the Affected Vehicles. Volkswagen also developed and disseminated the owners' manuals and warranty booklets, advertisements, and other promotional materials relating to the Affected Vehicles.

JURISDICTION AND VENUE

31. This Court has jurisdiction pursuant to the Class Action Fairness Act of 2005, 28 U.S.C. § 1332(d), because there are at least 100 members of the proposed class, at least one of whom is a citizen of a different state than Defendants, and the aggregate claims of the proposed class members exceed $5,000,000, exclusive of interest and costs. This Court also has Federal Question jurisdiction pursuant to 28 U.S.C. § 1331 and supplemental jurisdiction over the state law claims pursuant to 28 U.S.C. § 1367.

32. This Court has personal jurisdiction over Defendants pursuant to 18 U.S.C. §§ 1965(b) and (d), and Michigan's long-arm statute, MCL § 600.705. This Court has personal jurisdiction over Defendants because they have minimum contacts with the United States and this State, and have intentionally availed themselves of the laws of Michigan by conducting a substantial amount of business throughout the State of Michigan and this District, including the manufacture, distribution, promotion, and/or sale of Affected Vehicles here, and because

VW FOIA, EPA 06/20/2017 2017-FFP_036310

Volkswagen committed the acts and omissions complained of herein, in part, in the State of Michigan and this District.

33. Venue is proper in this District under 28 U.S.C. § 1391 because: (i) Defendants conduct substantial business in this District and have intentionally availed themselves of the laws and markets of the United States and this District; and/or (ii) many of the acts and transactions giving rise to this action occurred in this District, including, *inter alia*, Defendants' promotion, marketing, distribution, and sale of the Affected Vehicles in this District. Defendants sell a substantial amount of automobiles in this District, and much of the misconduct occurred in this District. Venue is also proper under 18 U.S.C. § 1965(a), because Defendants are subject to personal jurisdiction in this District, as alleged above, and Defendants have agents located in this District. Additionally, Defendants' domestic engineering and environmental compliance activities are conducted from their Auburn Hills, Michigan offices, and VW USA's website sets forth that visitors to the website "consent to the exclusive jurisdiction of the state and federal courts for the County of Oakland, Michigan." Defendants also promoted the Affected Vehicles in the North American International Auto Show ("Detroit Auto Show"), which occurs annually in this District.

TOLLING OF THE STATUTE OF LIMITATIONS

A. Discovery Rule Tolling

34. The tolling doctrine was designed specifically for cases like this , where pertinent facts were concealed from Plaintiff. Thus, for the following reasons, any statutes of limitation s that might have otherwise applied have been tolled by the discovery rule with respect to all claims.

VW FOIA, EPA 06/20/2017 2017-FFP_036311

35. Even through the exercise of reasonable diligence, Plaintiff and other members of the Class could not have discovered, within any applicable statute of limitations, that Volkswagen was concealing and misrepresenting the true emissions levels of its vehicles or that Volkswagen was using defeat devices to bypass the EPA's emissions requirements.

36. As reported in *The Wall Street Journal* on September 18, 2015, th e International Council on Clean Transportation, together with researchers from West Virginia University, uncovered Volkswagen's use of defeat devices during comprehensive research and testing over the last couple of years. The International Council on Cl ean Transportation brought the issues to the attention of the EPA, which conducted further tests and ultimately discovered these "very serious" violations by Volkswagen. As defect devices were even used to "fool[] the emissions tests," Volkswagen's decept ion with respect to the Affected Vehicles was carefully concealed from both regulators and consumers.

37. Plaintiff and the other Class m embers could not have reasonably discovered, and could not have known of facts that would have caused a reasonable person t o suspect, that Volkswagen intentionally failed to report information within its knowledge to federal and state authorities, its dealerships, and its consumers.

38. Moreover, a reasonable and diligent investigation could not have disclosed that Volkswagen had information in its sole possession about the existence of its sophisticated emissions deception and that it had concealed that information, which was discovered by Plaintiff only very shortly before this action was file d. Plaintiff and other Class m embers could not have previously learned that Volkswagen valued profits over compliance with applicable federal and state emissions regulations and consumer law.

VW FOIA, EPA 06/20/2017 2017-FFP_036312

B. Fraudulent Concealment Tolling

39. Throughout the Relevant Period , all applicable statutes of limitation s have been tolled by Volkswagen's knowing and active fraudulent concealment and denial of the facts alleged in this Complaint.

40. Instead of disclosing its fraudulent emissions scheme, or that the emissions from the Affected Vehicles were far worse than had been represented, Volkswagen falsely represented to consumers and regulators that its vehicles complied with federal and state emissions standards, and that it was a reputable manufacturer whose representations could be trusted.

C. Estoppel

41. Volkswagen was und er a continuou s duty to disclose to Plaintiff and the other members of the Class the facts that it knew about the emissions from the Affected Vehicles, as well as information regarding the Affected Vehicles ' failure to comply with federal and state laws.

42. Volkswagen knowingly, affirmatively, and actively concealed the true nature, quality, and character of the emissions systems, and the emissions, of the Affected Vehicles, as well as the culture of dishonesty that appears to be pervasive throughout the organization.

43. Although Volkswagen had a duty, throughout the Relevant P eriod, to disclose to Plaintiff and the Class that it had engaged in the deception described in this Complaint, Defendants chose to evade federal and state emissions and clean air standards with respect to the Affected Vehicles. Furthermore, Volkswagen intentionally misrepresented its blatant and deceptive lack of compliance with state law regulating vehicle emissions and cl ean air.

44. Thus, Volkswagen is estopped from relying on any statutes of limitations in defense of this action.

VW FOIA, EPA 06/20/2017 2017-FFP_036313

FACTUAL ALLEGATIONS

45. Volkswagen intentionally designed and sold cars that misled both consumers and regulators about the amount of pollution those cars created and the fuel efficiency they produced.

46. Despite touting itself as an environmentally-conscious company that produced thoughtful cars for people who cared about the environment, Volkswagen knowingly and deliberately sold cars at greatly marked u p prices that produced pollution at up to 40 times the magnitude allowed by federal and state regulations.

47. Simultaneously, while Volkswagen was promoting itself as being environmentally-aware, Volkswagen intentionally and knowingly concealed the truth about the fuel efficiency and emissions of the Affected Vehicles.

A. Volkswagen Promotes its CleanDiesel Vehicles as Being Fuel Efficient and Environmentally-Friendly

48. For years, Volkswagen has advertised its diesel vehicles as low -emission, fuel - efficient ca rs. Indeed, this marketing message is at the core of Volkswagen' s image in the United States, stimulating a successful advertising campaign that has led Volkswagen to become the largest seller of diesel passenger vehicles in the country.

49. Volkswagen's success is based, in large part, on promotion of its diesel cars as "clean" and "green" vehicles. In fact, Volkswagen has promoted the Affected Vehicles under the name "CleanDiesel." Promotions of the CleanDiesel vehicles have centered on the alleged high fuel efficiency and "clean" engine of these vehicles.

50. Volkswagen touts its ostensible concern for the environment through means other than the names and purported attributes of its vehicles. For example, on the Volkswagen USA website, Volkswagen places an emphasis on its commitment to environmental sustainability, stating that this is "at the core of [its] operating philosophy." Volkswagen states that it does not

VW FOIA, EPA 06/20/2017 2017-FFP_036314

just talk about environmental sustainability, but rather the company "take[s] action, findi ng inventive ways to be responsible in everything [it] do[es]."

51. Volkswagen even states that it "take[s] steps to ensure that every vehicle [it] manufacture[s] is the best it can be in terms of its environmental properties." Notwithstanding these representations, Volkswagen was knowi ngly hiding its failure to even meet minimum emissions standards.

52. Volkswagen further bolster s its claims to be concerned for the environment by promoting the fact that the Audi A3 TDI and VW Jetta TDI were named the 2010 Green Car of the Year and the 2009 Green Car of the Year, respectively. Both awards have been rescinded since news of the emissions scandal broke.

53. Volkswagen also launched the "Think Blue" initiative, which the company explains is intended to help the company b ecome the world's most ecologically sustainable car manufacturer by 2018. As part of this initiative, Volkswagen claims, among other things, that it intends "to reduce the environmental burden produced by each vehicle and each component in production by 25% from 2010 to 2018" and that each "new Volkswagen should be at least 10% more efficient than its predecessor."

54. Beyond merely advertising its vehicles, Volkswagen supported and directed a website – *www.clearlybetterdiesel.org* – to promote its "clean" diesel technology. According to this website, Volkswagen's diesel technology reduces smog and "meets the highest standards in all 50 states, thanks to ultra-low sulfur diesel (ULSD) fuel and innovative engine technology that burns cleaner."

55. Volkswagen goes so far as to use the tagline "Truth in Engineering" to promote its Audi brand.

VW FOIA, EPA 06/20/2017 2017-FFP_036315

56. Unfortunately for consumers who paid Volkswagen's significant premiums to purchase "green" cars – and people who breathe the air into which the Affected Vehicles emit egregious amounts of pollutants – Volkswagen was far from truthful in promoting its CleanDiesel vehicles. Rather than promoting "environmentally conscious lifestyles," Volkswagen designed and sold cars that emit pollutants at extraordinary levels, failing state and federal environmental regulations by breathtaking margins.

B. Volkswagen Intentionally and Systematically Concealed the Excessive and Illegal Levels of Pollution Emitted by its Vehicles

57. Contrary to Volkswagen's representations that it is a "green" company committed to promoting the "greater good," many of its CleanDiesel cars produce illegal and unhealthy levels of pollution.

58. On September 18, 2015, the EPA issued an NOV to Volkswagen (the "September NOV"). The NOV explains that Volkswagen installed sophisticated software in the Affected Vehicles. This software detects when the vehicle is undergoing official emissions testing, an d turns on full emissions controls ***only*** during that test. At all other times that the vehicle is running, however, the emissions controls are deactivated, meaning that pollution is freely released into the environment at levels that far exceed those allow ed by federal and state clean air regulators. As defined by the Clean Air Act, the software produced and used by Volkswagen to falsify emissions testing results is a "defeat device."

59. Moreover, the September NOV alleges that Volkswagen knew or should have known that these defeat devices would "render inoperative elements of the vehicle design related to compliance with…emissions standards," because of "the design of these defeat devices." The software was specifically designed to "track the parameters of t he federal test procedure and

VW FOIA, EPA 06/20/2017 2017-FFP_036316

cause emission control systems to underperform when the software determined that the vehicle was not undergoing the federal test procedure."

60. On November 2, 2015, the EPA issued a second NOV to Volkswagen, detailing its determination that Volkswagen "manufactured and installed defeat devices in certain model year 2014 -2016 diesel light -duty vehicles equipped with 3.0 liter engines" (the "November NOV"). According to the November NOV, the defeat devices installed in the A ffected Vehicles described therein cause those vehicles to employ a different injection timing, exhaust gas recirculation rate, and common rail fuel pressure, leading to higher levels of NOx from the engine and reduced exhaust temperatures. Depending on t he model type of the vehicle and the type of drive cycle (*e.g.*, city, highway, etc.), "tailpipe emissions of NOx are up to 9 times the applicable NOx standard levels." As with the September NOV, the EPA stated that, "given the design of these defeat devic es," Volkswagen "knew or should have known that the software described…bypasses, defeats, or renders inoperative elements of the vehicle design related to compliance with…emission standards."

61. Most modern engines, including Volkswagen's CleanDiesel engines, use computerized engine control systems to monitor sensors throughout a car's engine and exhaust systems and control operation of the car's systems to ensure optimal performance and efficiency. These functions can include controlling fuel injection, valv e and ignition timing and, as in Volkswagen's CleanDiesel engines, operating the engine's turbocharger. The en gine control computer can, for example, ensure that the air-to-fuel mixture is correct, based on sensor readings such as throttle position, amount of air flowing into the engine, and engine temperature.

62. Engine control computers also receive data from sensors in the car's exhaust system, which measure the amounts of chemical substances included in the car's exhaust. This

VW FOIA, EPA 06/20/2017 2017-FFP_036317

data provides a measure of the engine's operation and efficiency, and is thus used by the engine control computer in operating the car's systems to ensure the desired performance and efficiency.

63. The ability of modern cars to use these sophisticated computers and sensors throughout the car's systems allows emissions testing to make use of a car's existing sensors to measure the presence of pollutants and track compliance with EPA and state emissions standards. Emissions testing stations, for example, plug a diagnostic device into the car's on-board diagnostics ("OBD II") port, and use the car's exhaust sensors during the testing procedure, in order to measure the substances emitted. Some states, instead of or in addition to an OBD II diagnostic device, use a measurement probe inserted into the car's exhaust pipe to measure the chemicals emitted by the vehicle.

64. Volkswagen programmed the engine control computers in the Affected Vehicles with software that first detects when the cars are undergoing emissions testing, and then operates the car's engine and exhaust systems to fool the test. Only when the vehicle is undergoing emissions testing will the engine control computers in the Affected Vehicles ensure that emissions comply with EPA pollution standards. When the car is not undergoing emissions testing (*i.e.*, when it is being used by consumers), the engine control systems operate the vehicle in a manner that does not comply with EPA emissions requirements.

65. Essentially, the defeat device software used by Defendants allows Defendants' CleanDiesel vehicles to meet emissions standards in labs or state testing stations, while permitting the vehicles to emit NOx at up to 40 times the standard allowed under United States laws and regulations during normal operation of the vehicles. NOx pollution contributes to nitrogen dioxide, ground-level ozone, and fine particulate matter. Exposure to such pollutants can lead to hospitalization for various serious respiratory illnesses, as well as premature death

VW FOIA, EPA 06/20/2017 2017-FFP_036318

due to respiratory -related or c ardiovascular-related effects. Children, the elderly, and people with pre-existing respiratory illnesses are particularly at risk. Researchers have estimated that the extra 46,000 tons of NOx that Volkswagen's Affected Vehicles have spewed into the atmosphere in the U.S. since 2008 has caused 106 to 146 or more deaths in the U.S.

66. Due to the serious health risks posed by such pollutants, the Clean Air Act obligates vehicle manufacturers to comply with strict emissions standards, and to certify to the EPA that all vehicles sold in the United States meet applicable federal emissions standards to control air pollution. In fact, every vehicle sold in the United States must be covered by a certificate of conformity issued by the EPA. Under federal law, cars eq uipped with defeat devices, which reduce the effectiveness of emissions control systems during normal driving conditions, cannot be certified.

67. By manufacturing, promoting, and selling cars with defeat devices that enabled the Affected Vehicles to pass emis sions tests before shutting down and releasing exorbitant levels of pollutants into the air, Volkswagen violated the Clean Air Act, misled regulators, defrauded its customers, and engaged in unfair competition under state and federal laws.

68. In fact, Volks wagen AG's top United States executive, Michael Horn, admitted that the "company was dishonest with the EPA and the California Air Resources board, and with all of you," and that the company had "totally screwed up." In spite of that admission, Horn protested that "[t]his kind of behavior is totally inconsistent with [Volkswagen's] qualities."

69. According to *The New York Times* , however, Volkswagen executives admitted that the CleanDiesel "vehicle s it sold in the United States u sed software meant to cheat on the [emissions] tests" only ***after*** the EPA "took the extraordinary action of threatening to withhold approval for the company's 2016 Volkswagen and Audi diesel models." Again, when

VW FOIA, EPA 06/20/2017 2017-FFP_036319

confronted with a second NOV from the EPA, Volkswagen initially denied the claims, emphatically stated that "no software has been installed in the 3.0 liter V6 diesel power units to alter emissions characteristics in a forbidden manner." The day after Volkswagen issued this denial, the company admitted that its own internal investigation had, in fact, discovered emissions irregularities in about 800,000 additional vehicles.

70. Bosch supplied Volkswagen with the software used in the defeat device and sold or licensed 11,000,000 units of its component de vice to Volkswagen knowing that Volkswagen intended to install them in its production line TDI vehicles and to sell them to consumers in America and elsewhere around the world. Bosch, thereby, knew it was facilitating and assisting Volkswagen in what Bosch itself identified, as early as 2007, would be a criminal fraud.

71. According to German and French newspaper reports, a team currently conducting a Volkswagen internal review of the scandal uncovered a 2007 letter from Bosch to Volkswagen in which Bosch warned that using its software in production vehicles would constitute an "offense." Nevertheless, Bosch proceeded to deliver 11,000,000 units of its defeat device to Volkswagen knowing that Volkswagen intended to commit the very "offense" Bosch had anticipated, and Bosch profited handsomely from its sales to Volkswagen.

72. In a September 24, 2015 press release, Bosch admitted that it had " supplied the common-rail injection system as well as the supply and dosing module for exhaust-gas treatment," but it attempte d to distance itself from the Volkswagen fraud by claiming that "Bosch supplie[d] these components to the automaker's specifications" and that "[h]ow these components [were] calibrated and integrated into complete vehicle systems is the responsibility of each automaker." Bosch's "hear no evil, see no evil" rationale for knowingly profiting from Volkswagen's crimes does not enable Bosch to escape civil liability under American law. Bosch

VW FOIA, EPA 06/20/2017 2017-FFP_036320

knew Volkswagen intended unlawfully to use its defeat device software in production vehicles. Instead of preventing that fraud by refusing to sell the devices to Volkswagen under those circumstances, Bosch elected to facilitate and profit from Volkswagen's fraud. Consequently, Bosch is just as responsible for the harm Volkswagen has caused as Volkswagen itself.

73. By continuing to sell millions of the defeat devices to Volkswagen, Bosch knew it was aiding and abetting criminal fraud and wire fraud in the United States, and it knowingly participated in a RICO conspiracy.

C. Defendants Have Profited Enormously from their CleanDiesel Vehicles

74. Volkswagen charges substantial premiums for the Affected Vehicles. For example, the starting MSRP for the base model of the Volkswagen Passat with a gasoline engine is $21,340. In order to purchase the base model of a Volkswagen Passat that is outfitted with a CleanDiesel engine, however, an individual would need to spend a minimum of $27,095 – a $5,755 premium over the base price of the comparable gasoline engine model. Consumers are willing to pay this 27% premium because they believe they are driving a vehicle that is EPA-compliant and environmentally-friendly, but this is not the case with the Affected Vehicles.

75. These premiums occur across all of the vehicles in which Defendants installed a defeat device for emissions testing. As an example, the table below sets forth the price premium, for many of the Affected Vehicles, of a CleanDiesel model as opposed to a comparable model with a gasoline engine, both as a percentage and in terms of dollar value. These premiums are based on the starting MSRP for the base model of each type of Affected Vehicle and its non-CleanDiesel counterpart.

Model	Gas Engine MSRP	CleanDiesel MSRP	Premium (%)	Premium ($)
VW Jetta	$18,780	$21,640	15%	$2,860
VW Beetle	$20,695	$25,330	22%	$4,635

VW FOIA, EPA 06/20/2017 2017-FFP_036321

Model	Gas Engine MSRP	CleanDiesel MSRP	Premium (%)	Premium ($)
VW Golf	$20,175	$22,345	11%	$2,170
VW Passat	$21,340	$27,095	27%	$5,755
VW Touareg	$44,705	$52,245	17%	$7,540
Audi A3	$30,900	$33,200	7%	$2,300
Audi A6	$49,900	$59,500	19%	$9,600
Audi Q5	$42,750	$48,100	13%	$5,350
Porsche Cayenne	$58,300	$62,300	7%	$4,000

76. Even higher premiums were charged with respect to many non -base models of the Affected Vehicles. The highest level gas Jetta SE has a starting MSRP of $20,095, while the CleanDiesel TDI SEL MSRP is $26,410 , a $6,315 premium . Premiums across the Affected Vehicles ranged from more than $2,000 to nearly $10,000.

77. Making the conservative assump tion that the average premium charged for the 11,000,000 Affected Vehicles sold worldwide was $3,000, Volkswagen's fraud yielded $33,000,000,000 in excess illicit profits or revenues to Volkswagen. That estimate assumes also that every Volkswagen TDI purchaser would have bought another Volkswagen model if the truth about the CleanDiesel TDI models were known at the time of sale. The estimate does not include additional profits that Volkswagen earned by drawing market share away from its competitors via consumers who were deceived into buying a Volkswagen or Audi TDI model rather than a gasoline or diesel model offered by a competitor.

78. Bosch earned excess illicit profits and revenues by selling or licensing to Volkswagen 11,000,000 units of the defeat dev ice component that it would not have sold but for Volkswagen's fraud, and which Bosch should not have sold given it knew that Volkswagen intended to commit fraud by installing those component units into production line vehicles that would be sold to the public.

VW FOIA, EPA 06/20/2017 2017-FFP_036322

D. Defendants' Illegal Actions Have Caused Plaintiffs and the Class Significant Harm

79. Although the EPA has notified Volkswagen that the EPA will likely order a recall of the Affected Vehicles requiring Volkswagen to repair them so that they comply with EPA emissions requirements at all times, purchasers of the Affected Vehicles have suffered and will continue to suffer significant harm as a result of Defendants' illegal acts.

80. First, Volkswagen will not be able to make the Affected Vehicles comply with emissions standards without substantially degrading the performance and mileage characteristics Volkswagen promoted to consumers. As a result, even if Volkswagen is able to make the Affected Vehicles EPA-compliant, Plaintiff and the Class will be unable to sell their Affected Vehicles for the price expected based on the performance of the vehicles when purchased and as advertised, thereby damaging Plaintiff and the Class.

81. Second, even if Volkswagen is able to make the Affected Vehicles compliant with EPA emissions standards, the recall remedy will necessarily result in a diminution in the value of each Affected Vehicle. Plaintiff and Class members paid significant premiums for cars that will now have greatly reduced residual value due to their reduced performance and mileage . In fact, an October 2015 article in *The Wall Street Journal* quotes analysts from Kelley Blue Book as stating that resale values of Volkswagen's diesel cars have fallen by an average of 13% in the weeks since the emissions scandal emerged. Though less severe, Volkswagen's gasoline models have also experienced a decline in resale values over the same period.

82. According to *The New York Times* , Volkswagen has said that it will be "setting aside the equivalent of half a year's profits – 6.5 billion euros, or about $7.3 billion – to cover the cost of fixing the cars to comply with pollution standards and to cover other expenses, which are likely to include fines as well as responses to civil lawsuits from angry customers." Even

VW FOIA, EPA 06/20/2017 2017-FFP_036323

Volkswagen's beleaguered former Chief Executive Officer, Martin Winterkorn, referred to the way in which the company deceived consumers and regulators as "manipulation." Winterkorn has already announced his resignation due to the scandal.

83. As a result of Volkswagen's unfair, deceptive, and fraudulent business practices, and its failure to disclose that the Affected Vehicles typically emit up to 40 times the permissible levels of pollutants, and as a result of Bosch's facilitation of Volkswagen's fraud, Class members have suffered losses in money and/or property.

84. According to research by scientists at Harvard University and the Massachusetts Institute of Technology, taking into account the risk posed by excess emissions from Volkswagen's rigging of its diesel cars to cheat on emissions tests, by the end of 2016, approximately 60 people in the United States have died or will die earlier than they otherwise would have. According to the study, the estimated cost of these deaths to the economy is about $450 million. The report also found that the healthcare study in the U.S. would be affected, with "approximately 31 cases of chronic bronchitis, 34 hospital admissions, 120,000 minor restricted activity days, 21,000 lower respiratory symptom days, and 33,000 days of increased bronchodilator usage."

85. Had Plaintiff and other members of the Class known of the presence of the defeat device at the time they purchased their Affected Vehicles, they would not have purchased those vehicles, or would have paid substantially less than they did for those vehicles.

86. Moreover, when Volkswagen recalls the Affected Vehicles and repairs the CleanDiesel engine performance in order to make the Affected Vehicles complaint with EPA emissions standards, Plaintiff and other Class members will be required to spend more on fuel and will no longer benefit from the performance qualities of their vehicles as advertised. This

VW FOIA, EPA 06/20/2017 2017-FFP_036324

will likely cause a sharp decline in the sale prices of the Affected Vehicles, should owners of the Affected Vehicles attempt to sell their cars.

87. In order to achieve the drastic drop in NOx emissions required for the Affected Vehicles to comply with EPA regulations, the cars will have to sacr ifice some fuel economy, or performance. In addition to a drop in gas mileage, attempting to make the Affected Vehicles EPA-compliant will also likely require some drop in torque, which allows diesel vehicles to really accelerate off the line – one of the features owners of diesel vehicles value most.

88. An alternative to recalibrating the defeat device software so that the Affected Vehicles always run the way they do during EPA testing is to add a urea tank to the Affected Vehicles. The standard way of maki ng diesel vehicles run cleanly is to use selective catalytic reduction, a chemical process that breaks NOx down into nitrogen and water. Part of this process, which is used by other diesel manufacturers like Mercedes and BMW, involves adding urea to the mix. While this system is incredibly effective in that it can eliminate between seventy and ninety percent of NOx emissions, it adds both complication and cost to the equation. The system costs between $5,000 and $8,000 per car, and consumers need to peri odically add the urea-based solution to their vehicles in order to keep them running. In addition, making room for the urea tank could mean sacrificing cargo space or giving up the spare tire.

89. Volkswagen's fraudulent scheme to conceal substantial defects in the Affected Vehicles placed profit over the safety of its customers and the health of the environment, ca using serious harm to consumers, leasing agencies, and rental car companies nationwide.

90. While Defendant Winterkorn, who resigned from his position as CEO of VW AG on September 23, 2015 in the wake of the scandal, has apologized for breaking the trust of the company's customers and the public, such candor after years of misrepresentations and

VW FOIA, EPA 06/20/2017 2017-FFP_036325

omissions of material information is presumptively a public relations effort at damage control and insincere, and it does not compensate Plaintiff and other members of the Class for the damages they have incurred as a result of Defendants' illegal actions.

91. The United States Department of Justice will conduct a criminal investigation into Volkswagen after the company admitted to developing software that allowed its diesel cars to circumvent emissions testing, in violation of the Clean Air Act . The New York State Attorney General, in collaboration with state attorneys general throughout the country, will also investigate Volkswagen's attempts to evade environmental protection laws and its practice of "promis[ing] consumers a fake bill of goods." According to a *USA Today* editorial, "[t]he simple word for the accusation against VW is cheating, and on a grand scale."

CLASS ACTION ALLEGATIONS

92. Plaintiff brings this action on behalf of itself and as a class action, pursuant to the provisions of Rules 23(a), (b)(2), and (b)(3) of the Federal Rules of Civil Procedure on behalf of the following class and subclass (collectively, the "Class" or "Classes"):

The Nationwide Class

All persons or entities in the United States who are current or former owners and/or lessees of an "Affected Vehicle." Affected Vehicles include, without limitation, all vehicles described in Paragraph 7 herein.

The Michigan Subclass

All persons or entities in the State of Michigan who are current or former owners and/or lessees of an "Affected Vehicle." Affected Vehicles include, without limitation, all vehicles described in Paragraph 7 herein.

The New York Subclass

All persons or entities in the State of New York who are current or former owners and/or lessees of an "Affected Vehicle." Affected Vehicles include, without limitation, all vehicles described in Paragraph 7 herein.

VW FOIA, EPA 06/20/2017 2017-FFP_036326

93. Excluded from the Class are employees or agents of Defendants and their subsidiaries and affiliates, all persons who make a timely request to be excluded from the Class, all governmental entities, and the judge to whom this case is assigned and his or her immediate family. Plaintiff reserves the right to revise the Class definition based upon information learned through discovery.

94. Certification of Plaintiff's claims for class-wide treatment is appropriate because Plaintiff can prove the elements of its claims on a class-wide basis using the same evidence as would be used to prove those elements in individual actions alleging the same claim.

95. This action has been brought and may be properly maintained on behalf of the Class proposed herein under Federal Rule of Civil Procedure 23.

96. The members of the Class es are so numerous and geographically dispersed that individual joinder of all Class members is impracticable. The precise number of Class members is unknown to Plaintiff at this time, but may be ascertained from Volkswagen's records. Plaintiff is informed and believes that there are thousands of Class members. Class members may be notified of the pendency of this action by recognized, Court-approved notice dissemination methods, which may include U.S. mail, electronic mail, Internet postings, and/or published notice.

97. This action involves common questions of law and fact, which predominate over any questions affecting individual Class members, including, without limitation:

(a) Whether Defendants engaged in the conduct alleged herein;

(b) Whether Defendants designed, advertised, marketed, distributed, leased, sold, or otherwise placed Affected Vehicles into the stream of commerce in the United States;

VW FOIA, EPA 06/20/2017 2017-FFP_036327

(c) Whether the CleanDiesel engine system in the Affected Vehicles contains a defect in that it does not comply with EPA requirements;

(d) Whether the CleanDiesel engine systems in the Affected Vehicles can be made to comply with EPA standards without substantially downgrading the performance and/or efficiency of the Affected Vehicles;

(e) Whether Defendants knew about the "defeat device" and, if so, for how long;

(f) Whether Volkswagen designed, manufactured, marketed, and distributed Affected Vehicles with a "defeat device;"

(g) Whether Defendants' conduct violates RICO, consumer protection statutes, warranty laws, and other laws asserted herein;

(h) Whether Plaintiff and the other members of the Class es overpaid for their Affected Vehicles and suffered losses of rental income;

(i) Whether Plaintiff and the other members of the Classes are entitled to equitable relief including, but not limited to, restitution or injunctive relief; and

(j) Whether Plaintiff and the other members of the Class es are entitled to treble damages and other monetary relief and, if so, in what amount.

98. Plaintiff's claims are typical of the other Class members' claims because, among other things, all Class members were comparably injured through the wrongful conduct of Volkswagen, as described above.

99. Plaintiff is an adequate Class representative because his interests do not conflict with the interests of the other members of the Class es he seeks to rep resent. Furthermore, Plaintiff has retained counsel competent and experienced in complex class action litigation. The

VW FOIA, EPA 06/20/2017 2017-FFP_036328

Classes' interests will be fairly and a dequately protected by Plaintiff, who intends to prosecute this action vigorously, and by Plaintiff's skilled and experienced counsel.

100. Volkswagen has acted or refused to act on grounds generally applicable to Plaintiff and the other members of the Class es, thereby making appropriate final injunctive and declaratory relief, as described below, with respect to the Class as a whole.

101. A class action is superior to any other available means for the fair and efficient adjudication of this controversy, and no unusu al difficulties are likely to be encountered in the management of this class action. The damages or other financial detriment suffered by Plaintiff and the other Class members are relatively small compared to the burden and expense that would be required to individually litigate their claims against Volkswagen, so it would be impracticable for members of the Classes to individually seek redress for Volkswagen's wrongful conduct.

102. Even if Class members could afford individual litigation, the court system cou ld not. Individualized litigation creates a potential for inconsistent or contradictory judgments, and increases the delay and expense to all parties and to the court system. By contrast, the class action device presents far fewer management difficulties , and provides the benefits of single adjudication, economy of scale, and comprehensive supervision by a single court.

A. Claims Brought on Behalf of the Nationwide Class

COUNT I
Violation of The Racketeer Influenced And Corrupt Organizations Act ("RICO")
(18 U.S.C. § 1962(c))

103. Plaintiff realleges and incorporates by reference all preceding paragraphs as though fully set forth herein.

104. The Defendants are all "persons" under 18 U.S.C. § 1961(3).

VW FOIA, EPA 06/20/2017 2017-FFP_036329

105. The Defendants violated 18 U.S.C. § 1962(c) by participating in or conducting the affairs of the RICO Enterprise through a pattern of repeatedly defrauding consumers. The methodology of the fraud is set forth a bove and as described in this Count. The persons participating in the Enterprise and their respective roles in the Enterprise are set forth below.

106. This Count is asserted by Plaintiff on behalf of the Nationwide Class an d the respective Subclasses.

107. For purposes of Count I, Volkswagen and Bosch are RICO co-conspirators. The Bosch-Volkswagen conspiracy undertook a fraudulent scheme to create a defeat device and to install it in Affected Vehicles that were sold in the United States and elsewhere through the use of false and misleading statements and omissions re lating to the qualities of the emissions controls installed in those vehicles through the use of the U.S. Mails, and interstate and international wire, radio and television transmissions.

108. At all relevant times and as describe d above, Defendants carried out their scheme to defraud Plaintiff and other members of the Classes, in connection with the conduct of an "enterprise" within the meaning of 18 U.S.C. § 1961(4).

109. The Enterprise consisted of the following persons, and others presently unknown, who constitute an "association-in-fact enterprise" within the meaning of RICO and who collectively constitute the "Fraudulent 'CleanDiesel' Enterprise" or "Enterprise":

(1) Volkswagen USA;

(2) Volkswagen AG;

(3) Martin Winterkorn;

(4) Michael Horn;

(5) Bosch; and

VW FOIA, EPA 06/20/2017 2017-FFP_036330

(6) Does 1-25.

110. The Fraudulent "CleanDiesel" Enterprise, whose activities affected interstate and foreign commerce, is an association-in-fact of individuals and corporate entities within the meaning of 18 U.S.C. § 1961(4) and consists of persons associated together for the common purpose of sel ling the Affected Vehicles that the membe rs of the Enterprise knew could not provide the results promised to consumers.

111. The Fraudulent "CleanDiesel" Enterprise was formed in 2007 or earlier and continued to at least 2015, if not to this day. That RICO Enterprise en gaged in a pattern of racketeering activity by placing the Affected Vehicles into commerce over a seven year period from 2008 to 2015, collecting tens of billions of dollars of illicit profits as a result.

112. The Fraudulent "CleanDiesel" Enterprise is separat e and distinct from the pattern of racketeering activity. The Enterprise is an ongoing organization or group and exists to advance the interests of the individual entities that comprise its membership, *i.e.*, selling the Affected Vehicles described above. From 2008 through 2015, the Fraudulent "CleanDiesel" Enterprise members all served the common purpose of shipping and selling as many fraudulent "CleanDiesel" vehicles as possible to the United States, therein maximizing their own profits and revenues and sharing the more than $30 billion in illicit gains derived from deceived and defrauded consumers. Each member of the Fraudulent "CleanDiesel" Enterprise benefited from the common purpo se: Volkswagen sold mo re Affected Vehicles, and received more for those vehicles than they otherwi se would have, had the Affected Vehicles been truthfully advertised, marketed and labeled; thus, Bosch was able to sell to Volkswagen more defeat device software to be installed in the Affected Vehicles.

VW FOIA, EPA 06/20/2017 2017-FFP_036331

113. The Fraudulent "CleanDiesel" Enterprise also exists for the legitimate purpose of selling vehicles with software that does not allow those vehicles to evade emissions standards. It operates within a framework that includes the sale of other consumer goods that are not infected with fraud. Each member of the Enterprise performs a role in the group consistent with its structure that furthers the activities of the Fraudulent "CleanDiesel" Enterprise in connection with the Enterprise members' sale of EPA-compliant vehicles to consumers.

114. Alternatively, Bosch and Volkswagen AG are RICO co-conspirators. The Bosch-Volkswagen AG conspiracy undertook a fraudulent scheme to create a defeat device and to install it in Affected Vehicles that were sold in the United States through Volkswagen USA and elsewhere through the use of false and misleading statements and omissions relating to the qualities of the emissions controls installed in those vehicles through the use of the U.S. Mails, and interstate and international wire, radio and television transmissions.

115. At all relevant times and as described above, Defendants carried out their scheme to defraud Plaintiff and other members of the Classes, in connection with the conduct of an alternative "enterprise" within the meaning of 18 U.S.C. § 1961(4).

116. The alternative Enterprise consisted of Volkswagen USA.

117. Through the conduct of the Enterprise or alternative Enterprise, Defendants undertook a fraudulent scheme to sell the Affected Vehicles based upon the false and misleading misrepresentations and omissions set forth herein.

118. Through this scheme, Defendants and others agreed to utilize the false and misleading representations and omissions relating to the Affected Vehicles in a conscious and deliberate effort to sell products at a premium price that, in fact, provided no benefit whatsoever to the purchaser and/or user of the products. Alternatively, the Affected Vehicles sold through

VW FOIA, EPA 06/20/2017 2017-FFP_036332

the Fraudulent "CleanDiesel" Enterprise or Volkswagen USA Enterprise had significantly less value than consumers paid for them because the efficacy claims made were fraudulent and the products did not have the possibility of providing the promised results.

119. As is set forth above, Bosch and Volkswagen knowingly participated in the formulation and manufacture of the def eat device software , as well as the false marketing materials used to sell the Affected Vehicles.

120. At all t imes relevant to this case, Defendants were all willing and deliberate participants in the Enterprise or alternative Enterprise.

121. The Enterprise and alternative Enterprise were, at all relevant times , a continuing unit functioning with a common purpose of selling Affected Vehicles through the use of the false and misleading representations and omissions described above, and those omissions identified below, in order to increase sale of th e Affected Vehicles and thereby i ncrease Defendants' profits.

122. In furtherance of t he scheme, Volkswagen , facilitated by and in concert wit h Bosch, engaged in thousands of acts of mail fraud and wire fraud, each of which c onstitute "racketeering activity," as that term is defined in 18 U.S.C. § 1961(1).

123. Those acts of mail fraud and wire fraud include generally distributing the false and misleading marketing materials described herein via mail, television, radio, and the Int ernet to members of the public as well as communicating among themselves with respect to the scheme via interstate and international email and telephone with the common p urpose of selling the Affected Vehicles to an unsuspecting public based upon the fraudulent and deceptive representations and omissions described above.

VW FOIA, EPA 06/20/2017 2017-FFP_036333

124. In addition to the foregoing, each downlo ad or view of one of Volkswagen's advertisements and videos on the Internet constituted a separate offense of wire fraud.

125. As a result of the foregoing, Plaintiff and the Classes have been injured in their business and/or property in that they paid for Affected Vehicles that did not, and could not, provide the benefits promised in the advertisements and other promotional materials associated with the products. Plaintiff's out-of-pocket losses are a direct result of the predicate acts described above. The Volkswagen Defendants' numerous false and misleading statements (and marketing and advertisements containing omissions) sent via the U.S. mail and interstate w ires were directed to Plaintiff and the members of the proposed Class and Subclasses, and were relied on by Plaintiff and/or the members of the proposed Class and Subclasses. Plaintiff would not have incurred such losses but for the predi cate acts described above. Absent Bosch's facilitation and the Volkswagen Defendants' numerous false and misleading statements (and marketing and advertising containing omissions) sent via the U.S. mail and interstate wires, Plaintiff would not have paid as high a price fo r the Affected Vehicles as it did, or would not have purchased th e Affected Vehicles at all.

COUNT II
Fraud by Concealment

126. Plaintiff realleges and incorporates by reference all preceding paragraphs as though fully set forth herein.

127. Plaintiff brings this claim on behalf of the Nationwide Class.

128. Volkswagen intentionally concealed and suppressed material facts concerning the quality and character of the Affected Vehicles . As alleged in this Complaint, Volkswagen engaged in deception to evade federal and state vehicle emissions standards by installing "defeat

VW FOIA, EPA 06/20/2017 2017-FFP_036334

device" software designed to conceal its vehicles' emissions of the pollutants, which contribute to the creation of ozone and smog.

129. The software installed i n the Affected Vehicles was fraudulently designed to be activated only during emissions testing, such that the vehicles would show far lower emissions during testing than when actually operating on the road. The result, as Defendants intended, was that vehicles passed emissions t esting and received the requisite EPA certifications by way of deliberately-induced false readings. This deliberate, secret deception reportedly resulted in noxious emissions from these vehicles at rates of 40 times permissible levels.

130. Plaintiff and the other members of the Class reasonably relied upon Volkswagen's false representations when decidi ng whether to purchase an Affected Vehicle. They had no way of knowing that Volkswagen's representations were false and gravely misleading. As alleged herein, Volkswagen employed extremely sophisticated methods of deception, such that Plaintiff and the other members of the Class did not, and could not, unravel Volkswagen's deception on their own.

131. Volkswagen concealed and suppressed material facts concerning what is evidently the true culture of Volkswagen – one characterized by an emphasis on profits and sales above compliance with emissions regulations that are meant to protect consumers and the public at large. Defendants also placed more value on profits than they did on maintaining the trust that Plaintiff and the Class had in Volkswagen's representations about the Affected Vehicles and the culture of the company. Such crucial misrepresentations and omissions have left consumers feeling angered and betrayed.

132. Necessarily, Volkswagen also took steps to ensure that its employees did not reveal the details of its deception to regulators or consumers, including Plaintiff and Class

VW FOIA, EPA 06/20/2017 2017-FFP_036335

members. Volkswagen made such a strategic decision in order to boost the reputation s of its vehicles and to falsely assure purchasers and lessors of its vehicles, including certified previously-owned vehicles, that Volkswagen is a reputable manufacturer that complies with applicable law, including federal and state clean air law and emis sions regulations, and that its vehicles likewise comply with applicable law and regulations.

133. Volkswagen's false representations were material to consumers, both because these misrepresentations concerned the quality of the Affected Vehicles, including their compliance with applicable federal and state laws and regulations regarding clean air and emissions, and also because the misrepresentations played a significant role in assessing the value of the Affected Vehicles. As Volkswagen well knew, its customers, including Plaintiff and the Class, highly valued that the vehicles they were purchasing or leasing were clean diesel cars, and they paid accordingly.

134. Volkswagen had a duty to disclose the emissions deception in which it engaged with respect to the Affected Vehicles because: (1) knowledge of the deception and its details were known and accessible only to Volkswagen; (2) Volkswagen had exclusive knowledge as to the implementation and maintenance of its deception; and (3) Volkswagen knew the facts surrounding the deception were unknown to and unable to be rea sonably discovered by Plaintiff and other members of the Class.

135. Volkswagen also had a duty to disclose its sophisticated deception of emissions testing because the company made general affirmative repr esentations about the qualities of its vehicles with respect to emissions standards, starting with references to the Affected Vehicles as "CleanDiesel" cars, or cars with clean diesel engines. Such references were misleading, deceptive, and incomplete without the disclosure of the additional facts set forth herein regarding

VW FOIA, EPA 06/20/2017 2017-FFP_036336

Volkswagen's emissions deception, the actual emissions of its vehicles, its actual philosophy with respect to complying with federal and state clean air law and emissions regulations, a nd its actual practices with respect to the Affected Vehicles.

136. Having volunteered to provide information to Plaintiff and the Class, Volkswagen had a duty to disclose the entire truth. All of the facts omitted and concealed by Volkswagen a re material beca use they directly affect the value of the Affected Vehicles purchased by Plaintiff and other members of the Class. Whether a manufacturer's products comply with federal and state clean air law and emissions regulations, whether that manufacturer is honest about such compliance or non-compliance, and whether the vehicles passed the requisite emissions testing in order to receive EPA certification, are material concerns to a consumer. Volkswagen represented to Plaintiff and other members of the Class that t hey were purchasing clean diesel vehicles, and that emissions testing had confirmed this. Secretly, however, Volkswagen had thoroughly subverted the entire emissions-testing process.

137. Volkswagen actively concealed and/or suppressed these material facts, in whole or in part, to expand and protect its profits, and to avoid the perception that its vehicles did not or could not comply with federal and state laws governing clean air and emissions, which perception would damage the brand's image and cost Volkswagen money. Volkswagen concealed these material facts at the expense of Plaintiff and Class members.

138. On information and belief, Volkswagen has still not made full and adequate disclosures, and continues to defraud Plaintiff and the Class by concealing mater ial information regarding the emissions qualities of its referenced vehicles and the company's systematic emissions deception.

VW FOIA, EPA 06/20/2017 2017-FFP_036337

139. Plaintiff and the other members of the Class were unaware of the omitted material facts referenced herein, and they would not hav e acted as they did if they had known of the concealed and suppressed facts, in that they would not have purchased the Affected Vehicles from Volkswagen or would have taken other affirmative steps in light of the information concealed from them. Plaintiff's and Class members' actions were entirely justified. Volkswagen was in exclusive control of the material facts, and such facts were not known to the public, Plaintiff, or the other members of the Class.

140. As a result of Volkswagen's concealment and suppre ssion of the facts, Plaintiff and the Class have sustained damages. Plaintiff and the Class have been damaged because they own vehicles that are diminished in value as a result of Volkswagen's concealment of the true quality and quantity of those vehicles ' emissions and because Volkswagen failed to timely disclose the actual emissions qualities and quantities of millions of Volkswagen - and Audi - branded vehicles. Had Plaintiff and the Class been aware of the serious issues generated by Volkswagen's deceptive corporate policies, the emissions deceptions with regard to the Affected Vehicles, or the company's callous disregard for compliance with applicable federal and state laws and regulations, Plaintiff and Class members who purchased Affected Vehicles would have paid less for those vehicles or would not have purchased them at all.

141. The value of Plaintiff's and Class members' vehicles has diminished as a result of Volkswagen's fraudulent concealment of its emissions deception, which has greatly tarnished the Volkswagen and Audi brand names attached to Plaintiff' s and Class members' vehicles, and made any reasonable consumer reluctant to purchase any of the Affected Vehicles, let alone pay what otherwise would have been fair market value for those vehicles.

VW FOIA, EPA 06/20/2017 2017-FFP_036338

142. Accordingly, Volkswagen is liable to Plaintiff and the other members of the Class for damages in an amount to be proven at trial.

143. Volkswagen's acts were done wantonly, maliciously, oppressively, deliberately, with intent to defraud, and in reckless disregard of Plaintiff's and Class members' rights and the representations that Volkswagen made to them . These malicious acts were performed solely in order to enrich Volkswagen. Such egregious conduct warrants an assessment of punitive damages in an amount suffic ient to deter such conduct in the future, which amount is to be determined to evidence submitted at trial.

144. Plaintiff pleads this count pursuant to the law of New Jersey, where Volkswagen is incorporated, on behalf of all members of the Class. As necessary , an d in the alternative, Plaintiff may allege sub -classes, based on the residences at pertinent times of members of the Class, to allege fraudulent concealment under the laws of states other than New Jersey.

COUNT III
Breach of Contract

145. Plaintiff realleges and incorporates by reference all preceding paragraphs as though fully set forth herein.

146. Plaintiff brings this claim on behalf of the Nationwide Class.

147. Volkswagen's misrepresentations and omissions alleged herein, including Volkswagen's failure to disclose the existence of the "d efeat device," caused Plaintiff and the other Class members to purchase their Affected Vehicles. Absent those misrepresentations and omissions, Plaintiff and the other members of the Class would not have purchased the Affected Vehicles, would have paid substantially less for the Affected Vehicles, and/or would have purchased less expensive alternative vehicles that did not contain the CleanDiesel engine system

VW FOIA, EPA 06/20/2017 2017-FFP_036339

and the "defeat device." Accordingly, Plaintiff and the Class overpaid for their Affected Vehicles and did not receive the benefit of their bargain.

148. Each and every sale of an Affected Vehicle constitutes a contract between Volkswagen and the purchaser or lessee. Volkswagen breached these contracts by selling Plaintiff and the other members of the Class defective vehicles and by misrepresenting or failing to disclose the existence of the "defeat device," including information known to Volkswagen that rendered each Affected Vehicle less safe and emissions -compliant, and thus less valuable, than vehicles not equipped with CleanDiesel engine systems and "defeat devices."

149. As a direct and proximate result of Volkswagen' s breach of contract, Plaintiff and the Class have been damaged in an amount to be proven at trial, which shall include, but is not limited to, all compensatory damages, incidental and consequential damages, and other damages allowed by law.

COUNT IV
Breach of Express Warranty

150. Plaintiff realleges and incorporates by reference all preceding paragraphs as though fully set forth herein.

151. Plaintiff brings this claim on behalf of the Nationwide Class.

152. Defendants made numerous representations, descriptions, and promises to Plaintiff and Class members regarding the perfor mance and emission controls of their diesel vehicles.

153. Defendants, however, knew or should have known that their representations, descriptions, and promises were false. Defendants were well aware that they had installed defeat devices in the vehicles they sold to Plaintiff and the other members of the Class.

VW FOIA, EPA 06/20/2017 2017-FFP_036340

154. Plaintiff and the Class reasonably relied on Volkswagen's representations in purchasing "clean" diesel vehicles. Those vehicles, however, did not perform as was warra nted. Unbeknownst to Plaintiff, th ose vehicles included devices that caused their emission reduction systems to perform at levels worse than advertised. Those devices are defects. Accordingly, Volkswagen breached its express warranty by providing a product containing defects that were never disclosed to Plaintiff and the Class.

155. As a direct and proximate result of Volkswagen's false and misleading representations and warranties, Plaintiff and the Class suffered significant damages and seek the relief described below.

COUNT V
Breach of Implied Warranty

156. Plaintiff realleges and incorporates by reference all preceding paragraphs as though fully set forth herein.

157. Plaintiff brings this claim on behalf of the Nationwide Class.

158. Volkswagen made numerous representations, descriptions, and promises to Plaintiff and the other members of the Class regarding the functionality of Volkswagen's "clean" diesel technology.

159. Plaintiff and Class members reasonably relied on Volkswagen's representations in purchasing the Affected Vehicles.

160. As set forth throughout this Complaint, Volkswagen knew that its representations, descriptions, and promises regarding its diesel engines were false.

161. When Plaintiff and the other members of the Class purchased Volkswagen's diesel vehicles, those vehicles did not conform to t he promises or affirmations of fact made in Volkswagen's promotional materials, including that the vehicles were designed to meet the most

VW FOIA, EPA 06/20/2017 2017-FFP_036341

demanding environmental standards. Instead, as alleged herein, those vehicles were designed to cheat those standards , and the Affected Vehicles emitted far higher levels of pollution than promised.

162. Accordingly, the Affected Vehicles failed to conform to Volkswagen's implied warranty regarding their functionality.

163. As a direct and proximate result of Volkswagen's false and misleading representations and warranties, Plaintiff and the Class suffered significant injury when Volkswagen sold them cars that, it is now clear, are worth far le ss than the price Plaintiff and the Class paid for them. Accordingly, Plaintiff and the Class seek the relief described below.

COUNT VI
Violation of the Magnuson-Moss Warranty Act
(15 U.S.C. §§ 2301, *et seq.*)

164. Plaintiff realleges and incorporates by reference all preceding paragraphs as though fully set forth herein.

165. Plaintiff brings this claim on behalf of the Nationwide Class.

166. This Court has jurisdiction to decide claims brought under 15 U.S.C. § 2301 by virtue of 28 U.S.C. § 2301(3).

167. Volkswagen's Affected Vehicles are a "consumer product," as that term is defined in 15 U.S.C. § 2301(1).

168. Plaintiff and the other members of the Class are "consumers," as that term is defined in 15 U.S.C. § 2301(3).

169. Volkswagen is a "warrantor" and a "supplier," as those terms are define d in 15 U.S.C. §§ 2301(4) and (5), respectively.

VW FOIA, EPA 06/20/2017 2017-FFP_036342

170. 15 U.S.C. § 2310(d)(1) provides a cause of action for any consumer who is damaged by the failure of a warrantor to comply with an implied warranty.

171. Volkswagen provided Plaintiff and the other members of the Class with "implied warranties," as that term is defined in 15 U.S.C. § 2301(7).

172. Volkswagen has breached these implied warranties as described in more detail above. Without limitation, Volkswagen's Affected Vehicles are defective, as described herein, which resulted in the problems and failures also described herein.

173. By Volkswagen's conduct as described in this Complaint, including Volkswagen's knowledge of the defects inherent in the Affected Vehicles and its action, and inaction, in the face of this know ledge, Volkswagen has failed to comply with its obligations under its written and implied promises, warranties, and representations.

174. In its capacity as a warrantor, and by the conduct described herein, any attempts by Volkswagen to limit the implied warran ties in a manner that would exclude coverage of the defective software and systems is unconscionable and any such effort to disclaim, or otherwise limit, liability for the defective software and supporting systems is null and void.

175. All jurisdictional prerequisites have been satisfied.

176. Plaintiff and members of the Class are in privity with Volkswagen in that they purchased the defeat device software from Volkswagen or its agents.

177. As a result of Volkswagen's breach of implied warranties, Plaintiff and the Nationwide Class members are entitled to revoke their acceptance of the vehicles, obtain damages and equitable relief, and obtain costs pursuant to 15 U.S.C. § 2310.

VW FOIA, EPA 06/20/2017 2017-FFP_036343

COUNT VII
Unjust Enrichment

178. Plaintiff realleges and incorporates by reference all preceding paragraphs as though fully set forth herein.

179. Plaintiff brings this claim on behalf of the Nationwide Class.

180. Plaintiff and members of the Class conferred a benefit on Defendants by, *inter alia*, purchasing their vehicles.

181. Defendants have retained this benefit, and know of and appreciate this benefit.

182. Defendants were and continue to be unjustly enric hed at the expense of Plaintiff and Class members.

183. Defendants should be required to disgorge this unjust enrichment.

B. Claims Brought on Behalf of the Michigan Subclass

COUNT VIII
Violation of the Michigan Consumer Protection Act
(Mich. Comp. Laws §§ 445.901, *et seq*.)

184. Plaintiff realleges and incorporates by reference all preceding paragraphs as though fully set forth herein.

185. Plaintiff brings this claim on behalf of the Nationwide Class or, alternatively, on behalf of the Michigan Subclass.

186. The Michigan Consumer Protection Act ("MCPA") holds unlawful "[u]nfair, unconscionable, or deceptive methods, acts, or practices in the conduct of trade or commerce." Mich. Comp. Laws §§ 445.901, *et seq*.

187. At all times relevant hereto, Defendants were conducting trade or commerce as defined under the MCPA, § 445.902(1)(g).

VW FOIA, EPA 06/20/2017 2017-FFP_036344

188. At all times relevant hereto, Defendants were "persons" engaged in "trade or commerce" within the meaning of the MCPA, § 445.902(1)(d).

189. Plaintiff and the Class members are "persons" under the MCPA, § 445.902(1)(d).

190. A party to a transaction covered under the MCPA must provide the other party the promised benefits of the transaction.

191. Defendants' acts and practices, as discussed throughout this Complaint, were unfair or deceptive acts that are unlawful in violation of the MCPA for, *inter alia*, one or more of the following reasons:

(a) Defendants designed and secretly installed the defeat devices with the intention of deceiving regulators and the public;

(b) Defendants represented that the Affected Vehicles had approval, characteristics, uses, and benefits that they do not have;

(c) Defendants provided and otherwise distributed false and misleading information to c onsumers regarding the legality of the Affected Vehicles, their true emissions characteristics, and their actual performance capabilities;

(d) Defendants represented that the Affected Vehicles were of a particular standard, quality, or grade, when they were of another;

(e) Defendants engaged in unconscionable commercial practices in failing to reveal, and intentionally concealing, material facts and information about the Affected Vehicles, which misled Plaintiff and the Class; and

(f) Defendants failed to reveal, and i ntentionally concealed, facts about the Affected Vehicles that were material to the transaction and upon which they intended Plaintiff and other members of the Class would rely.

VW FOIA, EPA 06/20/2017 2017-FFP_036345

192. Defendants committed these and other unfair and deceptive acts with regard to the marketing and sale and/or lease of the Affected Vehicles.

193. Defendants knew that the Affected Vehicles contained the defeat device designed to deceive regulators and the public.

194. Defendants' concealment and/or failure to warn that the Affected Vehicles contained the defeat device constitutes an unfair, unconscionable, or deceptive act within the meaning of the MCPA.

195. The unfair, unconscionable, and deceptive acts committed by Defendants caused damages to Plaintiff and the other members of the Class. Plaint iff and the Class members have lost money and/or property by purchasing or leasing the Affected Vehicles, which they otherwise would not have purchased or leased, and/or by paying a premium for the Affected Vehicles, which they otherwise would not have pai d. Additionally, the Affected Vehicles have suffered a diminution in value, and any fix would result in increased fuel and efficiency costs, as well as decreased performance, thereby further damaging Plaintiff and the Class.

196. Plaintiff and members of the Class are entitled to compensatory damages, injunctive/equitable relief, and attorneys' fees under the MCPA.

C. Claims Brought on Behalf of the New York Subclass

COUNT IX
Violation of the New York General Business Law
(N.Y. Gen. Bus. Law § 349)

197. Plaintiff realleges and incorporates by reference all preceding paragraphs as though fully set forth herein.

198. Plaintiff brings this claim on behalf of the New York Subclass.

VW FOIA, EPA 06/20/2017 2017-FFP_036346

199. Plaintiff and the New York Subclass are "persons," as defined by the New York General Business Law ("New York GBL"), N.Y. Gen. Bus. Law § 349(h).

200. Defendants are "persons," "firms," "corporations," or "associations," as defined by the New York GBL, N.Y. Gen. Bus. Law § 349.

201. The New York GBL makes unlawful "[d]eceptive acts or practices in the conduct of any business, trade or commerce." N.Y. Gen. Bus. Law § 349. Defendants' conduct directed toward consumers, as described herein, constitutes "deceptive acts or practices" within the meaning of the New York GBL.

202. Defendants' actions as set forth above occurred in the conduct of trade or commerce.

203. In the course of their business, Defendants failed to disclose and actively concealed the dangers and risks posed, to consumers and the public at large, by the Affected Vehicles, and otherwise engaged in activities with a tendency or capacity to deceive.

204. Defendants also engaged in unlawful trade practices by employing deception, deceptive acts or practices, fraud, misrepresentations, or concealment, suppression or omission of any material fact with intent that others rely upon such concealment, suppression or omission, in connection with the sale of the Affected Vehicles.

205. Volkswagen has known about the "defeat device" installed in the Affected Vehicles since at least 2009, when it began marketing and selling vehicles that were intended to fool federal and state emissions testing. Nevertheless, Defendants failed to disclose and actively concealed the dangers and risks posed to consumers and the public by the Affected Vehicles.

206. By failing to disclose and actively concealing the presence of the "defeat device" in the Affected Vehicles, by marketing the Affected Vehicles and environmentally-friendly, and

VW FOIA, EPA 06/20/2017 2017-FFP_036347

fuel-efficient, and by presenting itself as a reputable and trustworthy manufacturer that values its customers and works to promote a healthy environment, Defendants engaged in unfair or deceptive business practices in violation of the New York GBL. Defendants deliberately withheld the information about the "defeat devices" in the Affected Vehicles, as well as the propensity of the Affected Vehicles to expel nearly 40 times the permissible levels of pollutants into the air, instead of protecting consumers and the public from the negative health effects of these noxious fumes, in order to ensure that customers would purchase the Affected Vehicles.

207. In the course of Defendants' business, it willfully failed to disclose and actively concealed the negative effects of the Affected Vehicles both on the environment and on the health of the public. Defendants compounded the deception by repeatedly asserting that the Affected Vehicles were safe, fuel-efficient, and EPA-compliant, and by continuously claiming to be a trustworthy company that values the environment.

208. Defendants' unfair or deceptive acts or practices, including these concealments, omissions, and suppressions of material facts, had a tendency or capacity to mislead, tended to create a false impression in consumers, were likely to and did in fact deceive reasonable consumers, including Plaintiff, about the true safety and legality of the Affective Vehicles and the true value of the Affected Vehicles.

209. Defendants intentionally and knowingly misrepresented material facts regarding the Affected Vehicles and/or the "defeat devices" installed in them with an intent to mislead Plaintiff and the New York Subclass.

210. Defendants knew or should have known that their conduct violated the New York GBL.

VW FOIA, EPA 06/20/2017 2017-FFP_036348

211. As alleged above, Defendants made material misstatements about the EPA compliance and safety of the Affected Vehicles that were either false or misleading.

212. To protect their profits and to avoid remediation costs and a public relations nightmare, Defendant s concealed the health and environmental risks posed by the Affected Vehicles, and allowed unsuspecting new and used car purchasers to continue to buy/lease the Affected Vehicles, and allowed them to continue driving vehicles that are highly toxic to the environment and public health.

213. Defendants owed Plaintiff and the New York Subclass a duty to disclose the true health and environmental effects of the Affected Vehicles because Defendants:

(a) Possessed exclusive knowledge of the risks posed by the foregoing;

(b) Intentionally concealed the foregoing from Plaintiff and the Class; and

(c) Made incomplete representations about the safety and legality of the foregoing generally, while purposefully withholding material facts from Plaintiff and the Class that contradicted these representations.

214. Because Defendants fraudulently concealed the fact that the Affected Vehicles do not comply with federal and state clean air laws and emissions regulations, resulting a raft of negative publicity once the truth began to be disclosed, the value of the Affected Vehicles has greatly diminished. In light of the stigma attached to the Affected Vehicles because of Volkswagen's conduct, they are now worth significantly less than they otherwise would be.

215. Defendants' failure to disclose and active concealment of the health and environmental risks posed by the Affected Vehicles was material to Plaintiff and the New York Subclass. A vehicle made by a reputable manufacturer of EPA-compliant vehicles is worth more

VW FOIA, EPA 06/20/2017 2017-FFP_036349

than an otherwise comparable vehicle made by a disreputable manufacturer of non-EPA-compliant vehicles that creates elaborate schemes to deceive both regulators and consumers.

216. Plaintiff and the New York Subclass suffered ascertainable losses caused by Defendants' misrepresentations and failure to disclose material information. Had they been aware of the "defeat device" that existed in the Affected Vehicles, and Defendants' complete disregard for the safety of its customers or the environment, Plaintiff either would have paid less for his vehicle or would not have purchased or leased it at all. Plaintiff did not receive the benefit of his bargain as a result of Defendants' misconduct.

217. Defendants' violations present a continuing risk to Plaintiff as well as to the general public. Defendants' unlawful acts and practices complained of herein affect the public interest.

218. As a direct and proximate result of Defendants' violations of the New York GBL, Plaintiff and the New York Subclass have suffered injury-in-fact and/or actual damage.

219. Plaintiff and the New York Subclass seek punitive damages against Defendants because Defendants' conduct was egregious. Defendants misrepresented the safety and legality hundreds of thousands of Affected Vehicles, concealed the presence of illegal "defeat devices" in the Affected Vehicles, deceived Plaintiff and the New York Subclass on matters affecting public health, and concealed material facts that only Defendants knew, all to avoid the expense and public relations nightmare of correcting the systems in the Affected Vehicles to ensure that those vehicles complied with federal and state law and regulations. Defendants' egregious conduct warrants punitive damages.

220. Because Defendants' willful and knowing conduct caused injury to the New York Subclass, the New York Subclass seeks recovery of actual damages or $50, whichever is greater,

VW FOIA, EPA 06/20/2017 2017-FFP_036350

discretionary treble damages up to $1,000, punitive damages, reasonable attorneys' fees and costs, an order enjoining Defendants ' deceptive conduct, and any other just and proper r elief available under N.Y. Gen. Bus. Law § 349.

COUNT X
Violation of the New York General Business Law
(N.Y. Gen. Bus. Law § 350)

221. Plaintiff realleges and incorporates by reference all preceding paragraphs as though fully set forth herein.

222. Plaintiff brings this claim on behalf of the New York Subclass.

223. Defendants were and are engaged in the "conduct of business, trade or commerce" within the meaning of N.Y. Gen. Bus. Law § 350.

224. N.Y. Gen. Bus. Law § 350 makes unlawful "[f]alse advertising in the conduct of any business, trade or commerce." False advertising includes "advertising, including labeling, of a commodity … if such advertising is misleading in a material respect," taking into account "the extent to which the advertising fails to reveal facts materia l in light of … representations [made] with respect to the commodity …" N.Y. Gen. Bus. Law § 350-a.

225. Defendants caused to be made or disseminated through New York, through advertising, marketing and other publications, statements that were untrue or mislea ding, and that were known, or by which the exercise of reasonable care should have been known to Defendants, to be untrue and misleading to consumers and the New York Subclass.

226. Defendants have violated New York GBL § 350 because the misrepresentations and omissions regarding the "defeat devices" installed in the Affected Vehicles, and Defendants' failure to disclose and active concealment of the risks to public health and the environment posed

VW FOIA, EPA 06/20/2017 2017-FFP_036351

by the Affected Vehicles, as set forth above, were material and likely to deceive a reasonable consumer.

227. Members of the New York Subclass have suffered an injury, including the loss of money or property, as a result of Defendants' false advertising. In purchasing or leasing Affected Vehicles, Plaintiff and the New York Subclass relied on the misrepresentations and/or omissions of Defendants with respect to the safety and legality of those Affected Vehicles. Defendants' representations were false and/or misleading because the concealed "defeat devices" allowed the Affected Vehicles to emit nearly 40 times more than the permissible level of pollutants into the environment, and seriously undermined the value of the Affected Vehicles. Had Plaintiff and the New York Subclass known this, they would not have purchased or leased their vehicles and/or paid as much for them.

228. Pursuant to N.Y. Gen. Bus. Law § 350-e, the New York Subclass seeks monetary relief against Defendants measured as the greater of (a) actual damages in an amount to be determined at trial and (b) statutory damages in the amount of $500 each for every New York Subclass member. Because Defendants' conduct was committed willfully and knowingly, each New York Subclass member is entitled to recover three times actual damages, up to $10,000.

229. The New York Subclass also seeks an order enjoining Defendants' unfair, unlawful, and/or deceptive practices, attorneys' fees, and any other just and proper relief available under New York GBL § 350.

REQUEST FOR RELIEF

WHEREFORE, Plaintiff, individually and on behalf of members of the Class, respectfully requests that the Court enter judgment in their favor and against Volkswagen, as follows:

VW FOIA, EPA 06/20/2017 2017-FFP_036352

A. Certification of the proposed Class and Subclass, including appointment of Plaintiff's counsel as Class Counsel;

B. An order temporarily and permanently enjoining Volkswagen from continuing the unlawful, deceptive, fraudulent, and unfair business practices alleged in this Complaint;

C. Injunctive relief in the form of a recall or free replacement program;

D. Costs, restitution, damages, and disgorgem ent in an amount to be determined at trial;

E. Revocation of acceptance;

F. Damages under the Magnuson-Moss Warranty Act;

G. Treble and/or punitive damages as permitted by applicable laws;

H. An order requiring Volkswagen to pay both pre - and post-judgment interest on any amounts awarded;

I. An award of costs and attorneys' fees; and

J. Such other or further relief as may be appropriate.

DEMAND FOR JURY TRIAL

Plaintiff demands a jury trial as to all issues so triable.

Respectfully submitted,

Subject: New test Date Request - MY2017 HAAC-BAF, Configuration 0

Hello Jim,

As discussed earlier, we are requesting the test date for the MY2017 Vehicle ID: HAAC-BAF, Configuration: 0 (A4 FWD) be changed to EPA delivery date of January 11th, 2016 , with a test date of January 13th, 2016.

The original test date that was requested and was scheduled in Verify was a test date of December 17, 2015.

If we could get a new Verify message sent to us with the new date confirmed I would appreciate it.

If you have any questions please let me know. Thanks Jim.

Regards,

Greg Allen

ccd0214.pdf

Hello Jim,

After discussing the 2 "eyelet" issue with our factory, they reference a CCD that I haven't seen in a while (CCD-02-14):

Pg 3:

3. All front-wheel-drive vehicles must have two sturdy hold-down eyelets (2.5 inch inside diameter) installed. The eyelets should be located on each side of the vehicle forward of the front wheel centerline and at least 6 inches outboard of the vehicle centerline.

Is this CCD outdated? I briefly looked for an update but was unable to find one. This is why our vehicle is currently being re-worked to add the eyelets.

Regards,

Greg Allen

September 23, 2002 CCD-02-14 (LDV/LDT/MDV/Alt Fuel Convertors)

SUBJECT: Preparing Light-Duty Vehicles and Trucks for Testing at EPA NVFEL

Dear Manufacturer:

Enclosed with this letter are instructions to vehicle manufacturers regarding the preparation of test vehicles prior to delivery to the National Vehicle and Fuel Emissions Laboratory (NVFEL) in Ann Arbor, Michigan for EPA confirmatory testing. These instructions replace EPA's Advisory Circular No. 23B dated June 6, 1990.

Please use these instructions to expedite the testing of your certification and fuel economy data vehicles at NVFEL.

If you have questions about these instructions, please contact Ted Cieslak of the Laboratory Operations Division at (734)214-4500, or your assigned EPA certification representative.

Sincerely,

Gregory A. Green, Director
Certification and Compliance Division
Office of Transportation and Air Quality

PREPARING VEHICLES FOR TESTING AT EPA NVFEL

I. Background - Why Does EPA Test Vehicles?:

A. 40 CFR Part 86.1835-01(a)(1) provides that the Administrator may require submission of test vehicles selected for demonstrating compliance with emission standards to a designated test laboratory. The Agency conducts emission tests at the NVFEL under this provision.

B. 40 CFR Part 86.600.008-77 (d) provides that the Administrator may require fuel economy data vehicles be submitted to a designated test laboratory. The Agency conducts fuel economy tests at the NVFEL under this provision.

II. Applicability:

These instructions are effective immediately and are applicable to all light-duty vehicles, light-duty trucks and medium-duty vehicles being tested for certification and/or fuel economy compliance following the Federal light duty test procedures (FTP).

The instructions are primarily directed at conventionally-fueled vehicles. Please provide written operating instructions and testing procedures for advanced technology vehicles, such as hybrids and fuel cells, to the EPA Certification and Compliance Division representative prior to delivery of the vehicle to NVFEL

III. Preparation of Test Vehicles:

The attachments to this guidance list the preparation requirements for vehicles delivered to the NVFEL in Ann Arbor for testing. The following instructions are designed to facilitate efficient testing of the vehicle.

A. General

1. Two sets of keys, clearly marked with vehicle make, identification number, and model, should be provided with each test vehicle. Please try to limit the size of the key identification tag to no larger than 1 inch by 2 inches.

2. Information pertinent to the testing of the vehicle should be displayed in or on the vehicle in a manner that enables the data to be read from outside the vehicle. Include the following information:

- Manufacturer vehicle identification number
- Location of fuel tank drainage valve
- A fuel tank shutoff valve for gaseous fueled vehicles
- Location of fuel filler door release

VW FOIA, EPA 06/20/2017 2017-FFP_036359

- Canister loading information including load port and vent location

Attachment A-1 is an example format to be used for these data. Attachment A-2 is a completed example of A-1.

Special operating instructions, starting procedures, identification of the dynamometer drive wheels, and traction control operation must be submitted with each vehicle. EPA cannot test a vehicle without this information. Attachment A-2 provides an example for supplying this information.

3. Each vehicle must have the appropriate shift schedule (FTP, HWFET, and US06) entered into the data base for the Video's Drivers Aid (VDA) System. The shift schedule information must be entered in the NVFEL CFEIS database prior to the vehicle arriving at NVFEL. If the vehicle is not in the NVFEL CFEIS database, e.g., after-market alternative fueled vehicles, the shift instructions must be provided in advance to NVFEL.

4. Test vehicles should be delivered to and received by EPA no later than two days prior to the scheduled testing. Also, due to storage limitations, vehicles should arrive no more than four days prior to scheduled testing, unless prior arrangements are made with EPA.

5. The vehicle information in Attachment A-1 should be completed and test number(s) assigned in advance of vehicle inspection.

6. Gaseous-fueled vehicles must be delivered with a sample of the same fuel used to fill the vehicle fuel tank. An example of an acceptable sample container is a stainless steel canister with a "Summa" polished surface and stainless steel valve, part number 87-300 available from Thermo Andersen, 770-319-9999. Another acceptable sample canister is part number 29-10621 available from Entech, 805-527-5939.[1] The fuel supplied by the manufacturer will be used for preconditioning, emission testing, and fuel economy testing.

B. Items Associated with the Evaporative Emission Test

1. A drain line, separate from the main fuel line, must originate from the lowest point in the fuel tank(s) and must incorporate a positive shut-off valve and terminate in an accessible place (e.g., under the rear bumper, in the trunk, or near the fuel filler pipe). The line should end with either a 3/8 inch outside-diameter rigid tube or a quick disconnect similar to an Aeroquip Part No. 5602-8-105.

[1]References to specific manufacturers or suppliers do not constitute EPA promotion or endorsement of the equipment items described in this letter.

VW FOIA, EPA 06/20/2017 2017-FFP_036360

2. Duplicate type J iron-constantan, 0-500°F thermocouples must be installed and be accessible, terminating in a male type J plug (Honeywell No. 30728096-001 or equivalent). The thermocouple should be installed as near as possible to the volumetric center of the fuel when the tank contains 40 percent of its nominal fuel tank capacity.

3. For vehicles which can be tested utilizing fuel tank heat builds, EPA's fuel tank heating system controllers are compatible with heating pads. If the fuel tank surface area is not easily accessible, the manufacturer should install a fuel tank heating source that will allow fuel tank heating. This heating source (preferably a heating blanket) must comply with the provisions of 40 CFR 86.107-78(a)(4). Also, if the heating apparatus supplied with the test vehicle is electric, it should be capable of operating on a 120-volt, 60 Hz alternating current and have a 10 foot power cord, ending in a U.S.A. conventional three-prong plug.

4. The evaporative emission canister must be accessible and the load and vent ports must be labeled. If not, external labeled access lines must be available.

C. Items Associated with the Dynamometer Portion of the Test.

1. The tailpipes of all vehicles must be equipped with a 2.5 inch stainless steel Marmon flange (Aeroquip/Servicemaster Part No. MFF61196-250S, or equivalent). Flanges must be permanently welded to preclude leaks. The face of the flanges must project 3/8 inch beyond the end of the tailpipes as shown in Attachment A-3 to ensure leak-tight connections with the EPA CVS flanges. Any deviation from this configuration which precludes proper mating with the EPA CVS flange will result in rejection of the vehicle.

2. Flanges must extend far enough beyond the body of the vehicles to ensure adequate accessibility. Vehicles with dual exhaust systems should allow a minimum of 3 inches between flanges with faces parallel to one another to facilitate coupling to the EPA CVS flanges.

3. All front-wheel-drive vehicles must have two sturdy hold-down eyelets (2.5 inch inside diameter) installed. The eyelets should be located on each side of the vehicle forward of the front wheel centerline and at least 6 inches outboard of the vehicle centerline.

4. Rear-wheel-drive vehicles that do not have bumpers adequate for restraining require one hold-down eyelet.

Re: Notice of Clean Air Act Violations Pursuant to 42 U.S.C. § 7604(b)(1)(A)

Ladies and Gentlemen,

We represent Rich Hill, Elvis Foster, Robert Nesbitt, Joe Howbert, Callum Dorey, Don Cunningham, Angelyen Wood, Marcia Andru Moshe, Edmund Steppan, Mireya Perez, Kristen Van de Biezenbos, Ann Marie Stief, William Stief, Thomas C. Jorgensen, Kartik Pillutla, Kathryn Sue Vordenberg, Michael Brown, Carol Spindel, Jason Welch, Thomas Bassett, Joshua R. Geller, Michelle Geller, Fred M. Flores, Gary Butterwei, Terri Butterwei, Thomas Michael Carran, Michael Fuerstein, Grant Garcia, Howard Katz, Timothy P. Yerkes, Beth Glassman, Stephanie Waddoups, Mary Jones, Diego Alberto Diaz, Michael Santos, Mark Pomerantz, and Tiffany Ford, individually and on behalf of all others similarly situated (collectively, "Plaintiffs"), and write to provide notice of violations of the Clean Air Act ("CAA") by Volkswagen AG, Audi AG, Porsche AG, Volkswagen Group of America, Inc., and Porsche Cars North America, Inc., (collectively, "VW") to the Administrator of the EPA, to the States in which the violation occurs (in this case, all fifty States and the District of Columbia), and to the alleged violators of the CAA. This is notice is pursuant to 42 U.S.C. § 7604(b)(1)(A), and is made 60 days before Plaintiffs commence a civil action against VW to enforce the applicable emission standards or limitations and to recover civil penalties, costs of litigation (including reasonable attorney and expert witness fees), and all other relief that is proper in citizen suits under the CAA.

The allegations in this notice are based on the Notices of Violation issued by the United States Environmental Protection Agency ("EPA") on September 18, 2015 and November 2, 2015. As stated therein, the EPA has investigated and continues to investigate Volkswagen AG, Audi AG, Porsche AG, Volkswagen Group of America, Inc., and Porsche Cars North America, Inc., (collectively, "VW") for compliance with the CAA, 42 U.S.C. §§ 7401-7671q, and its implementing regulations. The EPA has determined that VW manufactured and installed defeat devices in certain model year 2009 through 2015 diesel light-duty vehicles equipped with 2.0 liter engines, and certain model year 2014 through 2016 diesel light-duty vehicles equipped with 3.0 liter engines. These defeat devices bypass, defeat, or render inoperative elements of the vehicles' emission control system that exist to comply with CAA emission standards. Therefore, VW violated section 203(a)(3)(B) of the CAA, 42 U.S.C. § 7522(a)(3)(B). Additionally, the EPA has determined that, due to the existence of the defeat devices in these vehicles, these vehicles do not conform in all material respects to the vehicle specifications described in the applications for the certificates of conformity that

VW FOIA, EPA 06/20/2017 2017-FFP_036368

purportedly cover them. Therefore, VW also violated section 203(a)(l) of the CAA, 42 U.S.C. § 7522(a)(l), by selling, offering for sale, introducing into commerce, delivering for introduction into commerce, or importing these vehicles, or for causing any of the foregoing acts.

Law Governing Alleged Violations

This notice arises under Part A of Title II of the CAA, 42 U.S.C. §§ 7521-7554, and the regulations promulgated thereunder. In creating the CAA, Congress found, in part, that "the increasing use of motor vehicles . . . has resulted in mounting dangers to the public health and welfare." CAA § 101(a)(2), 42 U.S.C. § 7401(a)(2). Congress' purpose in creating the CAA, in part, was "to protect and enhance the quality of the Nation's air resources so as to promote the public health and welfare and the productive capacity of its population," and "to initiate and accelerate a national research and development program to achieve the prevention and control of air pollution." CAA § 101(b)(l)-(2), 42 U.S.C. § 740 l (b)(l)-(2). The CAA and the regulations promulgated thereunder aim to protect human health and the environment by reducing emissions of nitrogen oxides (NOx) and other pollutants from mobile sources of air pollution. Nitrogen oxides are a family of highly reactive gases that play a major role in the atmospheric reactions with volatile organic compounds (VOCs) that produce ozone (smog) on hot summer days. Breathing ozone can trigger a variety of health problems including chest pain, coughing, throat irritation, and congestion. Breathing ozone can also worsen bronchitis, emphysema, and asthma. Children are at greatest risk of experiencing negative health impacts from exposure to ozone.

The allegations here concern light-duty motor vehicles for which 40 C.F.R. Part 86 sets emission standards and test procedures and section 203 of the CAA, 42 U.S.C. § 7522, sets compliance provisions. Light-duty vehicles must satisfy emission standards for certain air pollutants, including NOx. 40 C.F.R. § 86.1811-04. The EPA administers a certification program to ensure that every vehicle introduced into United States commerce satisfies applicable emission standards. Under this program, the EPA issues certificates of conformity (COCs), and thereby approves the introduction of vehicles into United States commerce.

To obtain a COC, a light-duty vehicle manufacturer must submit a COC application to the EPA for each test group of vehicles that it intends to enter into United States commerce. 40 C.F.R. § 86.1843-01. The COC application must include, among other things, a list of all auxiliary emission control devices (AECDs) installed on the vehicles. 40 C.F.R. § 86.1844-0l(d)(11). An AECD is "any element of design which senses temperature, vehicle speed, engine RPM, transmission gear, manifold vacuum, or any other parameter for the purpose of

VW FOIA, EPA 06/20/2017 2017-FFP_036369

activating, modulating, delaying, or deactivating the operation of any part of the emission control system." 40 C.F.R. § 86.1803-01. The COC application must also include "a justification for each AECD, the parameters they sense and control, a detailed justification of each AECD that results in a reduction in effectiveness of the emission control system, and [a] rationale for why it is not a defeat device." 40 C.F.R. § 86.1844-01(d)(11).

A defeat device is an AECD that reduces the effectiveness of the emission control system under conditions which may reasonably be expected to be encountered in normal vehicle operation and use, unless: (1) such conditions are substantially included in the Federal emission test procedure; (2) the need for the AECD is justified in terms of protecting the vehicle against damage or accident; (3) the AECD does not go beyond the requirements of engine starting; or (4) The AECD applies only for emergency vehicles . . . ." 40 C.F.R. § 86.1803-01.

Motor vehicles equipped with defeat devices, such as those at issue here, cannot be certified. EPA, *Advisory Circular Number 24: Prohibition on use of Emission Control Defeat Device* (Dec. 11, 1972); *see also* 40 C.F.R. §§ 86-1809-01, 86-1809-10, 86-1809-12. Electronic control systems which may receive inputs from multiple sensors and control multiple actuators that affect the emission control systems performance are AECDs. EPA, *Advisory Circular Number 24-2: Prohibition of Emission Control Defeat Devices - Optional Objective Criteria* (Dec. 6, 1978). "Such elements of design could be control system logic (i.e., computer software), and/or calibrations, and/or hardware items." *Id.*

"Vehicles are covered by a certificate of conformity only if they are in all material respects as described in the manufacturer's application for certification . . . ." 40 C.F.R. § 86.1848-10(c)(6). Similarly, a COC issued by EPA, including those issued to VW, state expressly, "[t]his certificate covers only those new motor vehicles or vehicle engines which conform, in all material respects, to the design specifications" described in the application for that COC. *See also* 40 C.F.R. §§ 86.1844-01 (listing required content for COC applications), 86.1848-01(b) (authorizing the EPA to issue COCs on any terms that are necessary or appropriate to assure that new motor vehicles satisfy the requirements of the CAA and its regulations).

The CAA makes it a violation "for any person to manufacture or sell, or offer to sell, or install, any part or component intended for use with, or as part of, any motor vehicle or motor vehicle engine, where a principal effect of the part or component is to bypass, defeat, or render inoperative any device or element of design installed on or in a motor vehicle or motor vehicle engine in compliance with regulations under this subchapter, and where the person knows or should

VW FOIA, EPA 06/20/2017 2017-FFP_036370

know that such part or component is being offered for sale or installed for such use or put to such use."' CAA § 203(a)(3)(B), 42 U.S.C. § 7522(a)(3)(B); 40 C.F.R. § 86. 1854-12(a)(3)(ii). Additionally, manufacturers are prohibited from selling, offering for sale, introducing into commerce, delivering for introduction into commerce, or importing, any new motor vehicle unless that vehicle is covered by an EPA-issued COC. CAA § 203(a)(l), 42 U.S.C. § 7522(a)(l); 40 C.F.R. § 86.1854-1 2(a)(l). It is also a violation to cause any of the foregoing acts. CAA § 203(a), 42 U.S.C. § 7522(a); 40 C.F.R. § 86-1854-12(a).

2.0 Liter Diesel Engines

Each VW vehicle identified by the table below has AECDs that were not described in the application for the COC that purportedly covers the vehicle. Specifically, VW manufactured and installed software in the electronic control module (ECM) of these vehicles that sensed when the vehicle was being tested for compliance with EPA emission standards. The EPA calls this the "switch." The "switch" senses whether the vehicle is being tested or not based on various inputs including the position of the steering wheel, vehicle speed, the duration of the engine's operation, and barometric pressure. These inputs precisely track the parameters of the federal test procedure used for emission testing for EPA certification purposes. During EPA emission testing, the vehicles' ECM ran software which produced compliant emission results under an ECM calibration that VW referred to as the "dyno calibration" (referring to the equipment used in emissions testing, called a dynamometer). At all other times during normal vehicle operation, the "switch", was activated and the vehicle ECM software ran a separate "road calibration" which reduced the effectiveness of the emission control system (specifically the selective catalytic reduction or the lean Ox trap). As a result, emissions of Ox increased by a factor of 10 to 40 times above the EPA compliant levels, depending on the type of drive cycle (e.g., city, highway).

The California Air Resources Board (CARB) and the EPA were alerted to emissions problems with these vehicles in May 2014 when the West Virginia University's (WVU) Center for Alternative Fuels, Engines & Emissions published results of a study commissioned by the International Council on Clean Transportation that found significantly higher in-use emissions from two light duty diesel vehicles (a 2012 Jetta and a 2013 Passat). Over the course of the year following the publication of the WVU study, VW continued to assert to CARB and the EPA that the increased emissions from these vehicles could be attributed to various technical issues and unexpected in-use conditions. VW issued a voluntary recall in December 2014 to address the issue. CARB, in coordination with the EPA, conducted follow up testing of these vehicles both in the laboratory and during normal road operation to confirm the efficacy of the recall. When the

VW FOIA, EPA 06/20/2017 2017-FFP_036371

testing showed only a limited benefit to the recall, CARB broadened the testing to pinpoint the exact technical nature of the vehicles' poor performance, and to investigate why the vehicles' on board diagnostic system was not detecting the increased emissions. None of the potential technical issues suggested by VW explained the higher test results consistently confirmed during CARB's testing. It became clear that CARB and the EPA would not approve certificates of conformity for VW's 2016 model year diesel vehicles until VW could adequately explain the anomalous emissions and ensure the agencies that the 20 16 model year vehicles would not have similar issues. Only then did VW admit it had designed and installed a defeat device in these vehicles in the form of a sophisticated software algorithm that detected when a vehicle was undergoing emissions testing.

VW knew or should have known that its "road calibration" and "switch" together bypass, defeat, or render inoperative elements of the vehicle design related to compliance with the CAA emission standards. This is apparent given the design of these defeat devices. As described above, the software was designed to track the parameters of the federal test procedure and cause emission control systems to underperform when the software determined that the vehicle was not undergoing the federal test procedure.

VW's "road calibration" and "switch" are AECDs that were neither described nor justified in the applicable COC applications, and are illegal defeat devices. Therefore each vehicle identified by the table below does not conform in a material respect to the vehicle specifications described in the COC application. As such, VW violated section 203(a)(l) of the CAA, 42 U.S.C. § 7522(a)(l), each time it sold, offered for sale, introduced into commerce, de livered for introduction into commerce, or imported (or caused any of the foregoing with respect to) one of the hundreds of thousands of new motor vehicles within these test groups. Additionally, VW violated section 203(a)(3)(B) of the CAA, 42 U.S.C. § 7522(a)(3)(B), each time it manufactured and installed into these vehicles an ECM equipped with the "switch" and " road calibration."

The vehicles are identified by the table below. All vehicles are equipped with 2.0 liter diesel engines.

Model Year	EPA Test Group	Make and Model(s)
2009	9VWXV02.035N	VW Jetta, VW Jetta Sportwagen
2009	9VWXV02.0U5N	VW Jetta, VW Jetta Sportwagen
2010	AVWXV02.0U5N	VW Golf, VW Jetta, VW Jetta Sportwagen,

VW FOIA, EPA 06/20/2017 2017-FFP_036372

		Audi A3
2011	BVWXV02.0U5N	VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2012	CVWXV02.0U5N	VW Beetle, VW Beetle Convertible, VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2012	CVWXV02.0U4S	VW Passat
2013	DVWXV02.0U5N	VW Beetle, VW Beetle Convertible, VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2013	DVWXV02.0U4S	VW Passat
2014	EVWXV02.0U5N	VW Beetle, VW Beetle Convertible, VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2014	EVWXV02.0U4S	VW Passat
2015	FVGA V02.0VAL	VW Beetle, VW Beetle Convertible, VW Golf, VW Golf Sportwagen, VW Jetta, VW Passat, Audi A3

3.0 Liter Diesel Engines

Each VW vehicle identified by the table below has AECDs that were not described in the application for the COC that purportedly covers the vehicle. Specifically, VW manufactured and installed software in the electronic control module (ECM) of each vehicle that causes the vehicle to perform differently when the vehicle is being tested for compliance with EPA emission standards than in normal operation and use.

When this software determines the vehicle has begun the FTP 75 Federal emission test procedure, it directs the vehicle to employ a low NOx temperature conditioning mode. A status bit in the software indicates that a "temperature conditioning" mode is active. In this low NOx temperature conditioning mode, the vehicle operates under a number of emission control parameters, including injection timing, exhaust gas recirculation rate, and common rail fuel pressure in such a way that the parameters yield low engine-out NOx emissions and high exhaust temperatures. The high exhaust temperatures heat the selective catalytic reduction system ("catalyst") and improve the catalyst's ability to reduce tailpipe NOx emissions. In this low NOx temperature conditioning mode, the combination of low engine-out NOx and improved catalyst performance results in tailpipe NOx emissions that are below the applicable emissions standard.

VW FOIA, EPA 06/20/2017 2017-FFP_036373

However, the software employs a "timer" that coincides with the low NOx temperature conditioning mode. At exactly one second after the completion of the initial phases of the FTP 75 Federal emissions test procedure (1,370 seconds, which is when the vehicle would normally be turned off), this software directs the vehicle to cease low NOx temperature conditioning mode. The "temperature conditioning" status bit switches to zero, and a second status bit indicates the activation of "transition to normal mode." In this "normal mode," the emission control system is immediately less effective. Compared to the low NOx temperature conditioning mode, the vehicle employs a different injection timing, exhaust gas recirculation rate, and common rail fuel pressure. This yields higher levels of NOx from the engine and reduced exhaust temperatures.

In addition, when the vehicle starts under conditions that the software determines *are not* the beginning of the FTP 75 Federal emission test procedure, the vehicle does not use the low NOx temperature conditioning mode at all. Instead, the emission control parameters are set consistent with the "normal mode." In sum, as soon as the vehicle senses that it is not being tested, it uses "normal mode." In "normal mode," tailpipe emissions of NOx are up to 9 times the applicable NOx standard levels, depending on model type and type of drive cycle (e.g., city, highway).

This notice is based on vehicle emission testing performed by the EPA's National Vehicle and Fuel Emissions Laboratory, California Air Resources Board's Hagen-Smit Laboratory, and Environment Canada's River Road Laboratory. This testing was performed since EPA's announcement on September 25, 2015, that it would perform additional testing "using driving cycles and conditions that may reasonably be expected to be encountered in normal operation and use, for the purposes of investigating a potential defeat device." EPA, *EPA Conducted Confirmatory Testing* (Sept. 25, 2015).

VW knew or should have known that the software described above bypasses, defeats, or renders inoperative elements of the vehicle design related to compliance with the CAA emission standards. This is apparent given the design of these defeat devices. As described above, the software was designed to track federal test procedures and cause emission control systems to underperform when the software determined that the vehicle was not being tested.

VW's software described above includes one or more AECDs that were neither described nor justified in the applicable COC applications, and are illegal defeat devices. Therefore each vehicle identified by the table below does not conform in a material respect to the vehicle specifications described in the COC application. As such, VW violated section 203(a)(1) of the CAA, 42 U.S.C. § 7522(a)(1), each

VW FOIA, EPA 06/20/2017 2017-FFP_036374

time it sold, offered for sale, introduced into commerce, delivered for introduction into commerce, or imported (or caused any of the foregoing with respect to) one of the new motor vehicles within these test groups. Additionally, VW violated section 203(a)(3)(B) of the CAA, 42 U.S.C. § 7522(a)(3)(B), each time it manufactured and installed into these vehicles an ECM equipped with the software described above. The vehicles are identified by the table below. All vehicles are equipped with 3.0 liter diesel engines.

Model Year	EPA Test Group	Make and Model(s)
2014	EADXT03.02UG	VW Touareg
2015	FPRXT03.0CDD	Porsche Cayenne
2016	GVGAJ03.0NU4	Audi A6 Quattro, A 7 Quattro, A8, A8L, and Q5

Citizen Enforcement

The investigation into this matter is continuing. The above tables represent specific violations that the EPA and Plaintiffs believe, at this point, are sufficiently supported by evidence to warrant the allegations in this notice. The EPA and Plaintiffs may find additional violations as the investigation continues, including violations related to carbon dioxide emissions from diesel and gasoline-power VW vehicles, as indicated by VW's public announcement on November 3, 2015.

Not less than 60 days following this notice, Plaintiffs may commence a civil action pursuant to 42 U.S.C. §7604, which provides that the district courts of the United States have jurisdiction to enforce emission standards or limitations, to apply any appropriate civil penalties, and to award costs of litigation (including reasonable attorney and expert witness fees) to any party.

Sincerely,

Robert S. Safi

The GHG did finally show up in Verify. Not looking too good. I talked with Rob French and the requirements say VW should have a plan for recovering from debits after 3 years (sorry quickly paraphrasing here) . In other words we need to talk about 2020 and any additional credits anticipated. Perhaps at the Pre-Cert mtg.

I also have questions regarding the Pre-cert but they can wait for the actual mtg.

Meanwhile I think I have all the req'd documentation to approve a 2017 cert.

IUVP Waiver Requests: Objectives, Considerations, and Information Needs (rev 5)

Section 86.1845-04 (b) (3) says that approval for IUVP waivers:

"... will be based on a review of the procurement efforts made by the manufacturer to determine if all reasonable steps have been taken to procure the required test group size."

EPA policy includes the following guidelines for IUVP waiver decisions. EPA's objectives include:

1. Staying within our regulatory authority.
2. Equitably grant and deny waivers among the manufacturers.
3. Maximize IUVP test rates.

These three objectives require flexibility due to the many factors that deserve being considered for deciding on waiver requests.

The purpose of this document is to inform IUVP waiver requestors of the information EPA needs to make a decision

- EPA is becoming aware that there is a significant disparity in incentives. Some manufacturers are offering incentives in excess of $1,000 while others offer incentives as low as $150.

  While there are legitimate reasons for varying levels of incentives, there appears to be an increasing disparity among manufacturers as to the level of incentives and efforts made to procure some vehicles that are difficult to obtain. Some manufacturers are taking extreme measures to procure vehicles while others appear to make a minimal effort and quickly request a waiver. This is unfair to those manufacturers that are making real efforts to procure vehicles and it limits the number of vehicles tested and the valuable data provided to the IUVP program.

  Please provide EPA with the incentives offered.

- High sales test groups are generally expected to be easier to recruit than low sales test groups.

  Please provide the sales statistics.

- The emissions levels of vehicles in the test group are considered in whether a waiver is appropriate or not.

  Please provide the emissions results with the standards.

Also, when there are difficulties recruiting vehicles, EPA sometimes will grant prior approval for the following:

- Recruiting vehicles outside the mileage window.

- Recruiting from a rental agency such as Hertz, Avis, etc.

- As a last resort, randomly selecting among company-owned vehicles.

Because we are receiving several IUVP waiver requests per week, EPA can provide faster and more equitable decisions if waiver requestors concisely present relevant information.

The list below includes the type of information needed, though the type of waiver request may not justify all of the information listed below, and other requests may be enhanced by including information that is not listed. Also, precise numbers often are not necessary if the precise number is more difficult to attain (i.e. less than 8,000 sales instead of 6,342 sales). Please keep in mind that pertinent information will lead to faster waiver decisions.

- Total U.S. sales, including sales by vehicle model.
- Sales within a 100 mile radius of the emissions laboratory and the radius actually used.
- The remaining number needed to complete the requirement.
- Emissions results and standards for already tested vehicles in the test group.
- Mailing Campaigns:
  - Number of mailing campaigns.
  - Number of months, after the end of production, that each mailing campaign began.
  - Number of letters mailed in each campaign.
  - Incentives offered in each of the mailings.

- Pertinent statistics on the results of each of the mailing campaign, such as:
  - Number of owners willing to participate.
  - Number of owners not willing to participate.

    - Reasons for not participating.
    - Number of vehicles rejected.
    - Reason for each rejection.
- Were the loaner vehicles desirable substitutes for target vehicle, for example, but not limited to:
    - Vehicle types: such as were vans made available to van owners?
    - Were the MSRPs at least as high and as well appointed as the target vehicle.
- Procurement area (high altitude, California, 49 State, 50 State)
- Mileage Type (low, high, 75% of full useful life)

Clearly stating the type of waiver being requested also helps. Examples include:

- Waiver from any additional testing.
- Move the vehicle recruiting from high altitude to low altitude.
- Move the vehicle recruiting from Federal to California.
- Mileage waiver, etc.

Providing such information, that is pertinent to your waiver request, will facilitate fast decisions.

Hi Bill,

Sorry for all the confusion. I used the guidelines you sent to create a waver but obviously we will have to do better on the information we put into our waver.

We will create a draft for a standard waver form with the required information and send it to you for approval. This is just a general waver form to make sure we list all the information you'll need.

When EPA is happy with the kind of information we list in our waver form we will create specific wavers for the test groups we couldn't find the cars we were supposed to find.

Please let me know if that is acceptable.

Best regards

Subject: RE: IUVP Waver CY 2015 - TG AVWXV02.5257

Hi Tobias,

"How many Test Group XYZ vehicles are registered within a hundred mile radius of your test lab?" is a standard question John O'Cain and I ask. In my experience, VW is the only manufacturer that has not been able to answer the question. Sending letters within 25 miles of the lab is far below the norm for VW's competitors, but this varies with circumstances. Low budget vehicles with 105,000 miles on them may be easily procured by letters within 25 miles of the lab, but waivers are not requested for such vehicles. The radius should increase as the difficulty increases. If a test group only has five registered vehicles within a 100 mile radius of the lab, and the incentive was generous, and loaner vehicles were at least as well appointed as the owner's vehicles, and all five refused to participate, it could be very easy for EPA to grant a waiver quickly.

On the other hand, exchanging piece-meal emails to get the information necessary to maintain a level playing field among the manufacturers, really slows things down. It is much more complicated to piece together multiple emails to construct a conclusion. When manufacturers construct a logical summary of relevant information supporting that a waiver is justified, EPA can very quickly respond quickly.

Information that may help includes providing the vehicle models in each test group to help determine whether the incentive is appropriate. Owners of economy cars are often willing to accept considerably lower incentives than owners of high priced luxury vehicles, and similar logic applies to the loaner vehicles being offered. If you send the retail prices along with the models, it saves us from looking it up, so we can respond even faster. But we can find the prices. We don't have the resources to determine the number of vehicles within a 100 mile radius of the test lab, and some of the other relevant statistics.

I'm not sure what else we can do to help you build a case to earn a waiver. I have sent you the attached document in the past (2x if I remember correctly), and I've contacted you in the past about the difficulty in making a waiver decision without the information needed.

On 11/17/2015, EPA granted a waiver for TG AVWXV02.5257 to move procurement and testing to low altitude, to relieve the high altitude procurement burden. But I don't have enough information to either deny or grant waivers for the other five vehicles/test groups listed in the table below, from your 11/17/2015 email waiver request.

Test Group	Stat$	# of Return Cards	# of First Mailing	# of Second Mailing	# of Third Mailing	# of Fourth Mailing	Required	Highest Mileage return cards	
AVWXT[illegible]64		10	29	N/A	N/A	90K	83,274 & 79,000	Letters sent within 25mi	
AVWXW[illegible]14		10	39	N/A	N/A	90K	70,933 & 68,000	Letters sent within 25mi	
AVWXV[illegible]13		10	10	25	50	105K	90,000 & 82,254	Letters sent within 25mi	
AADXV[illegible]20		20	20	71		105K	101240 &	Letters sent within 25mi	

						69,006	
AVWXV02.5256	10	20			90K	81,054 & 75,356	Letters sent within 25mi
AVWXV02.5256A5	10	20			105K	89029 & 49,199	Letters sent within 25mi
AVWXV02.5257	15	15	N/A	N/A	50K	44,000 & 0	Letters sent within 25mi

Please call me if you think that will help. The "Alliance of Automobile Manufacturers" may be a good contact for determining "How many Test Group XYZ vehicles are registered within a hundred mile radius of your test lab."

Thanks,

Bill

Hi Bill,

Here is a table that shows you our procurement data.

We don't have a number how many cars are registered in a 100 mile radius and I don't think we have a way to get that number.

For the last test group there are 23 cars in all of Colorado, so we sent a few customers two letters.

Test Group	State	# of Return Cards	# of First Mailing	# of Second Mailing	# of Third Mailing	# of Fourth Mailing	Required	Highest Mileage return cards	
AVWXT	[illegible]	64	10	29	N/A	N/A	90K	83,274 & 79,000	Letters sent within 25mi
AVWXV	[illegible]	14	10	39	N/A	N/A	90K	70,933 & 68,000	Letters sent within 25mi
AVWXV	[illegible]	13	10	10	25	50	105K	90,000 & 82,254	Letters sent within 25mi
AADXV	[illegible]	20	20	20	71		105K	101240 & 69,006	Letters sent within 25mi
AVWXW	[illegible]	56	10	20			90K	81,054 & 75,356	Letters sent within 25mi
AVWXV	[illegible]	A5	10	20			105K	89029 & 49,199	Letters sent within 25mi
AVWXV	[illegible]	72	15	15	N/A	N/A	50K	44,000 & 0	Letters sent within 25mi

Let me know if you need anything else.

Best regards

Hi Tobias,

I have similar questions to the question in my earlier email today:

1. What was the distance radius from your test lab for the mailings?

2. How many vehicles with this test group is registered within a 100 mile radius or altitude above 4,000 feet?

3. For the vehicles with return cards, please report the mileage of the highest two vehicles.

Thanks,

Bill

Hi Bill, hi Jim,

Overall we got pretty good responses for our CY 2015 IUVP program, but it is always difficult to find cars over 90 K miles.

So here are 6 wavers in one document where we request to test cars with lower mileage.

We got responses for all test groups and have cars lined up for testing but they are under the 75% of full Useful life.

Maybe you can give me a heads up so we can proceed with our testing.

Thanks for your help and have a good weekend.

Murkowski: Senate to move on own energy bill, but sees compromise with House

By Kevin Rogers

The Senate doesn't plan to act on a freshly passed House energy reform bill and will instead focus on its own bill, Energy and Natural Resources Committee Chairman Sen. Lisa Murkowski said Thursday, but she expressed hope that the chambers could hash out a compromise bill in conference.

The Alaska Republican's remarks came shortly before the House approved the North

American Energy Security and Infrastructure Act of 2015. The bill passed on a mainly party-line vote of 249-174, well short of the 290 votes needed to override the veto threatened by the White House.

"I like the Senate bill. I think the House has been working hard, and we appreciate that, but absolutely there's room to meld the two together when we get to that point in time," Murkowski said at an event hosted by The Hill. "I'm just pleased we're kind of tracking one another as two bodies moving forward, on perhaps a little different take on the issues, but we're teeing things up so that the time comes we can move them all together."

The Senate bill, a compromise she struck with ranking member Sen. Maria Cantwell, D-Wash., advanced out of committee in July on an 18-4 vote. Murkowski said she hoped to get the legislation to the Senate floor early next year.

"We're ready to go, and it's got strong bipartisan support," Murkowski said. "I think that's what we're looking for to lead on some of these issues where you have that support, where you've demonstrated the ability to figure out where that common ground is."

The House measure was originally billed as a bipartisan effort to update the nation's energy policies, but most Democrats abandoned it after accusing Republicans of adding a number of policies too favorable to fossil fuels. Democrats also criticized its lack of provisions supporting renewable energy and combating climate change.

"H.R. 8 has one central theme binding its titles — an unerring devotion to the energy of the past," Energy and Commerce ranking member Rep. Frank Pallone, D-N.J., said of the bill during debate. "It's the Republican Party's 19th-century vision for the future of U.S. energy policy in the 21st century."

But Chairman Rep. Fred Upton, R-Mich., chief author of the bill, said it was an necessary update to reflect the growth in U.S. oil and natural gas production.

"Today the House put the scarcity mindset in the rear-view mirror and said yes to energy and yes to jobs," he said in a statement following the vote.

The House bill focused on streamlining permitting and siting for natural gas pipelines, expediting liquefied natural gas exports, boosting grid cybersecurity, and scaling back some Energy Department efficiency programs.

It also picked up amendments to lift the Commerce Department ban on crude oil exports, and to speed up the permit review process for pipelines and transmission projects that cross national borders.

The Senate bill also seeks to expedite LNG exports and enhance grid cybersecurity, but it goes further in promoting renewable energy and energy efficiency, updates the Strategic Petroleum Reserve, and reauthorizes — while reforming — the Land and Water Conservation Fund, while leaving more divisive issues off the table.

Murkowski and Cantwell, shepherding the bill through committee over the summer, successfully blocked "poison pill" amendments they said would have threatened its bipartisan support. They said they would strive to keep the bill bipartisan on the floor by discouraging other messaging amendments.

Murkowski said striking that balance meant taking some of her own energy priorities off the table.

"This bill is not Lisa Murkowski's perfect bill," she said. "But I knew that there were certain things that were not going to pass muster in that open process. So we sat back and said we're going to do that at another time and another place, which we will."

To accommodate Republican priorities, Murkowski developed a separate bill to lift the ban on crude exports, reform revenue sharing for energy production, and expand offshore drilling, while Cantwell and other Democrats have introduced a bill focused on combating climate change and supporting renewable energy development.

If a bill succeeds in winning approval in both houses, it would be the first major overhaul of the nation's energy policy since 2007.

Ex-coal CEO Blankenship convicted of misdemeanor conspiracy, plans to appeal

By Jonathan Matisse and John Raby

CHARLESTON, W.Va. (AP) — Former Massey Energy CEO Don Blankenship was convicted Thursday of a misdemeanor count connected to a deadly coal mine explosion and acquitted of more serious charges.

A federal jury in West Virginia convicted Blankenship of conspiring to willfully violate mine safety standards. The misdemeanor charge carries up to one year in prison. Jurors did not find Blankenship guilty of a more serious conspiracy charge included in the same count that could have netted five years in prison. He was also acquitted of making false statements and securities fraud.

U.S. Secretary of Labor Thomas Perez said Blankenship's conviction sends a message that "no mine operator is above the law."

Perez made the statement in a news release Thursday after the verdict was announced in Blankenship's criminal trial in Charleston. Perez said there "must be accountability when people lose their lives because of the neglect of their employer."

House overwhelmingly backs 5-year transportation bill

By Joan Lowy

WASHINGTON (AP) — The House on Thursday overwhelmingly approved a 5-year, $305 billion bill that boosts highway and transit spending and assures states that federal help will be available for major projects. Senate approval was expected to follow later in the day.

The bill, approved by a 359-65 vote, doesn't include as much money or last quite as long as many lawmakers and the Obama administration would have liked. Nor does it resolve how to pay for transportation programs in the long term.

Despite that, the 1,300-page bill was hailed by industry and public officials as a major accomplishment that will halt the cycle of last-minute, short-term fixes that have kept the federal Highway Trust Fund teetering on the edge of insolvency for much of the past eight years.

Republicans leaders can point to the bill's passage as evidence of their ability to govern, and President Barack Obama can claim to have made progress on addressing the nation's aging and congested infrastructure, a major goal since the early days of his administration. Lawmakers in both parties effusively praised the bill as a model of bipartisan cooperation that didn't give everyone everything they wanted, but overall is an important step forward.

Groups appeal suspension of federal oil, gas drilling rules

By Mead Gruver

CHEYENNE, Wyo. (AP) — Environmental groups have appealed a judge's decision to suspend new rules for oil and gas drilling on federal land across the U.S. pending the outcome of a legal challenge to those rules.

The rules should be allowed to take effect to protect land, water and wildlife from practices including hydraulic fracturing, the Sierra Club and others argue in court documents.

On Sept. 30, U.S. District Judge Scott Skavdahl in Wyoming disagreed and blocked the rules from taking effect while the lawsuit contesting them moves ahead.

The environmental groups, which have sided with the federal government in the case, appealed Skavdahl's decision Nov. 27 to the 10th U.S. Circuit Court of Appeals. The case itself remains before Skavdahl in Casper.

Black lung data elusive as new coal dust rules take effect

By Dylan Lovan

LOUISVILLE, Ky. (AP) — Alarmed that black lung disease routinely goes unreported decades after it was discovered among miners, federal mine safety officials are touting new regulations that will step up monitoring for the coal dust that causes the deadly disease.

Beginning Feb. 1, the Mine Safety and Health Administration will require coal operators to increase the number of air samples taken in underground mines. The agency also will require miners working in the dustiest underground conditions to wear personal devices that give real time readings on air quality.

The government's top mine safety official, Joe Main, said pneumoconiosis, which kills about 1,000 coal miners a year, is likely afflicting far more miners than the data collected by his agency shows. From October 2010 through the end of September, mine operators reported 701 cases of black lung, but in a four-year span from 2010 to 2014, 3,675 miners were awarded black lung benefits, according to MSHA.

"It drives home the point we really need to do more to end this disease," Main, an assistant Labor secretary who runs MSHA, told The Associated Press.

NRG Energy CEO Crane resigns, company names COO new leader

By The Associated Press

NRG Energy shares rose Thursday after the power company announced the resignation of long-time CEO David Crane and named a replacement.

The company said Crane stepped down immediately, and he will be replaced by Executive Vice President and Chief Operating Officer Mauricio Gutierrez. Crane had served as CEO since 2003, a year before Gutierrez joined the Princeton, New Jersey-based company.

The company offered no reason in a brief statement announcing Crane's resignation.

Shares of NRG Energy fell to a 10-year low after the company said Tuesday that it agreed to sell power plants in Pennsylvania and New Jersey. Crane said then in a statement from the company that it was creating value for shareholders by streamlining its fleet of generating stations. He said the moves were part of an "ongoing and deliberate strategy of portfolio optimization."

VW lawyer: Consolidate lawsuits against carmaker in Michigan

By Cain Burdeau

NEW ORLEANS (AP) — A Volkswagen lawyer on Thursday said the company would like hundreds of federal civil lawsuits filed against the carmaker over its emissions cheating scandal to be consolidated in Michigan.

Volkswagen's attorneys were among hundreds of lawyers at a hearing in federal court in New Orleans to look at consolidating more than 460 lawsuits against the German carmaker.

The five judges of the Judicial Panel on Multidistrict Litigation heard from the string of lawyers making their cases for consolidation in the federal districts of their liking. The panel — which happened to be meeting in New Orleans — did not rule Thursday on where the lawsuits should be consolidated.

Volkswagen lawyer Jeffrey L. Chase asked the panel to choose Michigan, where VW is working with the U.S. Environmental Protection Agency's branch there on its investigation into the emissions cheating scandal.

US-led coalition target IS oil facilities in eastern Syria

Trouble seeing this email? Click here.

By Danica Kirka and Jim Heintz

LONDON (AP) — As British jets opened airstrikes against the Islamic State group in Syria and Germany prepared to send troops and aircraft to the region, Russia's president called on the world Thursday to brandish "one powerful fist" in the fight against terrorism.

Yet even as international efforts to defeat the extremists grew, animosity between Russia and Turkey only intensified.

Hours after Britain's Parliament authorized military action in Syria, its Tornado warplanes struck oil fields in eastern Syria that help finance IS. "This strikes a very real blow at the oil and the revenue on which the Daesh terrorists depend," Defense Secretary Michael Fallon told the BBC, using the Arabic acronym for IS.

Both the U.S.-led coalition and Russian warplanes have struck the extremists' oil facilities and Russia has drawn heated international attention to the issue by accusing Turkish authorities of profiting from oil trade with IS — allegations Turkish President Recep Tayyip Erdogan has strongly denied.

France's Total renews Cyprus offshore gas search deal

NICOSIA, Cyprus (AP) — Cyprus says French energy company Total has renewed its license to search for oil and gas in waters off the eastern Mediterranean island nation's southern coast for another two years.

Deputy government spokesman Victoras Papadopoulos says the government approved the renewal agreement on Thursday.

Papadopoulos said under the terms of the deal, Total's search area — or block — will be smaller. He didn't specify how much area Total cedes back to the government.

Total went ahead with the deal despite disappointing results from an initial round of exploratory drilling.

Turkey may speed up building pipeline for Azerbaijani gas

Trouble seeing this email? Click here.

By The Associated Press

BAKU, Azerbaijan (AP) — Turkey and Azerbaijan say they may speed up building a new natural gas pipeline, a statement that comes amid Turkey's bitter rift with Russia.

Turkish Prime Minister Ahmet Davutoglu said Thursday after talks in Baku with Azerbaijan's President Ilham Aliyev that the TANAP gas project could be completed before its original target, 2018. Aliyev said it would also serve to export Azerbaijan's gas further on to Europe.

The announcement came hours after Russia said it halted talks on building a prospective pipeline to Turkey amid tensions over the downing of a Russian warplane.

The TANAP pipeline is intended to carry oil from Azerbaijan's Caspian Sea fields to Turkey. It is expected to have a capacity of 16 billion cubic meters of gas a year and cost about $10 billion.

Riders biggest obstacle to spending bill: Mikulski

Negotiations over the omnibus spending bill necessary to avoid a government shutdown will have to navigate a forest of riders that Sen. Barbara Mikulski, D-Md., sees as the "biggest challenge," E&E reports.

Murkowski: Senate to move on own energy bill, but sees compromise with House

By Kevin Rogers

The Senate doesn't plan to act on a freshly passed House energy reform bill and will instead focus on its own bill, Energy and Natural Resources Committee Chairman Sen. Lisa Murkowski said Thursday, but she expressed hope that the chambers could hash out a compromise bill in conference.

The Alaska Republican's remarks came shortly before the House approved the North

American Energy Security and Infrastructure Act of 2015. The bill passed on a mainly party-line vote of 249-174, well short of the 290 votes needed to override the veto threatened by the White House.

"I like the Senate bill. I think the House has been working hard, and we appreciate that, but absolutely there's room to meld the two together when we get to that point in time," Murkowski said at an event hosted by The Hill. "I'm just pleased we're kind of tracking one another as two bodies moving forward, on perhaps a little different take on the issues, but we're teeing things up so that the time comes we can move them all together."

The Senate bill, a compromise she struck with ranking member Sen. Maria Cantwell, D-Wash., advanced out of committee in July on an 18-4 vote. Murkowski said she hoped to get the legislation to the Senate floor early next year.

"We're ready to go, and it's got strong bipartisan support," Murkowski said. "I think that's what we're looking for to lead on some of these issues where you have that support, where you've demonstrated the ability to figure out where that common ground is."

The House measure was originally billed as a bipartisan effort to update the nation's energy policies, but most Democrats abandoned it after accusing Republicans of adding a number of policies too favorable to fossil fuels. Democrats also criticized its lack of provisions supporting renewable energy and combating climate change.

"H.R. 8 has one central theme binding its titles — an unerring devotion to the energy of the past," Energy and Commerce ranking member Rep. Frank Pallone, D-N.J., said of the bill during debate. "It's the Republican Party's 19th-century vision for the future of U.S. energy policy in the 21st century."

But Chairman Rep. Fred Upton, R-Mich., chief author of the bill, said it was an necessary update to reflect the growth in U.S. oil and natural gas production.

"Today the House put the scarcity mindset in the rear-view mirror and said yes to energy and yes to jobs," he said in a statement following the vote.

The House bill focused on streamlining permitting and siting for natural gas pipelines, expediting liquefied natural gas exports, boosting grid cybersecurity, and scaling back some Energy Department efficiency programs.

It also picked up amendments to lift the Commerce Department ban on crude oil exports, and to speed up the permit review process for pipelines and transmission projects that cross national borders.

The Senate bill also seeks to expedite LNG exports and enhance grid cybersecurity, but it goes further in promoting renewable energy and energy efficiency, updates the Strategic Petroleum Reserve, and reauthorizes — while reforming — the Land and Water Conservation Fund, while leaving more divisive issues off the table.

Murkowski and Cantwell, shepherding the bill through committee over the summer, successfully blocked "poison pill" amendments they said would have threatened its bipartisan support. They said they would strive to keep the bill bipartisan on the floor by discouraging other messaging amendments.

Murkowski said striking that balance meant taking some of her own energy priorities off the table.

"This bill is not Lisa Murkowski's perfect bill," she said. "But I knew that there were certain things that were not going to pass muster in that open process. So we sat back and said we're going to do that at another time and another place, which we will."

To accommodate Republican priorities, Murkowski developed a separate bill to lift the ban on crude exports, reform revenue sharing for energy production, and expand offshore drilling, while Cantwell and other Democrats have introduced a bill focused on combating climate change and supporting renewable energy development.

If a bill succeeds in winning approval in both houses, it would be the first major overhaul of the nation's energy policy since 2007.

Ex-coal CEO Blankenship convicted of misdemeanor conspiracy, plans to appeal

By Jonathan Matisse and John Raby

CHARLESTON, W.Va. (AP) — Former Massey Energy CEO Don Blankenship was convicted Thursday of a misdemeanor count connected to a deadly coal mine explosion and acquitted of more serious charges.

A federal jury in West Virginia convicted Blankenship of conspiring to willfully violate mine safety standards. The misdemeanor charge carries up to one year in prison. Jurors did not find Blankenship guilty of a more serious conspiracy charge included in the same count that could have netted five years in prison. He was also acquitted of making false statements and securities fraud.

U.S. Secretary of Labor Thomas Perez said Blankenship's conviction sends a message that "no mine operator is above the law."

Perez made the statement in a news release Thursday after the verdict was announced in Blankenship's criminal trial in Charleston. Perez said there "must be accountability when people lose their lives because of the neglect of their employer."

House overwhelmingly backs 5-year transportation bill

By Joan Lowy

WASHINGTON (AP) — The House on Thursday overwhelmingly approved a 5-year, $305 billion bill that boosts highway and transit spending and assures states that federal help will be available for major projects. Senate approval was expected to follow later in the day.

The bill, approved by a 359-65 vote, doesn't include as much money or last quite as long as many lawmakers and the Obama administration would have liked. Nor does it resolve how to pay for transportation programs in the long term.

Despite that, the 1,300-page bill was hailed by industry and public officials as a major accomplishment that will halt the cycle of last-minute, short-term fixes that have kept the federal Highway Trust Fund teetering on the edge of insolvency for much of the past eight years.

Republicans leaders can point to the bill's passage as evidence of their ability to govern, and President Barack Obama can claim to have made progress on addressing the nation's aging and congested infrastructure, a major goal since the early days of his administration. Lawmakers in both parties effusively praised the bill as a model of bipartisan cooperation that didn't give everyone everything they wanted, but overall is an important step forward.

Groups appeal suspension of federal oil, gas drilling rules

By Mead Gruver

CHEYENNE, Wyo. (AP) — Environmental groups have appealed a judge's decision to suspend new rules for oil and gas drilling on federal land across the U.S. pending the outcome of a legal challenge to those rules.

The rules should be allowed to take effect to protect land, water and wildlife from practices including hydraulic fracturing, the Sierra Club and others argue in court documents.

On Sept. 30, U.S. District Judge Scott Skavdahl in Wyoming disagreed and blocked the rules from taking effect while the lawsuit contesting them moves ahead.

The environmental groups, which have sided with the federal government in the case, appealed Skavdahl's decision Nov. 27 to the 10th U.S. Circuit Court of Appeals. The case itself remains before Skavdahl in Casper.

Black lung data elusive as new coal dust rules take effect

By Dylan Lovan

LOUISVILLE, Ky. (AP) — Alarmed that black lung disease routinely goes unreported decades after it was discovered among miners, federal mine safety officials are touting new regulations that will step up monitoring for the coal dust that causes the deadly disease.

Beginning Feb. 1, the Mine Safety and Health Administration will require coal operators to increase the number of air samples taken in underground mines. The agency also will require miners working in the dustiest underground conditions to wear personal devices that give real time readings on air quality.

The government's top mine safety official, Joe Main, said pneumoconiosis, which kills about 1,000 coal miners a year, is likely afflicting far more miners than the data collected by his agency shows. From October 2010 through the end of September, mine operators reported 701 cases of black lung, but in a four-year span from 2010 to 2014, 3,675 miners were awarded black lung benefits, according to MSHA.

"It drives home the point we really need to do more to end this disease," Main, an assistant Labor secretary who runs MSHA, told The Associated Press.

NRG Energy CEO Crane resigns, company names COO new leader

By The Associated Press

NRG Energy shares rose Thursday after the power company announced the resignation of long-time CEO David Crane and named a replacement.

The company said Crane stepped down immediately, and he will be replaced by Executive Vice President and Chief Operating Officer Mauricio Gutierrez. Crane had served as CEO since 2003, a year before Gutierrez joined the Princeton, New Jersey-based company.

The company offered no reason in a brief statement announcing Crane's resignation.

Shares of NRG Energy fell to a 10-year low after the company said Tuesday that it agreed to sell power plants in Pennsylvania and New Jersey. Crane said then in a statement from the company that it was creating value for shareholders by streamlining its fleet of generating stations. He said the moves were part of an "ongoing and deliberate strategy of portfolio optimization."

VW lawyer: Consolidate lawsuits against carmaker in Michigan

By Cain Burdeau

NEW ORLEANS (AP) — A Volkswagen lawyer on Thursday said the company would like hundreds of federal civil lawsuits filed against the carmaker over its emissions cheating scandal to be consolidated in Michigan.

Volkswagen's attorneys were among hundreds of lawyers at a hearing in federal court in New Orleans to look at consolidating more than 460 lawsuits against the German carmaker.

The five judges of the Judicial Panel on Multidistrict Litigation heard from the string of lawyers making their cases for consolidation in the federal districts of their liking. The panel — which happened to be meeting in New Orleans — did not rule Thursday on where the lawsuits should be consolidated.

Volkswagen lawyer Jeffrey L. Chase asked the panel to choose Michigan, where VW is working with the U.S. Environmental Protection Agency's branch there on its investigation into the emissions cheating scandal.

Subject: RE: IUVP Waver CY 2015 - TG AVWXV02.5257

Hi Tobias,

Thanks for the quick reply. A standard waiver form may be the most efficient in the long run, but may result in providing more information than needed in some cases. For example, a waiver request for the 75 percent FUL vehicle with 104,000 miles, has a much lower threshold of information needed compared to a high mileage vehicle with 30,000 miles from a high sales test group that already has a failing vehicle. The potential environmental impact is considered and will include requests for emissions data, in some cases. But we don't need emissions data in most cases.

So, it's your call and I'm happy to provide feedback on a standard waiver form. It's a matter of getting the information needed for the majority of waiver decisions, and not being frustrated when we ask for additional information for those infrequent needs.

So, what I'm trying to say is that we don't want to overburden manufacturers. A standard waiver form that is sufficient for most waiver requests is adequate, and I'm happy to ask for more information for special circumstances. But if you want to build an all-encompassing form that provides all the information we could ever need to make a waiver decision, that's even better for me, but not expected. I don't mind asking for more information, as long as I don't have ask for the basic information each time.

Thanks,

Bill

Subject: RE: IUVP Waver CY 2015 - TG AVWXV02.5257

Hi Bill,

Sorry for all the confusion. I used the guidelines you sent to create a waver but obviously we will have to do better on the information we put into our waver.

We will create a draft for a standard waver form with the required information and send it to you for approval. This is just a general waver form to make sure we list all the information you'll need.

When EPA is happy with the kind of information we list in our waver form we will create specific wavers for the test groups we couldn't find the cars we were supposed to find.

Please let me know if that is acceptable.

Best regards

Tobias Glas

Subject: RE: IUVP Waver CY 2015 - TG AVWXV02.5257

Hi Tobias,

"How many Test Group XYZ vehicles are registered within a hundred mile radius of your test lab?" is a standard question Ex. 7 and I ask. In my experience, VW is the only manufacturer that has not been able to answer the question. Sending letters within 25 miles of the lab is far below the norm for VW's competitors, but this varies with circumstances. Low budget vehicles with 105,000 miles on them may be easily procured by letters within 25 miles of the lab, but waivers are not requested for such vehicles. The radius should increase as the difficulty increases. If a test group only has five registered vehicles within a 100 mile radius of the lab, and the incentive was generous, and loaner vehicles were at least as well appointed as the owner's vehicles, and all five refused to participate, it could be very easy for EPA to grant a waiver quickly.

On the other hand, exchanging piece-meal emails to get the information necessary to maintain a level playing field among the manufacturers, really slows things down. It is much more complicated to piece together multiple emails to construct a conclusion. When manufacturers construct a logical summary of relevant information supporting that a waiver is justified, EPA can very quickly respond quickly.

Information that may help includes providing the vehicle models in each test group to help determine whether the incentive is appropriate. Owners of economy cars are often willing to accept considerably lower incentives than owners of high priced luxury vehicles, and similar logic applies to the loaner vehicles being offered. If you send the retail prices along with the models, it saves us from looking it up, so we can respond even faster. But we can find the prices. We don't have the resources to determine the number of vehicles within a 100 mile radius of the test lab, and some of the other relevant statistics.

I'm not sure what else we can do to help you build a case to earn a waiver. I have sent you the attached document in the past (2x if I remember correctly), and I've contacted you in the past about the difficulty in making a waiver decision without the information needed.

On 11/17/2015, EPA granted a waiver for TG AVWXV02.5257 to move procurement and testing to low altitude, to relieve the high altitude procurement burden. But I don't have enough information to either deny or grant waivers for the other five vehicles/test groups listed in the table below, from your 11/17/2015 email waiver request.

Test Group	Stat$	# of Return Cards	# of First Mailing	# of Second Mailing	# of Third Mailing	# of Fourth Mailing	Required Mileage	Highest mileage return cards	
AVWXT		764	10	29	N/A	N/A	90K	83,274 & 79,000	Letters sent within 25mi
AVWXV		314	10	39	N/A	N/A	90K	70,933 & 68,000	Letters sent within 25mi
AVWXV		713	10	10	25	50	105K	90,000 & 82,254	Letters sent within 25mi
AADXV		20	20	20	71		105K	101240 & 69,006	Letters sent within 25mi
AVWXV		056	10	20			90K	81,054	Letters sent within

						& 75,356	25mi
AVWXV02.5259A5	10	20			105K	89029 & 49,199	Letters sent within 25mi
AVWXV02.5260572	15	15	N/A	N/A	50K	44,000 & 0	Letters sent within 25mi

Please call me if you think that will help. The "Alliance of Automobile Manufacturers" may be a good contact for determining "How many Test Group XYZ vehicles are registered within a hundred mile radius of your test lab."

Thanks,

Bill

Subject: RE: IUVP Waver CY 2015 - TG AVWXV02.5257

Hi Bill,

Here is a table that shows you our procurement data.

We don't have a number how many cars are registered in a 100 mile radius and I don't think we have a way to get that number.

For the last test group there are 23 cars in all of Colorado, so we sent a few customers two letters.

Test Group	Stat$	# of Return Cards	# of First Mailing	# of Second Mailing	# of Third Mailing	# of Fourth Mailing	Required	Highest Mileage return cards	
AVWXT	T01$250764	10	29	N/A	N/A	90K	83,274 & 79,000	Letters sent within 25mi	
AVWXW	W01$250314	10	39	N/A	N/A	90K	70,933 & 68,000	Letters sent within 25mi	
AVWXV	V02$250713	10	10	25	50	105K	90,000 & 82,254	Letters sent within 25mi	
AADXV	V02$250A20	20	20	71		105K	101240 & 69,006	Letters sent within 25mi	
AVWXW	W01$250356	10	20			90K	81,054 & 75,356	Letters sent within 25mi	
AVWXV	V02$250A5	10	20			105K	89029 & 49,199	Letters sent within 25mi	
AVWXV	V02$250672	15	15	N/A	N/A	50K	44,000 & 0	Letters sent within 25mi	

Let me know if you need anything else.

Best regards

Tobias Glas

Hi Tobias,

I have similar questions to the question in my earlier email today:

1. What was the distance radius from your test lab for the mailings?

2. How many vehicles with this test group is registered within a 100 mile radius or altitude above 4,000 feet?

3. For the vehicles with return cards, please report the mileage of the highest two vehicles.

Thanks,

Bill

Subject: IUVP Waver CY 2015

Hi Bill, hi Jim,

Overall we got pretty good responses for our CY 2015 IUVP program, but it is always difficult to find cars over 90 K miles.

So here are 6 wavers in one document where we request to test cars with lower mileage.

We got responses for all test groups and have cars lined up for testing but they are under the 75% of full Useful life.

Maybe you can give me a heads up so we can proceed with our testing.

Thanks for your help and have a good weekend.

Subject: RE: MY2017 Volkswagen Group of America Certification Preview Information
VW 2017 Cert Preview-via VW email-12-3-2015.pdf

Ex. 7 & all,

Thanks for providing your certification preview letter, however it doesn't seem to cover the details of your Tier 3 phase-in plans. During the 2017 certification preview meeting, please provide an outline of your Tier 3 phase-in plan, including:

1. 2017 (or 2017-2020) fleet exhaust average LDV/LDT1 and LDT2 (NMOG + NOx) roll-out plan (including your phase-in plan, projected sales by test group, list of Interim & final Tier 3 test groups (including test fuel used for each test group), projected fleet average NMOG + NOx value, and the EPA requirement (the fleet average standard).

2. 2017 (or 2017-2020) Tier 3 SFTP compliance plan, e.g. FELs for 2017MY test groups, projected sales, projected fleet average NMOG+NOx value, EPA standard, etc;

3. 2017 (or 2017-2022) Tier 3 evap percent phase-in compliance plan (for whichever evap option you will comply with in 2017MY) and the EPA requirement;

4. 2017 (or 2017-2022) Tier 3 projected fleet average evap compliance emission value for each vehicle class (e.g. LDV/LDT1, LDT2, HLDT, HDV)---with projected sales and FEL for each Tier 3 evap family; (note that for evaporative compliance, the projected sales for 2017 is federal only but 2018-2022 is nationwide sales)

5. 2017 (or 2017-2021) PM phase-in plan; projected sales & EPA requirement for each year;

6. 2017 OBD .020 leak detection compliance information;

7. An outline of which 1066 test procedures you will use in 2017MY (including any early voluntary procedures) ;

8. An estimate of the number of your test vehicles which will be tested using a road-speed fan;

9. An list any projected 2015/2016 early Tier2/Tier3 exhaust credits which you will accumulate; ref. 86.1811-17(b)(10 and (b)(11);

10. An outline of how you intend to comply with the Tier 3 lean-best torque/fuel enrichment requirements outlined in 86.1844-01(d)(11)(iii) which refer to 86.1811-17(d).

11. Any other Tier 3 questions you have or issues you would like to discuss.

Call me at 734-214-4450 if you have any questions.

EPA Advisors Suggest Need To Broaden NOx-SOx NAAQS Review Plan

EPA advisors are suggesting a need for the agency to broaden its draft plan for how to conduct a review of scientific data for a potential first-time joint nitrogen oxides (NOx) and sulfur oxides (SOx) national ambient air quality standard (NAAQS), including accounting for additional forms of nitrogen such as ammonia.

Boosting Pledges, McCarthy Says Utility Support Ensures ESPS Will 'Stick'

PARIS – EPA Administrator Gina McCarthy is highlighting the power sector's view that it can comply with the agency's landmark greenhouse gas rules for existing power plants as proof that the rule will "stick," while also seeking to reassure other countries at United Nations climate talks here that GOP attempts to block the rule ultimately will fail.

News Briefs

EPA Urged To Extend Climate ESPS FIP Comment Deadline

Utility groups and state regulators are asking EPA to extend the comment period for its proposed federal plan for implementing its greenhouse gas rule for existing power plants in noncompliant states, as well as the informal comment period for the agency's Clean Energy Incentive Program (CEIP), which they argue should also be housed under the regulatory docket.

EDF Methane Measurements Could Inform EPA Rules

A new Environmental Defense Fund (EDF) paper published Dec. 7 in the *Proceedings of the National Academy of Sciences* that reports findings from a series of methane measurement studies in Texas' Barnett Shale could inform EPA's pending first-time emissions standards for the oil and gas sector's methane releases.

Greenwire

AIR POLLUTION:

Conservative judge predicts court battle over EPA 'co-benefits'

Robin Bravender, E&E reporter

Published: Monday, December 7, 2015

As opponents sparred in court last week over the fate of a major U.S. EPA rule to slash mercury emissions, a federal judge forecast that the next big fight over the rule will center on how the agency measures so-called co-benefits.

The U.S. Court of Appeals for the District of Columbia Circuit is grappling with how to handle EPA's standards to cut power plants' emissions of mercury and other hazardous pollutants after the Supreme Court earlier this year ruled that the agency had failed to properly consider costs before it issued the rule.

During oral arguments before the appeals court Friday, Republican-appointed Judge Brett Kavanaugh pointed to concerns raised by Supreme Court Chief Justice John Roberts with EPA's

practice of counting health "co-benefits" in justifying the economic impacts of its clean air rules. Those are health benefits not directly attributable to reductions in mercury.

"He referred to that as an end-run and bootstrapping and disproportionate," Kavanaugh said of Roberts' comments. "I assume that's going to be the key battleground six months, a year from now, will be whether co-benefits are properly part of the analysis or not."

Kavanaugh and two of his Democratic-appointed colleagues are now weighing a request from industry and states to vacate EPA's rule while the agency brings it in line with the Supreme Court's ruling. But the three-judge panel on Friday appeared reluctant to gut the rule, in part because much of the industry has already made investments to comply with the standards and because EPA appears poised to reissue the same standards with revised considerations of costs (*Greenwire*, Dec. 4).

The agency has committed to fully addressing the high court's concerns by April 15, and EPA issued a proposed finding last month concluding that the benefits of its mercury standards justified the costs of the rule.

If the court agrees to keep the rule in place while EPA tweaks its finding, states and industry could return to court to challenge that finding. Kavanaugh and others have predicted that EPA's assessment of co-benefits will be a key part of their arguments.

"I think there is a pretty good chance that that will be front and center if there is a challenge" to EPA's finding that it is appropriate and necessary to regulate power plants' mercury emissions, said Jeff Holmstead, an industry attorney at Bracewell & Giuliani LLP who served as EPA's air chief during the George W. Bush administration. "A lot of people, including me, have been pretty critical of EPA relying on co-benefits to justify pretty much everything, including the Clean Power Plan."

The Clean Power Plan aims to slash greenhouse gas emissions from existing power plants. EPA has predicted the rule will lead to big cuts in soot and smog, curbing emissions of sulfur dioxide, nitrogen oxides and particulates along with reducing heat-trapping carbon dioxide. Industry contends that EPA's reliance on co-benefits double-counts health benefits for reductions of pollutants that aren't the regulation's focus.

Whether the co-benefits issue comes up in the mercury case or elsewhere, Holmstead said, "I think it will find its way into the courts."

EPA's analysis of the mercury rule found that it would cost industry $9.6 billion a year, while overall benefits would tally as much as $90 billion annually. Of those total benefits, up to $6 million would come from reduced mercury pollution. Most of the rest of the monetary benefits would stem from reductions in particulate matter, a pollutant that is not a target of the mercury rule.

During oral arguments in March, Roberts grilled the Obama administration's solicitor general, Donald Verrilli, about the analysis, suggesting EPA was using the mercury rule to get reductions in particulate matter that it wouldn't be able to otherwise under the Clean Air Act.

"It's a good thing if your regulation also benefits in other ways," Roberts said. "But when it's such a disproportion, you begin to wonder whether it's an illegitimate way of avoiding the different -- quite different limitations on EPA that apply in the criteria program."

Earthjustice attorney Jim Pew said EPA "doesn't have to consider benefits at all to satisfy the Supreme Court decision," and said industry challenges to the agency's calculations of co-benefits are "extraordinarily disingenuous."

John Walke, an attorney at the Natural Resources Defense Council, said Kavanaugh's comments Friday "could be him signaling reservations about EPA's co-benefits." But more likely, he said, it "reflects that industry has been raising that issue from day one."

Kavanaugh was the lone judge to dissent in the appeals court's divided ruling last year that upheld EPA's mercury rule before the high court shot it down.

But while Kavanaugh "has shown himself skeptical of EPA's position in this rulemaking and other rulemakings," Walke said, his "remarks from the bench won't influence what industry will do at all because they have already been doing what he is forecasting."

PARIS TALKS:

U.S., E.U. press other wealthy countries to pay their share

Lisa Friedman, E&E reporter

Published: Monday, December 7, 2015

LE BOURGET, France -- Should Qatar, the richest country in the world, help poorer nations deal with climate change? What about Singapore, the third-richest, where the gross domestic product per capita is five times higher than in Bulgaria? Or Saudi Arabia, where the average household income is higher than that of Italy, Spain and the Czech Republic?

The United States, the European Union and a growing number of vulnerable countries say yes. They are working to design language in a new climate agreement here that would upend the current structure that demands only the industrialized countries as designed in 1992 pay up.

The move is coming under fierce attack by the Group of 77 (G-77), which represents developing countries. U.S. Special Envoy for Climate Change Todd Stern today argued, though, that the poorest and most threatened by climate change should welcome the efforts.

SPECIAL SERIES

Paris Climate Talks provides in-depth coverage of the 21st U.N. summit to forge a new global agreement to reduce carbon dioxide emissions. Visit the special report.

"I think countries like the islands and the least developed countries are enthusiastically supportive. I'm not entirely sure what they do or they don't say in the councils of the G-77," he said. "What we're talking about here is to create a larger pool of funds."

At the moment, the debate is down to a battle of words. Europe wants language in a burgeoning deal to call for all countries "in a position to do so" to deliver money. Another wording option -- reportedly preferred by China -- is to ask that countries "willing to do so" write the checks.

Europeans, meanwhile argued the phrase "willing" is too wishy-washy. "Come on, seriously," one

negotiator said. "Countries like Singapore and South Korea and Bahrain? They're richer than us. How come they can't contribute?"

The answer -- like so many things in these negotiations -- lies in the age-old divisions between rich and poor nations, and the fraught nature of trying to shift those roles. Even some very poor countries like Sudan say they recognize that more countries might deliver more money in a new system but continue to argue to protect the wealthier nations in their bloc.

"Let first those who are committed, let them stick to their promises. If they are not giving, how do you expect others to give?" said Muawia Shaddad, a professor at the University of Khartoum and a member of the Pan African Climate Justice Alliance.

Ambassador Joyce Mxakato-Diseko, a South African diplomat who is chairing the G-77, complained last week that there are no criteria for countries "in a position to do so" and accused wealthy nations of trying to wriggle out of their 2009 pledge to mobilize $100 billion annually by 2020.

Saudi Arabian Minister of Petroleum Ali bin Ibrahim Al-Naimi holds a meeting on the sidelines of U.N. climate talks. His country is being asked to shoulder a greater share of the burden of helping poorer nations grapple with climate change. Photo by Lisa Friedman.

"In my family, I tell my children, 'You will clean your room.' I do not say that someone will clean the room. I say, 'You, John, will clean the room.' I say, 'You, Grace, will do the dishes.' There is no someone 'in a position to do so' will wipe the floor," Diseko said. "I need accountability, I really do need accountability. I need to know above all that the floor has been cleaned."

Meanwhile, activists who work on finance issues say they are largely in favor of efforts to expand the base of donors -- though many of them called for some set of criteria to delineate what countries do and don't have the capacity to deliver. Stern today said that's unlikely to happen.

"We think that the principle that is driving this agreement, I hope in a direction that will be successful in the end, is the notion that countries are in many respects nationally determining," he said. "The world buy-in ... is based on the notion that countries are able to make their own decisions, and I think we're going to stick with that," he said.

On the one hand, putting such language in the agreement would reflect a reality that's already happening. China has pledged $3.1 billion, more than the United States, to poor nations through a South-South Cooperation Fund, while developing countries ranging from Indonesia to Mongolia

have put money toward the Green Climate Fund.

Heather Coleman of Oxfam America said making it official in legal text is "important to send a signal that countries will continue to provide finance." At the same time, she noted, many nations are fearful that allowing language in a legal text will obligate them to deliver.

"There are some developing countries that definitely need to pony up," she said. "It's clear that countries like Singapore, countries like Qatar should be on the hook."

Meanwhile, she said, "A country like India should not be obligated to put forward finance but certainly should be encouraged to do something."

Developing nations are asking the United States and other wealthy countries to commit that a pledge to mobilize $100 billion annually by 2020 will materialize and expand, but complain that's being held hostage to a desire to break down barriers in the years afterward.

Stern described it as "all part of a package" but said he is confident countries will find common language. "We are open to various formulations," he said.

APPROPRIATIONS:

Jewell says Interior stands firm against omnibus riders

Phil Taylor, E&E reporter

Published: Monday, December 7, 2015

LAS VEGAS -- Interior Secretary Sally Jewell said Friday that her department is opposing all policy riders under consideration for a government spending bill that could undermine the Obama administration's lands, energy and wildlife policies, though she conceded that the negotiations are largely above her pay grade.

But Jewell said her Capitol Hill allies are playing a stout defense and that she believes the White House will reject one particular rider by Senate Energy and Natural Resources Chairwoman Lisa Murkowski (R-Alaska) to permit a road through the Izembek National Wildlife Refuge in Alaska.

"You can't start negotiating your own execution," Jewell said at the Western Governors' Association's winter meeting here last weekend, when asked about the administration's willingness to concede on some policy measures in order to pass a long-term spending measure.

Government funding authority ends Friday, but congressional aides have offered no signs of a breakthrough on either the spending measure or another must-pass bill to extend tax provisions (*E&E Daily*, Dec. 7).

"There are a lot of riders that would undo very, very important work that's been done over the years, including the work we've done on the sage grouse here, riders that would undo many years of work on stream protection in the context of mining," Jewell said. "We oppose those, and I think you'll see us staying together on that."

Yet Jewell also said she plays a relatively minor role in the spending bill negotiations between the White House and Senate and House leaders. Talks also involve non-Interior policy issues like U.S. EPA limits on global warming emissions and the ban on exporting crude oil, as well as non-

environmental issues including Syrian refugees.

Jewell said candidly that she "won't be party" to the highest-level discussions. "No one's calling me and saying, 'Could you give on this or could you give on that?'" Jewell said. "We have a clear focus that we don't want any of them."

Previously proposed environmental policy riders would affect Interior's protection of imperiled wildlife, including sage grouse and gray wolves, its regulation of oil and gas drilling, and its protection of streams from coal mining waste, as well as the president's ability to set aside Interior lands for permanent protection.

Murkowski last summer included a rider in the Senate's fiscal 2016 spending bill for Interior and EPA that would approve construction of a gravel road through Izembek, which she and other Alaska officials contend is critical to the safety of residents in King Cove who lack reliable access to medical care.

Jewell rejected the road and an associated land swap offer nearly two years ago in a move that infuriated Alaskans. She said the White House understands the importance of Izembek to migratory birds and a host of other wildlife.

"There's reasons that we the taxpayer have paid almost $54 million to not build this road, and the White House is well aware of that," Jewell said. "So I believe they'll stand firm with us on that."

But the road is a top priority for Murkowski, who chairs the Appropriations Committee panel that funds Interior. "I want to figure out a way to find safe passage for the people of King Cove, and I'm going to figure it out one way or another," she said last week when asked about the rider's inclusion in an omnibus.

Environmental groups are resolutely opposed to the road. "The rider would ensure irreparable damage to an internationally treasured landscape and set a precedent that would jeopardize wildlife refuge and wilderness protections on public lands across the country," said a memo released this morning by Defenders of Wildlife.

Other environmental riders believed to be on the negotiating table would block U.S. pledges to the Green Climate Fund and target the Clean Water Act jurisdiction rule, the stream protection rule, the White House's National Environmental Policy Act climate guidance, the social cost of carbon metric, Interior's proposal to overhaul public coal valuation, the new updated ozone standard, and the coal ash disposal rule.

Aides for House and Senate spending panels said this morning that negotiations continued through the weekend. One said an agreement is likely sometime this week.

However, it's unclear whether both sides will have language ready by today, as House Appropriations Committee Chairman Hal Rogers (R-Ky.) had hoped.

COAL:

Dems call for tougher penalties in wake of Blankenship verdict

Manuel Quiñones, E&E reporter

Published: Monday, December 7, 2015

Congressional Democrats are calling for tougher penalties for violations of federal mine safety laws in the wake of former Massey Energy Co. CEO Don Blankenship's conviction in a safety case.

A federal jury last week found Blankenship guilty of conspiring to violate mine safety standards. The misdemeanor carries up to one year in prison (*E&ENews PM*, Dec. 3).

Even though prosecutors and groups welcomed the verdict as "unprecedented," Democratic lawmakers say it's further evidence of the need for a new mine safety law.

"I am troubled that criminal behavior involving a conspiracy to commit willful violations of mandatory mine safety and health standards can only result in a mere misdemeanor penalty that cannot exceed one year in prison even when a mine operator recklessly exposes a miner to significant risk of serious injury, serious illness or death," said Virginia Rep. Bobby Scott, top Democrat on the House Education and the Workforce Committee.

Investigations into the 2010 explosion at Massey's Upper Big Branch mine in West Virginia accused Blankenship of being more focused on profits than on safety.

"A misdemeanor sanction is a woefully insufficient deterrent for criminal conduct for an operator who repeatedly puts production ahead of safety requirements," Scott said Friday.

Democratic legislation, H.R. 1926, would impose a felony penalty, up to five years in prison and up to $1 million in fines for operators that jeopardize the lives of workers.

Mining companies and many of their allies on Capitol Hill, particularly on the Republican side, have rejected the need for new legislation. Rather, they say regulators should better use the tools already at their disposal.

The National Mining Association has also been touting its own mine safety initiative and is calling on regulators to take a more cooperative approach to enforcement.

CAMPAIGN 2016:

Sanders climate plan seeks drastic emissions reductions

Jennifer Yachnin, E&E reporter

Published: Monday, December 7, 2015

Vermont Sen. Bernie Sanders (I) today unveiled an aggressive climate change platform, vowing to enact a carbon tax in an effort to reduce greenhouse gas emissions by 80 percent by 2050, as well as pledging to "ban fossil fuels lobbyists from working in the White House" if elected.

In an expansive proposal posted to his campaign website, Sanders -- who is competing for the Democratic presidential nomination against former Secretary of State Hillary Clinton and former Maryland Gov. Martin O'Malley -- echoed his prior criticisms of the fossil fuel industry, as well as his desire to make significant federal investments in both energy efficiency and renewable resources including wind and solar power.

"Right now, we have an energy policy that is rigged to boost the profits of big oil companies like Exxon, BP, and Shell at the expense of average Americans. CEO's are raking in record profits while climate change ravages our planet and our people -- all because the wealthiest industry in the history of our planet has bribed politicians into complacency in the face of climate changes," Sanders said in a statement. "Enough is enough. It's time for a political revolution that takes on the fossil fuel billionaires, accelerates our transition to clean energy, and finally puts people before the profits of polluters."

In his plan, Sanders called for a carbon tax, an idea that has gained little traction in a Republican-controlled Congress, in an effort to cut pollution by 40 percent by 2030 and by more than 80 percent by 2050.

"Bernie will tax polluters causing the climate crisis, and return billions of dollars to working families to ensure the fossil fuel companies don't subject us to unfair rate hikes," Sanders' website states. "The carbon tax will also protect those most impacted by the transformation of our energy system and protect the most vulnerable communities in the country suffering the ravages of climate change."

A Sanders administration would also look to rein in tax benefits to the fossil fuel industry, as well as banning any oil or gas lobbyists from holding future jobs in the White House.

"Massive lobbying and unlimited Super PAC donations by the fossil fuel industry gives these profitable companies disproportionate influence on our elected leader. This practice is business as usual in Washington and it is not acceptable," Sanders said. The senator's plan also cites his support for efforts to undo recent Supreme Court decisions that gave rise to significant spending by third-party groups, as well as supporting public financing of federal elections.

Sanders likewise echoed his support for a federal investigation into whether Exxon Mobil Corp. misled the public about climate change for almost four decades, vowing to "bring climate deniers to justice so we can aggressively tackle climate change."

The senator called for a Justice Department inquiry following reports from *InsideClimate News* and a collaboration between the *Los Angeles Times* and the Columbia University Graduate School of Journalism that found Exxon discovered the threat of climate change almost 40 years ago but paid millions of dollars to keep the issue out of the public eye (*ClimateWire*, Oct. 28). Exxon has since pushed back on the validity of the reporting.

"It is an embarrassment that Republican politicians, with few exceptions, refuse to even recognize the reality of climate change, let alone are prepared to do anything about it," Sanders said.

Moratorium on nuclear

In addition, Sanders' plan focuses on making new investments in solar and wind power energy production. He said the administration would create 10 million new energy-related jobs by establishing a "100 percent clean energy system."

His proposal would also seek to curtail the use of nuclear energy, and includes a moratorium on nuclear power plant license renewals in the United States.

"Bernie believes that solar, wind, geothermal power, and energy efficiency are proven and more cost-effective than nuclear plants -- even without tax incentives -- and that the toxic waste byproducts of nuclear plants are not worth the risks of the technology's benefit," Sanders' website states.

The senator similarly vowed to ban offshore drilling, drilling in the Arctic Ocean and mountaintop coal mining.

Sanders also pledged to seek an increase in fuel economy standards, boosting requirements to 65 mpg by 2025, an increase over the current goal of 54.5 mpg by that time.

The proposals garnered immediate praise from environmentalists, including those at the Sierra Club and NextGen Climate, who have yet to endorse in the Democratic primary.

"We commend Senator Sanders for proposing this ambitious energy plan. These proposals are rooted in a clear recognition of the fact that the top priorities for a responsible energy policy are cutting dangerous carbon pollution as fast as possible, and providing even further momentum for the booming clean energy economy," Sierra Club Executive Director Michael Brune said in a statement. "We can't afford to wait a minute longer to tackle the climate crisis, or to ensure that all American families have clean air to [breathe] and clean water to drink."

But American Petroleum Institute spokesman Reid Porter dismissed Sanders' plan in a statement to *Greenwire*, asserting the senator's proposals are peppered with "false choices."

"The United States is the global leader in oil and natural gas production. We are creating millions of jobs, generating billions in revenue for the government, and we are leading the world in reducing carbon emissions. We are second to no one. Denial of this reality is preposterous, and it does a disservice to our nation's pursuit of long-term energy security and to the thousands of families who rely on affordable and reliable energy," Porter said. "It's not a matter of whether we need oil and natural gas to fuel our economy, but where will we get it. We will either continue to rely on energy from less stable parts of the world or we can focus on the developing America's abundant resources right here at home."

POLITICS:

Obama's Cabinet orchestrates sales pitch for Clean Power Plan

Jean Chemnick and Joel Kirkland, E&E reporters

Published: Monday, December 7, 2015

LE BOURGET, France -- President Obama's top advisers have arrived in force here today to begin a final push toward a global climate accord, vowing that U.S. carbon reductions are here to stay.

U.S. EPA Administrator Gina McCarthy, Energy Secretary Ernest Moniz and Secretary of State John Kerry are among the administration officials who have joined 40,000 national delegates, global warming activists and journalists gathering in this Paris suburb. Agriculture Secretary Tom Vilsack and Interior Secretary Sally Jewell participated in the first week of the U.N. summit but have since departed.

The administration's collective task is to convince a skeptical world that Obama's Climate Action Plan will survive his presidency, and it has them singing from the same hymnal.

SPECIAL SERIES

Paris Climate Talks provides in-depth coverage of the 21st U.N. summit to forge a new global agreement to reduce carbon dioxide emissions. Visit the special report.

In an interview with *Greenwire*, McCarthy said interagency cooperation was strong in the run-up to the conference because securing an agreement is such a vital part of Obama's legacy.

"It has been incredibly seamless in terms of both planning for this event and working it through," she said. "We have coordinated doing energy Cabinet meetings totally focused across the administration on Paris."

Agencies have held a morning phone call in the lead-up to the conference to make sure they're all on the same page, and the White House has been offering guidance. "Our communications people talk to each other," McCarthy said.

McCarthy and Moniz took the same United Airlines flight Friday night, as did White House Council on Environmental Quality chief Christy Goldfuss. After landing at Charles de Gaulle Airport on Saturday morning, they made their first appearances jointly later that day, where the Cabinet members pledged the United States would make good on its commitments to cut greenhouse gas emissions.

McCarthy and Moniz told their international audience that federal carbon regulations are legally enforceable, even if Congress isn't happy with the policy and a hostile Republican president is elected in 2016.

"We have political realities in terms of how we can move forward," Moniz said today. "The president made clear -- and I think it's very important -- that ultimately we do eventually have [to have] legislation that provides an economywide approach. But in the meantime, we will emphasize executive authorities that already exist for meeting our ambitious targets."

EPA's Clean Power Plan rule to cut emissions across the electricity sector is a core policy component supporting the U.S. commitment ahead of the Paris talks to reduce emissions at least 26 percent below 2005 levels by 2025. The U.N. climate summit, led by France, is pressing for an agreement by the end of this week.

"This rule is going to stand the test of time," McCarthy said, referring to the Clean Power Plan regulations. "This rule, despite what one might read, is being actively engaged in by every state in the United States."

McCarthy and her air policy chief, Janet McCabe, who is also in Paris, have been the administration's top salespeople on climate rules for the past two years, after Obama directed the agency to get moving on power-sector regulations. As the talks enter their critical second week, McCarthy said one of her roles will be to meet with delegations and answer questions about her agency's flagship climate policy.

The power-sector regulation faces stiff opposition from Republican-led states in the South and other coal-dependent states. There are court challenges and vows to overturn the rule from nearly every candidate for the Republican presidential nomination.

But McCarthy, McCabe, White House senior climate and energy adviser Brian Deese, Senate Democrats and even some friendly electric utilities are trying to beat back any narrative that the United States might ultimately default on its climate commitments, walking away from a Paris deal as it did from the Kyoto Protocol.

McCarthy has been meeting with counterparts from other countries since the Clean Power Plan was first proposed in 2014, and many of the heads of delegation here in Le Bourget are now acquaintances.

"We have had a steady stream of countries coming in asking to understand it, is it going to last, what are all these lawsuits, what is Congress doing?" she said. She said the international community generally accepts that the rule is likely to withstand the coming challenges.

"EPA is recognized for its technological expertise in this area, as well as how well we do defending the Clean Air act and our actions," she said.

The White House has engaged extensively with China and India, the world's first- and fourth-largest carbon emitters, in hopes of paving the way for a climate deal. For that, it had to convince leaders of both countries that the U.S. economy will adopt carbon controls.

It's trying to shift discussions to the U.S. priorities for a final agreement, including establishing a five-year review period and an accountability system for checking nations' progress on cutting emissions.

Taking the stage in a grand hall inside the 19th-century Petit Palais art museum, before loud applause from global warming activists, Kerry hammered home the U.S. position that both industrialized and rich developing nations such as China and South Korea are equally responsible for slashing greenhouse gas emissions.

"We feel very strongly in the United States that in 2015, it is time to get rid of this rigid differentiation between developed and developing," Kerry said.

"It does no good to come to Paris and have a great big meeting and get out of here and say 'there are a lot of goals' if they're not being implemented and you're not moving down the road."

Kerry spoke about the need for the largest-emitting nations to play an active role in cutting emissions. The issue about "differentiation" is a critical paradigm shift for the U.N.-sponsored talks. China, India, Brazil and other big developing countries for the past two decades have insisted on being treated differently. That was put into place in the 1990s as the path forward.

Also today, former California Gov. Arnold Schwarzenegger (R) made a rousing speech before the plenary of international delegates. Meanwhile, back in a decked-out museum in central Paris, California's current governor, Jerry Brown (D), and energy-sector CEOs rallied activists.

'U.S. has taken clear action'

Any hope of Congress forging a political consensus around carbon came to a screeching halt after Obama returned from the last major U.N. climate summit in 2009. In 2010, the Senate let a House-passed carbon cap-and-trade bill die.

That history -- and the long memories of delegates who recall Senate Republicans' refusal to ratify the Kyoto accord in 1997 -- is some of the context around the administration's presence here.

"The U.S. has taken clear action," said McCabe, EPA's assistant administrator for air and radiation. "It's important that people see the United States has done that."

In a panel discussion sponsored by the Edison Electric Institute, PG&E Corp. CEO Anthony Earley said cutting U.S. emissions will rely on electric utilities and states driving toward the Clean Power Plan's target: cutting power emissions 32 percent below 2005 levels by 2030.

"From a deployment standpoint, we've shown that utilities are really the perfect organizations to leverage the scale we have in accelerating the transformation of the system."

And Earley leaned on the notion that utilities -- under some pressure from rooftop solar companies and other distributed generators -- are still the backbone of the system, warning that policymakers shouldn't "take it for granted."

The cost of implementing changes is "manageable," he asserted.

Multiple threads of discussion around deployment of energy technology are going on across Paris. And leaders here say "signals" are needed for the private sector to start spending billions on energy technology needed by India and other large developing countries.

Microsoft co-founder Bill Gates partnered with Moniz and the White House on a public-private partnership deal designed to raise billions of dollars through 2020. It would couple billions of dollars in investment from the wealthiest people in the world with a doubling of research and development spending by 20 nations. Under the plan, U.S. R&D spending on cleaner forms of energy technology would go from about $2 billion to $5 billion.

On a separate track is a call for $100 billion in financing for poor and developing countries to deploy new technology and protect themselves from the worst effects of global warming.

As this is happening, the small cadre of U.S. utility officials -- mostly sustainability officers -- is talking about Clean Power Plan implementation.

In California, deploying massive amounts of solar and wind power could eventually require a regional Western market, Earley told *Greenwire*.

"We need to create regional electricity markets," he said. "The hallmark of renewables is that they're unpredictable; we don't control them. If you have a regional market, we'll be better able to trade this clean energy."

NOTEBOOK:

Mayors wine, dine with movie stars

Lisa Friedman, Jean Chemnick and Katie Howell, E&E reporters

Published: Monday, December 7, 2015

LE BOURGET, France -- As haggard negotiators struggle to eke out a climate deal in the industrial northern suburbs of Paris, 450 mayors from around the world have been wining and dining with movie stars and ambassadors across the capital city and patting themselves on the back for doing more than the most progressive national governments could hope to achieve.

The U.S. Conference of Mayors, which sent a delegation to Paris for the climate summit, today unveiled a new report that touts the efforts of U.S. mayors as leaders on climate over the last 10 years.

SPECIAL SERIES

Paris Climate Talks provides in-depth coverage of the 21st U.N. summit to forge a new global agreement to reduce carbon dioxide emissions. Visit the special report.

"USA mayors and others throughout the world continue to lead and show that local climate action is meaningful and making a difference in curbing harmful carbon emissions," Baltimore Mayor Stephanie Rawlings-Blake, who is also president of the group, said at an event today at the residence of U.S. Ambassador to France Jane Hartley. "A number of my mayoral colleagues are already in their second decade of climate leadership. This serves as a reminder that a big part of our success in protecting our planet will turn on how well we support and accelerate local level climate action throughout the world."

The mayors on Friday met at Paris' opulent Hôtel de Ville, where they sipped fine French wine, heard from movie stars Leonardo DiCaprio and Robert Redford, and adopted the Paris City Hall Declaration, which restates local efforts to fight climate change and calls for national negotiators at the climate summit to do the same.

"Mayors are a powerful group. You are the catalysts. Be bold, be courageous -- the world is watching you," DiCaprio told the mayors Friday, according to the London *Guardian*.

Inslee, Brown knock 'knucklehead' Republicans

Governors, too, are touting their efforts to take subnational action on climate change. Govs. Jerry Brown of California and Jay Inslee of Washington, both Democrats, have advanced statewide emissions-reduction policies. And they took aim at Republicans for their continued opposition to climate action and science.

"America is really divided," Brown told an international audience in Paris this weekend. But he said that brokering an agreement would help underline how out of step U.S. Republicans are.

"Signing a good agreement will help us overcome what I call the mindless opposition, because there are a lot of people here who are not on the left who will be signing this agreement," Brown said. "And I think that idea will get through to these knuckleheads."

Inslee, who served in the House before becoming Washington's governor, said that pricing carbon would help facilitate "the green energy transition."

"On the West Coast, we live on innovation, it's our stock and trade," Inslee said. "It's what we sell as intellectual capital."

Washington state also has "knuckleheads," he said, like the state legislators who blocked his proposal to tax carbon. He now plans to use existing legal authority to cap emissions.

The two governors shared the stage with the mayors of Oakland, Calif., and Vancouver, Wash., and the environment minister of British Columbia.

China will honor its financial pledge

China will make good on its financial commitment on climate change, even if the United States doesn't, the Chinese head of delegation Su Wei told E&E.

China's head of delegation, Su Wei (left) speaking through an interpreter at the U.N. climate conference. Photo by Lisa Friedman.

Asked to comment on the U.S. Congress' insistence that the $3 billion pledge over four years that President Obama made to the Green Climate Fund will never see the light of day, Su said it would be "most unfortunate" if the money were blocked.

"It would not be positive to the atmosphere in Paris, and every leader is determined to make Paris a successful conference," he said. "The financial issue is one of the key issues that needs to be settled here in Paris.

"Having said that, China's contribution to the South-South Cooperation Fund is not dependent on what developed country parties make," he said. No matter what happens, that $3.1 billion pledge "would remain as it is now."

Inside the E.U.'s secret meeting room

Isaac Valero-Ladron, a senior adviser to the European Union's energy commissioner, gave E&E a sneak peak at the bloc's coordination room over the weekend to offer a sense of how challenging it is to develop a common position.

E.U. negotiators meet daily in this conference room to hash out agreements. Photo by Lisa Friedman.

Each morning, lead negotiators from the 28 member nations meet in the vast conference room in the European pavilion for an hour and a half, often going paragraph by paragraph through the text.

That's only the beginning of several such meetings throughout the day. What solar-loving Germany can live with on calls for decarbonization, or a 1.5-degree temperature-rise goal, for example, might be very different than that of coal-hungry Poland.

"We are not a country. We are 28 countries," Valero-Ladron said.

Overflow delegates bring flair to drab meeting rooms

Dark suits are de rigueur at the conference complex where negotiations are underway, but every now and then a splash of color can be seen -- typically around the Brazil delegation's headquarters.

Brazilian activist Jose de Lima Kaxinawa, a member of a tribe that lives in the Amazon rainforest of Brazil and Peru, is one of hundreds of "party overflow members" at the climate talks.

Brazil applies a unique open-door policy that allows anyone to join the government's delegation to the talks if they pay their own way. The nation has 800 delegates -- by far the largest number of overflow members, who wear purple stickers that indicate they can be asked to leave meetings when there isn't enough room.

The United States and China also have large representations, but they don't dress as vibrantly.

De Lima Kaxinawa has been wearing a flashy orange, yellow and red headdress and a colorful robe, according to Reuters.

Other Brazilian campaigners wear traditional dress or casual clothes. Francinara Soares Martins had on bone earrings and brightly colored feathers yesterday while handing out deforestation posters.

"We are very inclusive," Luiz Alberto Figueiredo Machado, a former Brazilian foreign minister, told Reuters of the overflow member policy.

Perhaps they should have taken the Chunnel

Green groups are blasting British leaders and negotiators for flying to the Paris negotiations.

Friends of the Earth called out Prime Minister David Cameron and International Development Secretary Justine Greening and her team for flying to the COP 21 talks last week.

The return flight from London's Heathrow airport to Paris' Charles de Gaulle emits 122 kilograms of carbon dioxide per person, according to Eurostar. By comparison, a train trip would emit 10.9 kilograms per person, Eurostar said.

"It's perfectly easy to understand that many people will find British ministers flying to a climate conference to be hypocritical," said Craig Bennett of Friends of the Earth, according to the London *Guardian*.

Pope prays for the negotiations

Pope Francis yesterday prayed for the success of the Paris negotiations.

"For the sake of the common home we share and for future generations, every efforts should be made in Paris to mitigate the impact of climate change and, at the same time, to tackle poverty and to let human dignity flourish," Francis said from the Vatican, according to Vatican radio and reported by *USA Today*.

NEGOTIATIONS:

Russia won't block a climate deal -- Putin

Published: Monday, December 7, 2015

Russian President Vladimir Putin has signaled that his negotiators will not block an agreement backed by other major countries at the U.N. climate change conference underway in Paris.

Though Russia has been a major player in global climate talks since 1992, Putin has not put much priority on environmental initiatives and has expressed skepticism about climate change (*ClimateWire*, Aug. 25, 2010).

According to Paris conference participants, however, Putin had assured German Chancellor Angela Merkel that he would not sink a deal. Russia has met with criticism for submitting an emissions goal that it has essentially already met, requiring few changes to its economy (*ClimateWire*, April 6).

Russia also stands to gain from any shift to cleaner-burning natural gas, as it has some of the largest reserves in the world (Harvey/Taylor, London *Guardian*, Dec. 7). **-- BTP**

PEOPLE:

France's top climate diplomat wears host hat, too

Published: Monday, December 7, 2015

France's top climate change negotiator must not only help work out a deal in her country's interests at the climate change conference currently underway outside of Paris, but also play the role of organized host to 196 delegations and a bevy of other attendees.

From installing lighting in each workspace that is soft and comforting to ensuring that the conference's cuisine befits France's culinary reputation to acting as a mediator between disagreeing sides over a deal, Laurence Tubiana has had a lot on her mind these past 18 months.

"This is an incredibly hard job, and she doesn't come to the job as a deeply seasoned professional diplomat," U.S. senior climate envoy Todd Stern said of Tubiana. "But using her think tank background, and the signature French Embassy events -- it all affects the larger buy-in to Paris."

Tubiana has indeed drawn on France's elegant embassies worldwide to host events and dinners with key political and business leaders and journalists to make sure everyone is on the same page (*ClimateWire*, Dec. 7). She has worked to avoid a repeat of the 2009 climate conference in Copenhagen, Denmark, where many blamed the Danish government's poor organization and lack of openness for helping sink the talks.

"Climate change is about ecosystems," Tubiana said. "Climate change negotiations are about ego-systems" (Coral Davenport, *New York Times*, Dec. 6). **-- BTP**

ENERGY EFFICIENCY:

Nations, Ikea plan looks to screw in 10B LED bulbs

Published: Monday, December 7, 2015

As a way to ratchet down the 5 percent of global emissions caused by lighting, governments such as China, India and the United States and large companies such as Ikea have pledged to fit 10 billion ultra-efficient lightbulbs worldwide.

India and China have said they will increase production and sale of light-emitting diodes, or LEDs, and Ikea, the Swedish furniture multinational, said it will stock its shelves with more energy-efficient bulbs to sell to its customers.

Pollution emitted from lighting sources makes up 15 percent of the world's electricity consumption. An overnight transition to LED lights could save approximately 735 million metric tons of emissions, or enough to displace around 250 coal-fired power plants.

"If we have 20 years of the global carbon budget left, we need to create products that are fantastically energy-efficient and roll them out to scale very fast," said Steve Howard, Ikea's chief sustainability officer (Arthur Neslen, London *Guardian*, Dec. 7). **-- AK**

SUPREME COURT:

Justices reject challenge to Colo. renewable standard

Robin Bravender, E&E reporter

Published: Monday, December 7, 2015

The Supreme Court today refused to hear an appeal in a case challenging Colorado's renewable energy standard.

In a short order issued this morning, the high court rejected a request by the anti-regulatory nonprofit Energy & Environment Legal Institute challenging Colorado's requirement that 20 percent of all electricity sold in the state come from renewable sources.

Lawyers for the nonprofit argued that the standard illegally regulated economic activity beyond the state line, and they asked the justices to take on the issue after a three-judge panel on the Denver-based 10th U.S. Circuit Court of Appeals unanimously upheld the standard earlier this year (*Greenwire*, Oct. 16).

David Schnare, an attorney representing the Energy & Environment Legal Institute in the case, said today that petitioners may ask the justices to reconsider their refusal to hear an appeal in the case, *Energy & Environment Legal Institute v. Joshua Epel*. Schnare said he believes the ruling from the 10th Circuit conflicts with another ruling from the San Francisco-based 9th U.S. Circuit Court of Appeals in the case *Sam Francis Foundation v. Christies Inc.*, regarding whether a California law regulating art sales violates the dormant Commerce Clause, which bars states from discriminating against interstate commerce.

"The major reason that they take these kinds of cases is to cure circuit splits," Schnare said.

Michael Freeman, a Colorado-based attorney at Earthjustice representing environmentalists in the case, said today that the "argument that there's a flaw in the 10th Circuit ruling is meritless." He added, "the courts have consistently rejected the theory" asserted by the Energy & Environment Legal Institute "that incidental impacts on commerce" somehow violate the dormant Commerce Clause.

No word on high-stakes water cases

Supreme Court watchers were waiting for news today about whether the justices would agree to hear pending wetlands cases, but the court has punted on making that decision.

The justices are weighing whether to hear two cases regarding whether courts can review federal regulators' determinations about which areas are subject to Clean Water Act protections. The Obama administration and property rights advocates have asked the high court to weigh in on the issue after lower courts have offered conflicting opinions. Many court watchers predict that the justices will agree to hear at least one of the cases (*Greenwire*, Oct. 30).

The justices are now expected to consider whether to take the cases, *U.S. Army Corps of Engineers v. Hawkes Co. Inc.* and *Kent Recycling Services LLC v. U.S. Army Corps of Engineers*, at their conference this Friday and may announce their decision later this week or early next week.

SCIENCE:

Climate change may not have driven Vikings from Greenland

Published: Monday, December 7, 2015

For nearly five centuries, thousands of Vikings eked out a living on Greenland's harsh shores before unexpectedly departing in the mid-15th century. Until now, their disappearance has often been

explained as a result of changing climate, but new research is raising doubts on that theory.

Norse settlement of Greenland occurred soon after the start of the "Medieval Warm Period," a 300-year period of more temperate climates in most parts of the world that was followed by the "Little Ice Age," which made weather harsher. A study published last week in *Science Advances* asserts that the changing climate was not likely a big factor in the Vikings' retreat from Greenland, since the region's glaciers appear to have been nearly as large during the Medieval Warm Period as they were during the Little Ice Age.

"This study suggests that while the Vikings may have left Iceland when it was relatively warm, they arrived in the Baffin Bay region, and it was relatively cool," said lead author Nicolás Young, a professor at Columbia University's Lamont-Doherty Earth Observatory. "So for their initial settlement, and the first few centuries when they were there, they persisted and thrived somewhat during a relatively cool climate. And so it's sort of a stretch to say that a cool climate is what drove them out of the region, when they demonstrated that they could be somewhat successful during a cool climate."

The scientists were able to measure the extent of the glaciers over time from their impressions left in the earth and could date the soil and rocks left behind as they retreated.

"There's certainly strong evidence in Europe that that was a real thing," said Young of the Medieval Warm Period. "But it's certainly not a global event; it was patchy, with quite a bit of variability" (Chris Mooney, *Washington Post*, Dec. 4). **-- BTP**

BUSINESS:

Food giants have bigger carbon footprint than some countries

Published: Monday, December 7, 2015

Global food production companies such as Cargill Inc., Tyson Foods Inc. and Yara International ASA have larger carbon footprints than many countries, including the Netherlands, Vietnam or Colombia, a new analysis shows.

The realization from Global Justice Now highlights the role the agri-food sector plays in climate change, which contributes as much as 29 percent of global emissions, although the industry has received far less attention than the energy industry in the past.

Moreover, the amount of emissions that agriculture businesses report is said to be only a fraction of actual pollutants the companies release, resulting in millions of metric tons of pollution that has been kept from the public.

According to Global Justice Now's new findings, U.S. animal feed manufacturer Cargill, for example, reports annual emissions of 15 million metric tons, but if it included growing feed crops, the number would spike to some 145 million metric tons.

Tyson, the largest beef producer in the United States, says it emits 5 million metric tons but does not include keeping livestock in that number, which would increase the amount to 34 million metric tons. Yara, one of the world's largest fertilizer producers, emits nearly 12.5 million metric tons but does not take into account its use of fertilizers, boosting that number to 75 million metric tons.

"They shouldn't be able to indulge themselves in the fiction that they are not culpable for these

indirect climate impacts," said Alex Scrivener, policy officer at Global Justice Now and co-author of the analysis (Tom Levitt, London *Guardian*, Dec. 7). **-- AK**

FEDERAL AGENCIES:

Government power consumption hits new low

Hannah Hess, E&E reporter

Published: Monday, December 7, 2015

The U.S. government, one of the largest energy consumers in the world, cut its fuel use to the lowest levels in the past 40 years, according to an U.S. Energy Information Administration analysis released today.

The decline indicates progress on President Obama's plan to reduce the greenhouse gas emissions of federal agencies and make federal buildings more efficient, EIA noted, with a decline in jet fuel consumption by the Defense Department accounting for the biggest change (*Greenwire*, Nov. 23, 2015).

As part of the plan, the White House aims to reduce per-mile greenhouse gas emissions from agency fleet vehicles by 30 percent over the next decade. Over the previous five fiscal years, greenhouse gas emissions from the federal fleet have fallen by a total of 3 percent, EIA said.

Data from the Department of Energy's Federal Energy Management Program show energy usage in fiscal 2014 -- 0.94 quadrillion British thermal units -- declined to the lowest level since the government started monitoring consumption in 1975. Energy bills totaled $23.1 billion, falling from $24 billion in 2013 (*Greenwire*, Feb. 4).

Vehicles and equipment energy usage accounted for 61 percent of all federal energy consumed, with the remainder consumed by facilities. Energy consumption by DOD made up 78 percent of total federal energy use.

Among the White House's targets is an increase in alternative-vehicle fuels in the federal fleet. Since fiscal 2010, the number of traditional gasoline-powered vehicles owned by government agencies has declined 10 percent, EIA said.

AIR POLLUTION:

Health groups press EPA for new methane emissions limits

Sean Reilly, E&E reporter

Published: Monday, December 7, 2015

U.S. EPA should forge ahead with new emissions limits for methane and volatile organic compounds (VOCs) from existing oil and natural gas operations, similar to what it is already proposing for new sources, more than 600 nurses, doctors and other health care professionals said in a letter Friday.

"We need comprehensive rules that cover existing oil and gas wells and infrastructure to reduce

methane emissions and the impact on climate," the signers told EPA Administrator Gina McCarthy. "We unite in urging EPA to move quickly to address emissions from existing sources as well."

The letter, released late Friday by the American Lung Association, fell on the final day for public comments on EPA's draft regulations to limit methane and VOC releases from new and modified oil and gas operations. Among other features, the draft, unveiled in mid-August, would require the industry to find and repair leaks and limit emissions from equipment used at natural gas transmission compressor stations (*Greenwire*, Aug. 18).

In a news release today, the Interstate Natural Gas Association of America, which represents the pipeline industry, expressed particular concern with that facet of the proposed regulations, warning that they could lead to increased methane emissions because operators would often have to "blow down" pipelines or compressors to make repairs. The news release followed some 80 pages of comments filed by the association Friday.

The oil and gas sector is the nation's largest industrial source of methane, a greenhouse gas that EPA ranks as 25 times more potent than carbon dioxide in its global warming potential. In September, the top lawyer for the agency's Office of Air and Radiation said it will become clear within the next few years whether the proposed methane rules should be broadened to cover existing facilities (*Greenwire*, Sept. 29).

CHINA:

Beijing issues 1st 'red alert' on smog

Published: Monday, December 7, 2015

Beijing officials issued the city's first-ever "red alert" over smog levels, prompting schools to close and construction to cease in the capital city.

Pollution levels in Beijing are currently lower than last week when an "orange alert" was issued, but that ranking has since been bumped in status because of projected increases in particulate matter in the coming days.

An air pollution monitor operated by the U.S. Embassy in Beijing reported that the levels of particulate matter (PM2.5) are 10 times above recommended limits. China's CCTV news channel reported that some parts of Beijing have a visibility of 660 feet.

The smog is a result of coal-powered plants and heating systems, vehicle emissions and dust from construction sites, which are lingering in the city because of humidity and a lack of wind.

The red alert has never been used before and will last until at least noon local time Thursday, when a cold front is expected to disperse the smog (BBC News, Dec. 7). **-- AK**

CLEAN POWER PLAN:

NARUC's Kavulla says federal compliance plan not acceptable to states

Published: Monday, December 7, 2015

How are legal challenges to the Clean Power Plan affecting regulators' ability to effectively plan for the future under the rule? During today's OnPoint, Travis Kavulla, president of the National Association of Regulatory Utility Commissioners and a member of the Montana Public Service Commission, discusses how his state is working toward compliance, while concurrently legally challenging the rule. He also explains why the Clean Energy Incentive Program is not being prominently considered in compliance discussions in his state.

Click here to watch today's OnPoint.

POWER PLAN HUB:

McCarthy takes power plant rule road show to Paris

Emily Holden and Rod Kuckro, E&E reporters

Published: December 7, 2015

U.S. EPA chief Gina McCarthy takes her campaign for the Clean Power Plan to Paris this week, promoting the agency's ability to achieve greenhouse gas reductions through the rule in speeches and panel discussions at the U.N. climate conference.

This weekend, McCarthy was scheduled to deliver the keynote address in a side event co-hosted by the Edison Electric Institute about charting a low-carbon course for the U.S. power sector.

POWER PLAYS

Each Monday, **Power Plays** previews upcoming moves on the way to Clean Power Plan compliance and recaps the week's developments.

Planned speakers included executives from electric utilities Pacific Gas and Electric Co. and PNM Resources Inc., as well as the president of the Center for Climate and Energy Solutions and the executive vice president of EEI.

Today, McCarthy speaks about the Clean Power Plan alongside European Commission Environmental Commissioner Miguel Arias Cañete, and tomorrow she will discuss EPA's role in delivering on President Obama's overall climate plan.

On Wednesday, EEI and the International Emissions Trading Association co-sponsor an event to highlight how utilities might use carbon trading markets to meet CPP targets.

Officials from PG&E, Calpine Corp. and Berkshire Hathaway will participate, and EPA air chief Janet McCabe will speak.

Also Wednesday, Standard & Poor's in Paris will release a report on tools the investment community can use to manage climate risk.

On Thursday, McCarthy will speak at a side event to outline how policies in the administration's Climate Action Plan will put the country on target for 2025 greenhouse gas emissions goals.

Most of the events McCarthy attends will be live-streamed. Keep an eye out for news from E&E reporters Lisa Friedman, Jean Chemnick and Joel Kirkland, all of whom are reporting from Paris.

In the United States today, EPA general counsel Avi Garbow will keynote a conference in Las Vegas on the legal implications of new power industry regulations, particularly the Clean Power Plan. *EnergyWire*'s Ellen M. Gilmer will be reporting.

On Thursday evening, the South Carolina Department of Health and Environmental Control will host in Columbia what is billed as a public engagement session on the state energy plan and EPA's Clean Power Plan.

In other news, Colorado released a schedule of upcoming meetings on the rule. Two meetings in January will focus on the Clean Energy Incentive Program. One in February in Denver will explore compliance options, and another in March will focus on demand growth cost and reliability. The state's Air Pollution Control Division also released a summary of public comments received so far and a plan development timeline.

The Kansas Corporation Commission began soliciting public comments on the CPP last week. Read more on that below.

In case you missed it:

- Pennsylvania environment chief John Quigley aims to be among first states to comply with Clean Power Plan (*ClimateWire*, Dec. 4).
- Kansas utility regulators ordered a probe of the rule and will examine options to redispatch power (*EnergyWire*, Dec. 4).
- EPA warned a federal court against granting a stay of the greenhouse gas rules and argued industry and opposing states face no irreparable harm (*E&ENews PM*, Dec. 3).
- Missouri's air regulator is nearly certain the state will favor a mass-based compliance strategy preferred by state's electric generators (*EnergyWire*, Dec. 3).
- FERC's Tony Clark says some states will be challenged to build new pipelines and transmission lines in time to comply with Clean Power Plan (*Greenwire*, Dec. 1).
- Experts say accurate estimates of Clean Power Plan costs won't be possible for years (*EnergyWire*, Nov. 30).

Boosting Pledges, McCarthy Says Utility Support Ensures ESPS Will 'Stick'

PARIS – EPA Administrator Gina McCarthy is highlighting the power sector's view that it can comply with the agency's landmark greenhouse gas rules for existing power plants as proof that the rule will "stick," while also seeking to reassure other countries at United Nations climate talks here that GOP attempts to block the rule ultimately will fail.

News Briefs

EPA Urged To Extend Climate ESPS FIP Comment Deadline

Utility groups and state regulators are asking EPA to extend the comment period for its proposed federal plan for implementing its greenhouse gas rule for existing power plants in noncompliant states, as well as the informal comment period for the agency's Clean Energy Incentive Program (CEIP), which they argue should also be housed under the regulatory docket.

EDF Methane Measurements Could Inform EPA Rules

A new Environmental Defense Fund (EDF) paper published Dec. 7 in the *Proceedings of the National Academy of Sciences* that reports findings from a series of methane measurement studies in Texas' Barnett Shale could inform EPA's pending first-time emissions standards for the oil and gas sector's methane releases.

AIR POLLUTION:

Conservative judge predicts court battle over EPA 'co-benefits'

Robin Bravender, E&E reporter

Published: Monday, December 7, 2015

As opponents sparred in court last week over the fate of a major U.S. EPA rule to slash mercury emissions, a federal judge forecast that the next big fight over the rule will center on how the agency measures so-called co-benefits.

The U.S. Court of Appeals for the District of Columbia Circuit is grappling with how to handle EPA's standards to cut power plants' emissions of mercury and other hazardous pollutants after the Supreme Court earlier this year ruled that the agency had failed to properly consider costs before it issued the rule.

During oral arguments before the appeals court Friday, Republican-appointed Judge Brett Kavanaugh pointed to concerns raised by Supreme Court Chief Justice John Roberts with EPA's practice of counting health "co-benefits" in justifying the economic impacts of its clean air rules. Those are health benefits not directly attributable to reductions in mercury.

"He referred to that as an end-run and bootstrapping and disproportionate," Kavanaugh said of Roberts' comments. "I assume that's going to be the key battleground six months, a year from now, will be whether co-benefits are properly part of the analysis or not."

Kavanaugh and two of his Democratic-appointed colleagues are now weighing a request from industry and states to vacate EPA's rule while the agency brings it in line with the Supreme Court's ruling. But the three-judge panel on Friday appeared reluctant to gut the rule, in part because much of the industry has already made investments to comply with the standards and because EPA appears poised to reissue the same standards with revised considerations of costs (*Greenwire*, Dec. 4).

The agency has committed to fully addressing the high court's concerns by April 15, and EPA issued a proposed finding last month concluding that the benefits of its mercury standards justified the costs of the rule.

If the court agrees to keep the rule in place while EPA tweaks its finding, states and industry could return to court to challenge that finding. Kavanaugh and others have predicted that EPA's assessment of co-benefits will be a key part of their arguments.

"I think there is a pretty good chance that that will be front and center if there is a challenge" to EPA's finding that it is appropriate and necessary to regulate power plants' mercury emissions, said Jeff Holmstead, an industry attorney at Bracewell & Giuliani LLP who served as EPA's air chief during the George W. Bush administration. "A lot of people, including me, have been

pretty critical of EPA relying on co-benefits to justify pretty much everything, including the Clean Power Plan."

The Clean Power Plan aims to slash greenhouse gas emissions from existing power plants. EPA has predicted the rule will lead to big cuts in soot and smog, curbing emissions of sulfur dioxide, nitrogen oxides and particulates along with reducing heat-trapping carbon dioxide. Industry contends that EPA's reliance on co-benefits double-counts health benefits for reductions of pollutants that aren't the regulation's focus.

Whether the co-benefits issue comes up in the mercury case or elsewhere, Holmstead said, "I think it will find its way into the courts."

EPA's analysis of the mercury rule found that it would cost industry $9.6 billion a year, while overall benefits would tally as much as $90 billion annually. Of those total benefits, up to $6 million would come from reduced mercury pollution. Most of the rest of the monetary benefits would stem from reductions in particulate matter, a pollutant that is not a target of the mercury rule.

During oral arguments in March, Roberts grilled the Obama administration's solicitor general, Donald Verrilli, about the analysis, suggesting EPA was using the mercury rule to get reductions in particulate matter that it wouldn't be able to otherwise under the Clean Air Act.

"It's a good thing if your regulation also benefits in other ways," Roberts said. "But when it's such a disproportion, you begin to wonder whether it's an illegitimate way of avoiding the different -- quite different limitations on EPA that apply in the criteria program."

Earthjustice attorney Jim Pew said EPA "doesn't have to consider benefits at all to satisfy the Supreme Court decision," and said industry challenges to the agency's calculations of co-benefits are "extraordinarily disingenuous."

John Walke, an attorney at the Natural Resources Defense Council, said Kavanaugh's comments Friday "could be him signaling reservations about EPA's co-benefits." But more likely, he said, it "reflects that industry has been raising that issue from day one."

Kavanaugh was the lone judge to dissent in the appeals court's divided ruling last year that upheld EPA's mercury rule before the high court shot it down.

But while Kavanaugh "has shown himself skeptical of EPA's position in this rulemaking and other rulemakings," Walke said, his "remarks from the bench won't influence what industry will do at all because they have already been doing what he is forecasting."

PARIS TALKS:

U.S., E.U. press other wealthy countries to pay their share

Lisa Friedman, E&E reporter

Published: Monday, December 7, 2015

LE BOURGET, France -- Should Qatar, the richest country in the world, help poorer nations deal with climate change? What about Singapore, the third-richest, where the gross domestic product per capita is five times higher than in Bulgaria? Or Saudi Arabia, where the average

household income is higher than that of Italy, Spain and the Czech Republic?

The United States, the European Union and a growing number of vulnerable countries say yes. They are working to design language in a new climate agreement here that would upend the current structure that demands only the industrialized countries as designed in 1992 pay up.

The move is coming under fierce attack by the Group of 77 (G-77), which represents developing countries. U.S. Special Envoy for Climate Change Todd Stern today argued, though, that the poorest and most threatened by climate change should welcome the efforts.

SPECIAL SERIES

<image006.jpg>

Paris Climate Talks provides in-depth coverage of the 21st U.N. summit to forge a new global agreement to reduce carbon dioxide emissions. Visit the special report.

"I think countries like the islands and the least developed countries are enthusiastically supportive. I'm not entirely sure what they do or they don't say in the councils of the G-77," he said. "What we're talking about here is to create a larger pool of funds."

At the moment, the debate is down to a battle of words. Europe wants language in a burgeoning deal to call for all countries "in a position to do so" to deliver money. Another wording option -- reportedly preferred by China -- is to ask that countries "willing to do so" write the checks.

Europeans, meanwhile argued the phrase "willing" is too wishy-washy. "Come on, seriously," one negotiator said. "Countries like Singapore and South Korea and Bahrain? They're richer than us. How come they can't contribute?"

The answer -- like so many things in these negotiations -- lies in the age-old divisions between rich and poor nations, and the fraught nature of trying to shift those roles. Even some very poor countries like Sudan say they recognize that more countries might deliver more money in a new system but continue to argue to protect the wealthier nations in their bloc.

"Let first those who are committed, let them stick to their promises. If they are not giving, how do you expect others to give?" said Muawia Shaddad, a professor at the University of Khartoum and a member of the Pan African Climate Justice Alliance.

Ambassador Joyce Mxakato-Diseko, a South African diplomat who is chairing the G-77, complained last week that there are no criteria for countries "in a position to do so" and accused wealthy nations of trying to wriggle out of their 2009 pledge to mobilize $100 billion annually by 2020.

<image007.jpg>

Saudi Arabian Minister of Petroleum Ali bin Ibrahim Al-Naimi holds a meeting on the sidelines of U.N. climate talks. His country is being asked to shoulder a greater share of the burden of helping poorer nations grapple with climate change. Photo by Lisa Friedman.

"In my family, I tell my children, 'You will clean your room.' I do not say that someone will clean the room. I say, 'You, John, will clean the room.' I say, 'You, Grace, will do the dishes.' There is

no someone 'in a position to do so' will wipe the floor," Diseko said. "I need accountability, I really do need accountability. I need to know above all that the floor has been cleaned."

Meanwhile, activists who work on finance issues say they are largely in favor of efforts to expand the base of donors -- though many of them called for some set of criteria to delineate what countries do and don't have the capacity to deliver. Stern today said that's unlikely to happen.

"We think that the principle that is driving this agreement, I hope in a direction that will be successful in the end, is the notion that countries are in many respects nationally determining," he said. "The world buy-in ... is based on the notion that countries are able to make their own decisions, and I think we're going to stick with that," he said.

On the one hand, putting such language in the agreement would reflect a reality that's already happening. China has pledged $3.1 billion, more than the United States, to poor nations through a South-South Cooperation Fund, while developing countries ranging from Indonesia to Mongolia have put money toward the Green Climate Fund.

Heather Coleman of Oxfam America said making it official in legal text is "important to send a signal that countries will continue to provide finance." At the same time, she noted, many nations are fearful that allowing language in a legal text will obligate them to deliver.

"There are some developing countries that definitely need to pony up," she said. "It's clear that countries like Singapore, countries like Qatar should be on the hook."

Meanwhile, she said, "A country like India should not be obligated to put forward finance but certainly should be encouraged to do something."

Developing nations are asking the United States and other wealthy countries to commit that a pledge to mobilize $100 billion annually by 2020 will materialize and expand, but complain that's being held hostage to a desire to break down barriers in the years afterward.

Stern described it as "all part of a package" but said he is confident countries will find common language. "We are open to various formulations," he said.

APPROPRIATIONS:

Jewell says Interior stands firm against omnibus riders

Phil Taylor, E&E reporter

Published: Monday, December 7, 2015

LAS VEGAS -- Interior Secretary Sally Jewell said Friday that her department is opposing all policy riders under consideration for a government spending bill that could undermine the Obama administration's lands, energy and wildlife policies, though she conceded that the negotiations are largely above her pay grade.

But Jewell said her Capitol Hill allies are playing a stout defense and that she believes the White House will reject one particular rider by Senate Energy and Natural Resources Chairwoman Lisa Murkowski (R-Alaska) to permit a road through the Izembek National Wildlife Refuge in Alaska.

"You can't start negotiating your own execution," Jewell said at the Western Governors' Association's winter meeting here last weekend, when asked about the administration's willingness to concede on some policy measures in order to pass a long-term spending measure.

Government funding authority ends Friday, but congressional aides have offered no signs of a breakthrough on either the spending measure or another must-pass bill to extend tax provisions (*E&E Daily*, Dec. 7).

"There are a lot of riders that would undo very, very important work that's been done over the years, including the work we've done on the sage grouse here, riders that would undo many years of work on stream protection in the context of mining," Jewell said. "We oppose those, and I think you'll see us staying together on that."

Yet Jewell also said she plays a relatively minor role in the spending bill negotiations between the White House and Senate and House leaders. Talks also involve non-Interior policy issues like U.S. EPA limits on global warming emissions and the ban on exporting crude oil, as well as non-environmental issues including Syrian refugees.

Jewell said candidly that she "won't be party" to the highest-level discussions. "No one's calling me and saying, 'Could you give on this or could you give on that?'" Jewell said. "We have a clear focus that we don't want any of them."

Previously proposed environmental policy riders would affect Interior's protection of imperiled wildlife, including sage grouse and gray wolves, its regulation of oil and gas drilling, and its protection of streams from coal mining waste, as well as the president's ability to set aside Interior lands for permanent protection.

Murkowski last summer included a rider in the Senate's fiscal 2016 spending bill for Interior and EPA that would approve construction of a gravel road through Izembek, which she and other Alaska officials contend is critical to the safety of residents in King Cove who lack reliable access to medical care.

Jewell rejected the road and an associated land swap offer nearly two years ago in a move that infuriated Alaskans. She said the White House understands the importance of Izembek to migratory birds and a host of other wildlife.

"There's reasons that we the taxpayer have paid almost $54 million to not build this road, and the White House is well aware of that," Jewell said. "So I believe they'll stand firm with us on that."

But the road is a top priority for Murkowski, who chairs the Appropriations Committee panel that funds Interior. "I want to figure out a way to find safe passage for the people of King Cove, and I'm going to figure it out one way or another," she said last week when asked about the rider's inclusion in an omnibus.

Environmental groups are resolutely opposed to the road. "The rider would ensure irreparable damage to an internationally treasured landscape and set a precedent that would jeopardize wildlife refuge and wilderness protections on public lands across the country," said a memo released this morning by Defenders of Wildlife.

Other environmental riders believed to be on the negotiating table would block U.S. pledges to

the Green Climate Fund and target the Clean Water Act jurisdiction rule, the stream protection rule, the White House's National Environmental Policy Act climate guidance, the social cost of carbon metric, Interior's proposal to overhaul public coal valuation, the new updated ozone standard, and the coal ash disposal rule.

Aides for House and Senate spending panels said this morning that negotiations continued through the weekend. One said an agreement is likely sometime this week.

However, it's unclear whether both sides will have language ready by today, as House Appropriations Committee Chairman Hal Rogers (R-Ky.) had hoped.

COAL:

Dems call for tougher penalties in wake of Blankenship verdict

Manuel Quiñones, E&E reporter

Published: Monday, December 7, 2015

Congressional Democrats are calling for tougher penalties for violations of federal mine safety laws in the wake of former Massey Energy Co. CEO Don Blankenship's conviction in a safety case.

A federal jury last week found Blankenship guilty of conspiring to violate mine safety standards. The misdemeanor carries up to one year in prison (*E&ENews PM*, Dec. 3).

Even though prosecutors and groups welcomed the verdict as "unprecedented," Democratic lawmakers say it's further evidence of the need for a new mine safety law.

"I am troubled that criminal behavior involving a conspiracy to commit willful violations of mandatory mine safety and health standards can only result in a mere misdemeanor penalty that cannot exceed one year in prison even when a mine operator recklessly exposes a miner to significant risk of serious injury, serious illness or death," said Virginia Rep. Bobby Scott, top Democrat on the House Education and the Workforce Committee.

Investigations into the 2010 explosion at Massey's Upper Big Branch mine in West Virginia accused Blankenship of being more focused on profits than on safety.

"A misdemeanor sanction is a woefully insufficient deterrent for criminal conduct for an operator who repeatedly puts production ahead of safety requirements," Scott said Friday.

Democratic legislation, H.R. 1926, would impose a felony penalty, up to five years in prison and up to $1 million in fines for operators that jeopardize the lives of workers.

Mining companies and many of their allies on Capitol Hill, particularly on the Republican side, have rejected the need for new legislation. Rather, they say regulators should better use the tools already at their disposal.

The National Mining Association has also been touting its own mine safety initiative and is calling on regulators to take a more cooperative approach to enforcement.

CAMPAIGN 2016:

Sanders climate plan seeks drastic emissions reductions

Jennifer Yachnin, E&E reporter

Published: Monday, December 7, 2015

Vermont Sen. Bernie Sanders (I) today unveiled an aggressive climate change platform, vowing to enact a carbon tax in an effort to reduce greenhouse gas emissions by 80 percent by 2050, as well as pledging to "ban fossil fuels lobbyists from working in the White House" if elected.

In an expansive proposal posted to his campaign website, Sanders -- who is competing for the Democratic presidential nomination against former Secretary of State Hillary Clinton and former Maryland Gov. Martin O'Malley -- echoed his prior criticisms of the fossil fuel industry, as well as his desire to make significant federal investments in both energy efficiency and renewable resources including wind and solar power.

"Right now, we have an energy policy that is rigged to boost the profits of big oil companies like Exxon, BP, and Shell at the expense of average Americans. CEO's are raking in record profits while climate change ravages our planet and our people -- all because the wealthiest industry in the history of our planet has bribed politicians into complacency in the face of climate changes," Sanders said in a statement. "Enough is enough. It's time for a political revolution that takes on the fossil fuel billionaires, accelerates our transition to clean energy, and finally puts people before the profits of polluters."

In his plan, Sanders called for a carbon tax, an idea that has gained little traction in a Republican-controlled Congress, in an effort to cut pollution by 40 percent by 2030 and by more than 80 percent by 2050.

"Bernie will tax polluters causing the climate crisis, and return billions of dollars to working families to ensure the fossil fuel companies don't subject us to unfair rate hikes," Sanders' website states. "The carbon tax will also protect those most impacted by the transformation of our energy system and protect the most vulnerable communities in the country suffering the ravages of climate change."

A Sanders administration would also look to rein in tax benefits to the fossil fuel industry, as well as banning any oil or gas lobbyists from holding future jobs in the White House.

"Massive lobbying and unlimited Super PAC donations by the fossil fuel industry gives these profitable companies disproportionate influence on our elected leader. This practice is business as usual in Washington and it is not acceptable," Sanders said. The senator's plan also cites his support for efforts to undo recent Supreme Court decisions that gave rise to significant spending by third-party groups, as well as supporting public financing of federal elections.

Sanders likewise echoed his support for a federal investigation into whether Exxon Mobil Corp. misled the public about climate change for almost four decades, vowing to "bring climate deniers to justice so we can aggressively tackle climate change."

The senator called for a Justice Department inquiry following reports from *InsideClimate News* and a collaboration between the *Los Angeles Times* and the Columbia University Graduate School of Journalism that found Exxon discovered the threat of climate change almost 40 years ago but paid millions of dollars to keep the issue out of the public eye (*ClimateWire*, Oct. 28). Exxon has since pushed back on the validity of the reporting.

"It is an embarrassment that Republican politicians, with few exceptions, refuse to even recognize the reality of climate change, let alone are prepared to do anything about it," Sanders said.

Moratorium on nuclear

In addition, Sanders' plan focuses on making new investments in solar and wind power energy production. He said the administration would create 10 million new energy-related jobs by establishing a "100 percent clean energy system."

His proposal would also seek to curtail the use of nuclear energy, and includes a moratorium on nuclear power plant license renewals in the United States.

"Bernie believes that solar, wind, geothermal power, and energy efficiency are proven and more cost-effective than nuclear plants -- even without tax incentives -- and that the toxic waste byproducts of nuclear plants are not worth the risks of the technology's benefit," Sanders' website states.

The senator similarly vowed to ban offshore drilling, drilling in the Arctic Ocean and mountaintop coal mining.

Sanders also pledged to seek an increase in fuel economy standards, boosting requirements to 65 mpg by 2025, an increase over the current goal of 54.5 mpg by that time.

The proposals garnered immediate praise from environmentalists, including those at the Sierra Club and NextGen Climate, who have yet to endorse in the Democratic primary.

"We commend Senator Sanders for proposing this ambitious energy plan. These proposals are rooted in a clear recognition of the fact that the top priorities for a responsible energy policy are cutting dangerous carbon pollution as fast as possible, and providing even further momentum for the booming clean energy economy," Sierra Club Executive Director Michael Brune said in a statement. "We can't afford to wait a minute longer to tackle the climate crisis, or to ensure that all American families have clean air to [breathe] and clean water to drink."

But American Petroleum Institute spokesman Reid Porter dismissed Sanders' plan in a statement to *Greenwire*, asserting the senator's proposals are peppered with "false choices."

"The United States is the global leader in oil and natural gas production. We are creating millions of jobs, generating billions in revenue for the government, and we are leading the world in reducing carbon emissions. We are second to no one. Denial of this reality is preposterous, and it does a disservice to our nation's pursuit of long-term energy security and to the thousands of families who rely on affordable and reliable energy," Porter said. "It's not a matter of whether we need oil and natural gas to fuel our economy, but where will we get it. We will either continue to rely on energy from less stable parts of the world or we can focus on the developing America's abundant resources right here at home."

POLITICS:

Obama's Cabinet orchestrates sales pitch for Clean Power Plan

Jean Chemnick and Joel Kirkland, E&E reporters

Published: Monday, December 7, 2015

LE BOURGET, France -- President Obama's top advisers have arrived in force here today to begin a final push toward a global climate accord, vowing that U.S. carbon reductions are here to stay.

U.S. EPA Administrator Gina McCarthy, Energy Secretary Ernest Moniz and Secretary of State John Kerry are among the administration officials who have joined 40,000 national delegates, global warming activists and journalists gathering in this Paris suburb. Agriculture Secretary Tom Vilsack and Interior Secretary Sally Jewell participated in the first week of the U.N. summit but have since departed.

The administration's collective task is to convince a skeptical world that Obama's Climate Action Plan will survive his presidency, and it has them singing from the same hymnal.

SPECIAL SERIES

Paris Climate Talks provides in-depth coverage of the 21st U.N. summit to forge a new global agreement to reduce carbon dioxide emissions. Visit the special report.

In an interview with *Greenwire*, McCarthy said interagency cooperation was strong in the run-up to the conference because securing an agreement is such a vital part of Obama's legacy.

"It has been incredibly seamless in terms of both planning for this event and working it through," she said. "We have coordinated doing energy Cabinet meetings totally focused across the administration on Paris."

Agencies have held a morning phone call in the lead-up to the conference to make sure they're all on the same page, and the White House has been offering guidance. "Our communications people talk to each other," McCarthy said.

McCarthy and Moniz took the same United Airlines flight Friday night, as did White House Council on Environmental Quality chief Christy Goldfuss. After landing at Charles de Gaulle Airport on Saturday morning, they made their first appearances jointly later that day, where the Cabinet members pledged the United States would make good on its commitments to cut greenhouse gas emissions.

McCarthy and Moniz told their international audience that federal carbon regulations are legally enforceable, even if Congress isn't happy with the policy and a hostile Republican president is elected in 2016.

"We have political realities in terms of how we can move forward," Moniz said today. "The

president made clear -- and I think it's very important -- that ultimately we do eventually have [to have] legislation that provides an economywide approach. But in the meantime, we will emphasize executive authorities that already exist for meeting our ambitious targets."

EPA's Clean Power Plan rule to cut emissions across the electricity sector is a core policy component supporting the U.S. commitment ahead of the Paris talks to reduce emissions at least 26 percent below 2005 levels by 2025. The U.N. climate summit, led by France, is pressing for an agreement by the end of this week.

"This rule is going to stand the test of time," McCarthy said, referring to the Clean Power Plan regulations. "This rule, despite what one might read, is being actively engaged in by every state in the United States."

McCarthy and her air policy chief, Janet McCabe, who is also in Paris, have been the administration's top salespeople on climate rules for the past two years, after Obama directed the agency to get moving on power-sector regulations. As the talks enter their critical second week, McCarthy said one of her roles will be to meet with delegations and answer questions about her agency's flagship climate policy.

The power-sector regulation faces stiff opposition from Republican-led states in the South and other coal-dependent states. There are court challenges and vows to overturn the rule from nearly every candidate for the Republican presidential nomination.

But McCarthy, McCabe, White House senior climate and energy adviser Brian Deese, Senate Democrats and even some friendly electric utilities are trying to beat back any narrative that the United States might ultimately default on its climate commitments, walking away from a Paris deal as it did from the Kyoto Protocol.

McCarthy has been meeting with counterparts from other countries since the Clean Power Plan was first proposed in 2014, and many of the heads of delegation here in Le Bourget are now acquaintances.

"We have had a steady stream of countries coming in asking to understand it, is it going to last, what are all these lawsuits, what is Congress doing?" she said. She said the international community generally accepts that the rule is likely to withstand the coming challenges.

"EPA is recognized for its technological expertise in this area, as well as how well we do defending the Clean Air act and our actions," she said.

The White House has engaged extensively with China and India, the world's first- and fourth-largest carbon emitters, in hopes of paving the way for a climate deal. For that, it had to convince leaders of both countries that the U.S. economy will adopt carbon controls.

It's trying to shift discussions to the U.S. priorities for a final agreement, including establishing a five-year review period and an accountability system for checking nations' progress on cutting emissions.

Taking the stage in a grand hall inside the 19th-century Petit Palais art museum, before loud applause from global warming activists, Kerry hammered home the U.S. position that both industrialized and rich developing nations such as China and South Korea are equally responsible for slashing greenhouse gas emissions.

"We feel very strongly in the United States that in 2015, it is time to get rid of this rigid differentiation between developed and developing," Kerry said.

"It does no good to come to Paris and have a great big meeting and get out of here and say 'there are a lot of goals' if they're not being implemented and you're not moving down the road."

Kerry spoke about the need for the largest-emitting nations to play an active role in cutting emissions. The issue about "differentiation" is a critical paradigm shift for the U.N.-sponsored talks. China, India, Brazil and other big developing countries for the past two decades have insisted on being treated differently. That was put into place in the 1990s as the path forward.

Also today, former California Gov. Arnold Schwarzenegger (R) made a rousing speech before the plenary of international delegates. Meanwhile, back in a decked-out museum in central Paris, California's current governor, Jerry Brown (D), and energy-sector CEOs rallied activists.

'U.S. has taken clear action'

Any hope of Congress forging a political consensus around carbon came to a screeching halt after Obama returned from the last major U.N. climate summit in 2009. In 2010, the Senate let a House-passed carbon cap-and-trade bill die.

That history -- and the long memories of delegates who recall Senate Republicans' refusal to ratify the Kyoto accord in 1997 -- is some of the context around the administration's presence here.

"The U.S. has taken clear action," said McCabe, EPA's assistant administrator for air and radiation. "It's important that people see the United States has done that."

In a panel discussion sponsored by the Edison Electric Institute, PG&E Corp. CEO Anthony Earley said cutting U.S. emissions will rely on electric utilities and states driving toward the Clean Power Plan's target: cutting power emissions 32 percent below 2005 levels by 2030.

"From a deployment standpoint, we've shown that utilities are really the perfect organizations to leverage the scale we have in accelerating the transformation of the system."

And Earley leaned on the notion that utilities -- under some pressure from rooftop solar companies and other distributed generators -- are still the backbone of the system, warning that policymakers shouldn't "take it for granted."

The cost of implementing changes is "manageable," he asserted.

Multiple threads of discussion around deployment of energy technology are going on across Paris. And leaders here say "signals" are needed for the private sector to start spending billions on energy technology needed by India and other large developing countries.

Microsoft co-founder Bill Gates partnered with Moniz and the White House on a public-private partnership deal designed to raise billions of dollars through 2020. It would couple billions of dollars in investment from the wealthiest people in the world with a doubling of research and development spending by 20 nations. Under the plan, U.S. R&D spending on cleaner forms of energy technology would go from about $2 billion to $5 billion.

On a separate track is a call for $100 billion in financing for poor and developing countries to deploy new technology and protect themselves from the worst effects of global warming.

As this is happening, the small cadre of U.S. utility officials -- mostly sustainability officers -- is talking about Clean Power Plan implementation.

In California, deploying massive amounts of solar and wind power could eventually require a regional Western market, Earley told *Greenwire*.

"We need to create regional electricity markets," he said. "The hallmark of renewables is that they're unpredictable; we don't control them. If you have a regional market, we'll be better able to trade this clean energy."

NOTEBOOK:

Mayors wine, dine with movie stars

Lisa Friedman, Jean Chemnick and Katie Howell, E&E reporters

Published: Monday, December 7, 2015

LE BOURGET, France -- As haggard negotiators struggle to eke out a climate deal in the industrial northern suburbs of Paris, 450 mayors from around the world have been wining and dining with movie stars and ambassadors across the capital city and patting themselves on the back for doing more than the most progressive national governments could hope to achieve.

The U.S. Conference of Mayors, which sent a delegation to Paris for the climate summit, today unveiled a new report that touts the efforts of U.S. mayors as leaders on climate over the last 10 years.

SPECIAL SERIES

<image006.jpg>

Paris Climate Talks provides in-depth coverage of the 21st U.N. summit to forge a new global agreement to reduce carbon dioxide emissions. Visit the special report.

"USA mayors and others throughout the world continue to lead and show that local climate action is meaningful and making a difference in curbing harmful carbon emissions," Baltimore Mayor Stephanie Rawlings-Blake, who is also president of the group, said at an event today at the residence of U.S. Ambassador to France Jane Hartley. "A number of my mayoral colleagues are already in their second decade of climate leadership. This serves as a reminder that a big part of our success in protecting our planet will turn on how well we support and accelerate local level climate action throughout the world."

The mayors on Friday met at Paris' opulent Hôtel de Ville, where they sipped fine French wine, heard from movie stars Leonardo DiCaprio and Robert Redford, and adopted the Paris City Hall Declaration, which restates local efforts to fight climate change and calls for national negotiators at the climate summit to do the same.

"Mayors are a powerful group. You are the catalysts. Be bold, be courageous -- the world is watching you," DiCaprio told the mayors Friday, according to the London *Guardian*.

Inslee, Brown knock 'knucklehead' Republicans

Governors, too, are touting their efforts to take subnational action on climate change. Govs. Jerry Brown of California and Jay Inslee of Washington, both Democrats, have advanced statewide emissions-reduction policies. And they took aim at Republicans for their continued opposition to climate action and science.

"America is really divided," Brown told an international audience in Paris this weekend. But he said that brokering an agreement would help underline how out of step U.S. Republicans are.

"Signing a good agreement will help us overcome what I call the mindless opposition, because there are a lot of people here who are not on the left who will be signing this agreement," Brown said. "And I think that idea will get through to these knuckleheads."

Inslee, who served in the House before becoming Washington's governor, said that pricing carbon would help facilitate "the green energy transition."

"On the West Coast, we live on innovation, it's our stock and trade," Inslee said. "It's what we sell as intellectual capital."

Washington state also has "knuckleheads," he said, like the state legislators who blocked his proposal to tax carbon. He now plans to use existing legal authority to cap emissions.

The two governors shared the stage with the mayors of Oakland, Calif., and Vancouver, Wash., and the environment minister of British Columbia.

China will honor its financial pledge

China will make good on its financial commitment on climate change, even if the United States doesn't, the Chinese head of delegation Su Wei told E&E.

<image008.jpg>

China's head of delegation, Su Wei (left) speaking through an interpreter at the U.N. climate conference. Photo by Lisa Friedman.

Asked to comment on the U.S. Congress' insistence that the $3 billion pledge over four years that President Obama made to the Green Climate Fund will never see the light of day, Su said it would be "most unfortunate" if the money were blocked.

"It would not be positive to the atmosphere in Paris, and every leader is determined to make Paris a successful conference," he said. "The financial issue is one of the key issues that needs to be settled here in Paris.

"Having said that, China's contribution to the South-South Cooperation Fund is not dependent on what developed country parties make," he said. No matter what happens, that $3.1 billion pledge "would remain as it is now."

Inside the E.U.'s secret meeting room

Isaac Valero-Ladron, a senior adviser to the European Union's energy commissioner, gave E&E a sneak peak at the bloc's coordination room over the weekend to offer a sense of how

challenging it is to develop a common position.

<image009.jpg>

E.U. negotiators meet daily in this conference room to hash out agreements. Photo by Lisa Friedman.

Each morning, lead negotiators from the 28 member nations meet in the vast conference room in the European pavilion for an hour and a half, often going paragraph by paragraph through the text.

That's only the beginning of several such meetings throughout the day. What solar-loving Germany can live with on calls for decarbonization, or a 1.5-degree temperature-rise goal, for example, might be very different than that of coal-hungry Poland.

"We are not a country. We are 28 countries," Valero-Ladron said.

Overflow delegates bring flair to drab meeting rooms

Dark suits are de rigueur at the conference complex where negotiations are underway, but every now and then a splash of color can be seen -- typically around the Brazil delegation's headquarters.

Brazilian activist Jose de Lima Kaxinawa, a member of a tribe that lives in the Amazon rainforest of Brazil and Peru, is one of hundreds of "party overflow members" at the climate talks.

Brazil applies a unique open-door policy that allows anyone to join the government's delegation to the talks if they pay their own way. The nation has 800 delegates -- by far the largest number of overflow members, who wear purple stickers that indicate they can be asked to leave meetings when there isn't enough room.

The United States and China also have large representations, but they don't dress as vibrantly.

De Lima Kaxinawa has been wearing a flashy orange, yellow and red headdress and a colorful robe, according to Reuters.

Other Brazilian campaigners wear traditional dress or casual clothes. Francinara Soares Martins had on bone earrings and brightly colored feathers yesterday while handing out deforestation posters.

"We are very inclusive," Luiz Alberto Figueiredo Machado, a former Brazilian foreign minister, told Reuters of the overflow member policy.

Perhaps they should have taken the Chunnel

Green groups are blasting British leaders and negotiators for flying to the Paris negotiations.

Friends of the Earth called out Prime Minister David Cameron and International Development Secretary Justine Greening and her team for flying to the COP 21 talks last week.

The return flight from London's Heathrow airport to Paris' Charles de Gaulle emits 122 kilograms of carbon dioxide per person, according to Eurostar. By comparison, a train trip

would emit 10.9 kilograms per person, Eurostar said.

"It's perfectly easy to understand that many people will find British ministers flying to a climate conference to be hypocritical," said Craig Bennett of Friends of the Earth, according to the London *Guardian*.

Pope prays for the negotiations

Pope Francis yesterday prayed for the success of the Paris negotiations.

"For the sake of the common home we share and for future generations, every efforts should be made in Paris to mitigate the impact of climate change and, at the same time, to tackle poverty and to let human dignity flourish," Francis said from the Vatican, according to Vatican radio and reported by *USA Today*.

NEGOTIATIONS:

Russia won't block a climate deal -- Putin

Published: Monday, December 7, 2015

Russian President Vladimir Putin has signaled that his negotiators will not block an agreement backed by other major countries at the U.N. climate change conference underway in Paris.

Though Russia has been a major player in global climate talks since 1992, Putin has not put much priority on environmental initiatives and has expressed skepticism about climate change (*ClimateWire*, Aug. 25, 2010).

According to Paris conference participants, however, Putin had assured German Chancellor Angela Merkel that he would not sink a deal. Russia has met with criticism for submitting an emissions goal that it has essentially already met, requiring few changes to its economy (*ClimateWire*, April 6).

Russia also stands to gain from any shift to cleaner-burning natural gas, as it has some of the largest reserves in the world (Harvey/Taylor, London *Guardian*, Dec. 7). **-- BTP**

PEOPLE:

France's top climate diplomat wears host hat, too

Published: Monday, December 7, 2015

France's top climate change negotiator must not only help work out a deal in her country's interests at the climate change conference currently underway outside of Paris, but also play the role of organized host to 196 delegations and a bevy of other attendees.

From installing lighting in each workspace that is soft and comforting to ensuring that the conference's cuisine befits France's culinary reputation to acting as a mediator between disagreeing sides over a deal, Laurence Tubiana has had a lot on her mind these past 18 months.

"This is an incredibly hard job, and she doesn't come to the job as a deeply seasoned professional diplomat," U.S. senior climate envoy Todd Stern said of Tubiana. "But using her think tank background, and the signature French Embassy events -- it all affects the larger buy-in to Paris."

Tubiana has indeed drawn on France's elegant embassies worldwide to host events and dinners with key political and business leaders and journalists to make sure everyone is on the same page (*ClimateWire*, Dec. 7). She has worked to avoid a repeat of the 2009 climate conference in Copenhagen, Denmark, where many blamed the Danish government's poor organization and lack of openness for helping sink the talks.

"Climate change is about ecosystems," Tubiana said. "Climate change negotiations are about ego-systems" (Coral Davenport, *New York Times*, Dec. 6). **-- BTP**

ENERGY EFFICIENCY:

Nations, Ikea plan looks to screw in 10B LED bulbs

Published: Monday, December 7, 2015

As a way to ratchet down the 5 percent of global emissions caused by lighting, governments such as China, India and the United States and large companies such as Ikea have pledged to fit 10 billion ultra-efficient lightbulbs worldwide.

India and China have said they will increase production and sale of light-emitting diodes, or LEDs, and Ikea, the Swedish furniture multinational, said it will stock its shelves with more energy-efficient bulbs to sell to its customers.

Pollution emitted from lighting sources makes up 15 percent of the world's electricity consumption. An overnight transition to LED lights could save approximately 735 million metric tons of emissions, or enough to displace around 250 coal-fired power plants.

"If we have 20 years of the global carbon budget left, we need to create products that are fantastically energy-efficient and roll them out to scale very fast," said Steve Howard, Ikea's chief sustainability officer (Arthur Neslen, London *Guardian*, Dec. 7). **-- AK**

SUPREME COURT:

Justices reject challenge to Colo. renewable standard

Robin Bravender, E&E reporter

Published: Monday, December 7, 2015

The Supreme Court today refused to hear an appeal in a case challenging Colorado's renewable energy standard.

In a short order issued this morning, the high court rejected a request by the anti-regulatory nonprofit Energy & Environment Legal Institute challenging Colorado's requirement that 20 percent of all electricity sold in the state come from renewable sources.

Lawyers for the nonprofit argued that the standard illegally regulated economic activity beyond the state line, and they asked the justices to take on the issue after a three-judge panel on the Denver-based 10th U.S. Circuit Court of Appeals unanimously upheld the standard earlier this year (*Greenwire*, Oct. 16).

David Schnare, an attorney representing the Energy & Environment Legal Institute in the case, said today that petitioners may ask the justices to reconsider their refusal to hear an appeal in the case, *Energy & Environment Legal Institute v. Joshua Epel*. Schnare said he believes the ruling from the 10th Circuit conflicts with another ruling from the San Francisco-based 9th U.S. Circuit Court of Appeals in the case *Sam Francis Foundation v. Christies Inc.*, regarding whether a California law regulating art sales violates the dormant Commerce Clause, which bars states from discriminating against interstate commerce.

"The major reason that they take these kinds of cases is to cure circuit splits," Schnare said.

Michael Freeman, a Colorado-based attorney at Earthjustice representing environmentalists in the case, said today that the "argument that there's a flaw in the 10th Circuit ruling is meritless." He added, "the courts have consistently rejected the theory" asserted by the Energy & Environment Legal Institute "that incidental impacts on commerce" somehow violate the dormant Commerce Clause.

No word on high-stakes water cases

Supreme Court watchers were waiting for news today about whether the justices would agree to hear pending wetlands cases, but the court has punted on making that decision.

The justices are weighing whether to hear two cases regarding whether courts can review federal regulators' determinations about which areas are subject to Clean Water Act protections. The Obama administration and property rights advocates have asked the high court to weigh in on the issue after lower courts have offered conflicting opinions. Many court watchers predict that the justices will agree to hear at least one of the cases (*Greenwire*, Oct. 30).

The justices are now expected to consider whether to take the cases, *U.S. Army Corps of Engineers v. Hawkes Co. Inc.* and *Kent Recycling Services LLC v. U.S. Army Corps of Engineers*, at their conference this Friday and may announce their decision later this week or early next week.

SCIENCE:

Climate change may not have driven Vikings from Greenland

Published: Monday, December 7, 2015

For nearly five centuries, thousands of Vikings eked out a living on Greenland's harsh shores before unexpectedly departing in the mid-15th century. Until now, their disappearance has often been explained as a result of changing climate, but new research is raising doubts on that theory.

Norse settlement of Greenland occurred soon after the start of the "Medieval Warm Period," a 300-year period of more temperate climates in most parts of the world that was followed by the "Little Ice Age," which made weather harsher. A study published last week in *Science*

Advances asserts that the changing climate was not likely a big factor in the Vikings' retreat from Greenland, since the region's glaciers appear to have been nearly as large during the Medieval Warm Period as they were during the Little Ice Age.

"This study suggests that while the Vikings may have left Iceland when it was relatively warm, they arrived in the Baffin Bay region, and it was relatively cool," said lead author Nicolás Young, a professor at Columbia University's Lamont-Doherty Earth Observatory. "So for their initial settlement, and the first few centuries when they were there, they persisted and thrived somewhat during a relatively cool climate. And so it's sort of a stretch to say that a cool climate is what drove them out of the region, when they demonstrated that they could be somewhat successful during a cool climate."

The scientists were able to measure the extent of the glaciers over time from their impressions left in the earth and could date the soil and rocks left behind as they retreated.

"There's certainly strong evidence in Europe that that was a real thing," said Young of the Medieval Warm Period. "But it's certainly not a global event; it was patchy, with quite a bit of variability" (Chris Mooney, *Washington Post*, Dec. 4). **-- BTP**

BUSINESS:

Food giants have bigger carbon footprint than some countries

Published: Monday, December 7, 2015

Global food production companies such as Cargill Inc., Tyson Foods Inc. and Yara International ASA have larger carbon footprints than many countries, including the Netherlands, Vietnam or Colombia, a new analysis shows.

The realization from Global Justice Now highlights the role the agri-food sector plays in climate change, which contributes as much as 29 percent of global emissions, although the industry has received far less attention than the energy industry in the past.

Moreover, the amount of emissions that agriculture businesses report is said to be only a fraction of actual pollutants the companies release, resulting in millions of metric tons of pollution that has been kept from the public.

According to Global Justice Now's new findings, U.S. animal feed manufacturer Cargill, for example, reports annual emissions of 15 million metric tons, but if it included growing feed crops, the number would spike to some 145 million metric tons.

Tyson, the largest beef producer in the United States, says it emits 5 million metric tons but does not include keeping livestock in that number, which would increase the amount to 34 million metric tons. Yara, one of the world's largest fertilizer producers, emits nearly 12.5 million metric tons but does not take into account its use of fertilizers, boosting that number to 75 million metric tons.

"They shouldn't be able to indulge themselves in the fiction that they are not culpable for these indirect climate impacts," said Alex Scrivener, policy officer at Global Justice Now and co-author of the analysis (Tom Levitt, London *Guardian*, Dec. 7). **-- AK**

FEDERAL AGENCIES:

Government power consumption hits new low

Hannah Hess, E&E reporter

Published: Monday, December 7, 2015

The U.S. government, one of the largest energy consumers in the world, cut its fuel use to the lowest levels in the past 40 years, according to an U.S. Energy Information Administration analysis released today.

The decline indicates progress on President Obama's plan to reduce the greenhouse gas emissions of federal agencies and make federal buildings more efficient, EIA noted, with a decline in jet fuel consumption by the Defense Department accounting for the biggest change (*Greenwire*, Nov. 23, 2015).

As part of the plan, the White House aims to reduce per-mile greenhouse gas emissions from agency fleet vehicles by 30 percent over the next decade. Over the previous five fiscal years, greenhouse gas emissions from the federal fleet have fallen by a total of 3 percent, EIA said.

Data from the Department of Energy's Federal Energy Management Program show energy usage in fiscal 2014 -- 0.94 quadrillion British thermal units -- declined to the lowest level since the government started monitoring consumption in 1975. Energy bills totaled $23.1 billion, falling from $24 billion in 2013 (*Greenwire*, Feb. 4).

Vehicles and equipment energy usage accounted for 61 percent of all federal energy consumed, with the remainder consumed by facilities. Energy consumption by DOD made up 78 percent of total federal energy use.

Among the White House's targets is an increase in alternative-vehicle fuels in the federal fleet. Since fiscal 2010, the number of traditional gasoline-powered vehicles owned by government agencies has declined 10 percent, EIA said.

AIR POLLUTION:

Health groups press EPA for new methane emissions limits

Sean Reilly, E&E reporter

Published: Monday, December 7, 2015

U.S. EPA should forge ahead with new emissions limits for methane and volatile organic compounds (VOCs) from existing oil and natural gas operations, similar to what it is already proposing for new sources, more than 600 nurses, doctors and other health care professionals said in a letter Friday.

"We need comprehensive rules that cover existing oil and gas wells and infrastructure to reduce methane emissions and the impact on climate," the signers told EPA Administrator Gina McCarthy. "We unite in urging EPA to move quickly to address emissions from existing sources as well."

The letter, released late Friday by the American Lung Association, fell on the final day for public comments on EPA's draft regulations to limit methane and VOC releases from new and modified oil and gas operations. Among other features, the draft, unveiled in mid-August, would require the industry to find and repair leaks and limit emissions from equipment used at natural gas transmission compressor stations (*Greenwire*, Aug. 18).

In a news release today, the Interstate Natural Gas Association of America, which represents the pipeline industry, expressed particular concern with that facet of the proposed regulations, warning that they could lead to increased methane emissions because operators would often have to "blow down" pipelines or compressors to make repairs. The news release followed some 80 pages of comments filed by the association Friday.

The oil and gas sector is the nation's largest industrial source of methane, a greenhouse gas that EPA ranks as 25 times more potent than carbon dioxide in its global warming potential. In September, the top lawyer for the agency's Office of Air and Radiation said it will become clear within the next few years whether the proposed methane rules should be broadened to cover existing facilities (*Greenwire*, Sept. 29).

CHINA:

Beijing issues 1st 'red alert' on smog

Published: Monday, December 7, 2015

Beijing officials issued the city's first-ever "red alert" over smog levels, prompting schools to close and construction to cease in the capital city.

Pollution levels in Beijing are currently lower than last week when an "orange alert" was issued, but that ranking has since been bumped in status because of projected increases in particulate matter in the coming days.

An air pollution monitor operated by the U.S. Embassy in Beijing reported that the levels of particulate matter (PM2.5) are 10 times above recommended limits. China's CCTV news channel reported that some parts of Beijing have a visibility of 660 feet.

The smog is a result of coal-powered plants and heating systems, vehicle emissions and dust from construction sites, which are lingering in the city because of humidity and a lack of wind.

The red alert has never been used before and will last until at least noon local time Thursday, when a cold front is expected to disperse the smog (BBC News, Dec. 7). **-- AK**

CLEAN POWER PLAN:

NARUC's Kavulla says federal compliance plan not acceptable to states

Published: Monday, December 7, 2015

How are legal challenges to the Clean Power Plan affecting regulators' ability to effectively plan for the future under the rule? During today's OnPoint, Travis Kavulla, president of the National Association of Regulatory Utility Commissioners and a member of the Montana Public

Service Commission, discusses how his state is working toward compliance, while concurrently legally challenging the rule. He also explains why the Clean Energy Incentive Program is not being prominently considered in compliance discussions in his state.

Click here to watch today's OnPoint.

POWER PLAN HUB:

McCarthy takes power plant rule road show to Paris

Emily Holden and Rod Kuckro, E&E reporters

Published: December 7, 2015

U.S. EPA chief Gina McCarthy takes her campaign for the Clean Power Plan to Paris this week, promoting the agency's ability to achieve greenhouse gas reductions through the rule in speeches and panel discussions at the U.N. climate conference.

This weekend, McCarthy was scheduled to deliver the keynote address in a side event co-hosted by the Edison Electric Institute about charting a low-carbon course for the U.S. power sector.

<image010.jpg>

Each Monday, **Power Plays** previews upcoming moves on the way to Clean Power Plan compliance and recaps the week's developments.

Planned speakers included executives from electric utilities Pacific Gas and Electric Co. and PNM Resources Inc., as well as the president of the Center for Climate and Energy Solutions and the executive vice president of EEI.

Today, McCarthy speaks about the Clean Power Plan alongside European Commission Environmental Commissioner Miguel Arias Cañete, and tomorrow she will discuss EPA's role in delivering on President Obama's overall climate plan.

On Wednesday, EEI and the International Emissions Trading Association co-sponsor an event to highlight how utilities might use carbon trading markets to meet CPP targets.

Officials from PG&E, Calpine Corp. and Berkshire Hathaway will participate, and EPA air chief Janet McCabe will speak.

Also Wednesday, Standard & Poor's in Paris will release a report on tools the investment community can use to manage climate risk.

On Thursday, McCarthy will speak at a side event to outline how policies in the administration's Climate Action Plan will put the country on target for 2025 greenhouse gas emissions goals.

Most of the events McCarthy attends will be live-streamed. Keep an eye out for news from E&E reporters Lisa Friedman, Jean Chemnick and Joel Kirkland, all of whom are reporting from Paris.

In the United States today, EPA general counsel Avi Garbow will keynote a conference in Las Vegas on the legal implications of new power industry regulations, particularly the Clean Power Plan. *EnergyWire*'s Ellen M. Gilmer will be reporting.

On Thursday evening, the South Carolina Department of Health and Environmental Control will host in Columbia what is billed as a public engagement session on the state energy plan and EPA's Clean Power Plan.

In other news, Colorado released a schedule of upcoming meetings on the rule. Two meetings in January will focus on the Clean Energy Incentive Program. One in February in Denver will explore compliance options, and another in March will focus on demand growth cost and reliability. The state's Air Pollution Control Division also released a summary of public comments received so far and a plan development timeline.

The Kansas Corporation Commission began soliciting public comments on the CPP last week. Read more on that below.

In case you missed it:

?□□□□□□□□ Pennsylvania environment chief John Quigley aims to be among first states to comply with Clean Power Plan (*ClimateWire*, Dec. 4).

?□□□□□□□□ Kansas utility regulators ordered a probe of the rule and will examine options to redispatch power (*EnergyWire*, Dec. 4).

?□□□□□□□□ EPA warned a federal court against granting a stay of the greenhouse gas rules and argued industry and opposing states face no irreparable harm (*E&ENews PM*, Dec. 3).

?□□□□□□□□ Missouri's air regulator is nearly certain the state will favor a mass-based compliance strategy preferred by state's electric generators (*EnergyWire*, Dec. 3).

?□□□□□□□□ FERC's Tony Clark says some states will be challenged to build new pipelines and transmission lines in time to comply with Clean Power Plan (*Greenwire*, Dec. 1).

?□□□□□□□□ Experts say accurate estimates of Clean Power Plan costs won't be possible for years (*EnergyWire*, Nov. 30).

TOP NEWS

11th Circ. Sides With Insurer Over 'Employee' Coverage

The Eleventh Circuit affirmed Tuesday that Progressive Mountain Insurance Co. doesn't have to defend a trucking company against an injured worker's claims because its policy excluded claims by "employees," even though the injured man was technically an independent contractor.

Transpo Project Process Reforms Underway, House Panel Told

Federal and state highway officials reassured House lawmakers on Tuesday that they're streamlining permitting processes and reducing bureaucratic redundancies to help get transportation projects off the ground quicker, saying they're making good on fulfilling their mandates under the last highway funding authorization law.

Volkswagen Emissions Fraud MDL Consolidated In California

The Judicial Panel on Multidistrict Litigation on Tuesday consolidated more than 500 suits accusing Volkswagen of cheating emissions standards, saying California federal court in San Francisco is the best venue given that nearly one-fifth of the suits were filed in the Golden State.

Lawmakers Nearing Deal On Customs Enforcement Bill

Congressional leaders on Monday said they are close to an agreement on a bill that will beef up trade enforcement at the nation's ports, signaling the end of months of intense debate between the House and the Senate over the legislation's provisions on duty evasion and currency manipulation.

Santa Monica Hit With Airport Landing Fees Class Action

The city of Santa Monica was hit with a putative class action in California state court Monday alleging it failed to give adequate public notice of newly adopted ordinances that allowed the city to impose "illegal" landing and fuel flowage fees at its municipal airport.

US Drags China To WTO Over Aircraft Tax Exemptions

The Obama administration on Tuesday slapped China with a new World Trade Organization case, targeting a raft policies in Beijing that impose steep taxes on imported aircraft while exempting locally manufactured planes from the same measures.

5 Firms Take Lead In Airline Ticket Antitrust Row

A New York federal court Monday approved five firms as interim co-lead counsel for a proposed class of airline passengers accusing several ticket distribution companies of forming a cartel that led to higher ticket prices.

Deals Rumor Mill: Yahoo, Verizon, Airbus Group

Yahoo won't spin off its massive $30 billion stake in Alibaba Group Holding Ltd., Verizon may look into buying Yahoo's core business, and Airbus Group is seeking buyers for Vector Aerospace Corp.

AUTOMOTIVE

GM Told Other Switch Evidence OK In Ignition Bellwether

A New York federal judge on Monday said a driver could introduce evidence of ignition switches other than the type at issue in the bellwether trial in multidistrict litigation over General Motors' defective ignition switches, as the company has admitted elsewhere that some switches were identical.

NHTSA Ramps Up Probe Of Air Bag Problems In 630K Jeeps

The National Highway Traffic and Safety Administration has launched a deeper investigation into about 630,000 Jeep Wranglers over the possibility that an electrical problem can prevent driver's-side air bags from deploying on impact.

Ex-GM Franchisee Says Ally Unethically Shuttered Dealers

Ally Financial Inc. on Monday removed to North Carolina federal court a lawsuit brought by the owner of a defunct General Motors dealership who says the lending institution and automaker conspired to illegally and unscrupulously force his dealership and others located outside major metropolitan areas out of business.

DOT Proposes Update Of 5-Star Vehicle Safety Rating Tests

The U.S. Department of Transportation says it plans to update and add new testing requirements and protocols to the National Highway Traffic Safety Administration's 5-star safety rating system used to test the safety of new vehicles, according to a statement issued by the agency Tuesday.

PTAB Axes 'Identical' Bid To Review Car Camera Patent

The Patent Trial and Appeal Board refused French auto parts maker Valeo SA an inter partes review of a rear-view camera patent, saying Monday the board already took up the company's previous, nearly identical IPR request for the patent and deemed it valid.

RAIL

Norfolk Southern Snubs Revised Bid From Canadian Pacific

U.S. rail company Norfolk Southern Corp. on Tuesday rejected a revised takeover offer from hedge fund-backed Canadian Pacific Railway Ltd., saying the new bid is even worse than the original $28.4 billion proposal, which Norfolk shot down last week.

Rail Cos. Fight To Keep Expert In Play In Price-Fixing Row

Rail carriers involved in now-stalled multidistrict litigation over railroad fuel surcharges have blasted an attempt by the proposed class of rail shippers to exclude their expert, maintaining that the shippers' "sham" motion was not made in good faith, according to documents released Monday from a D.C. federal court.

Pa. Judge Sends Mitsubishi Rail Car Venture Fight To NY

A Pennsylvania federal judge backed Mitsubishi Electric Corp.'s bid to transfer a multimillion-dollar spat over a spoiled joint venture to New York on Tuesday, finding that train systems manufacturer Westcode Inc. was not the first to file suit.

LOGISTICS

FedEx Claims Deja Vu In Driver Classification Suit At DC Circ.

FedEx has told the D.C. Circuit that a case challenging the National Labor Relations Board's classification of delivery drivers as employees rather than as independent contractors is "indistinguishable" from a 2009 case in which the court ruled in FedEx's favor, arguing that precedent hasn't changed in the meantime.

FedEx Wants To Know Drug Shipping Grand Jury Instructions

FedEx Corp. told a California federal court Tuesday that it thinks the grand jury instructions in a criminal case accusing the company of colluding with illegal online pharmacies to deliver prescription drugs were erroneous and urged the court to disclose certain instructions despite prosecutors' protests.

Logistics Co. Can't Trim $3.7M Suit Over Cost Estimates

A Pennsylvania federal judge ruled Monday that a transportation logistics provider can't narrow a plastic container manufacturer's $3.7 million lawsuit accusing the company of misrepresenting the cost of contracted services, saying a pair of misrepresentation claims

MARITIME

Fla. Canal Isn't Navigable Waterway, 11th Circ. Told

Florida's Miami-Dade County urged the Eleventh Circuit on Monday to affirm a lower court's dismissal of a negligence suit that sought to apply federal maritime law to a canal 7 miles inland, saying the trial judge correctly ruled the waterway is not navigable and she lacked jurisdiction.

W.Va. Restaurant Barge's Sinking Not Covered, Insurer Says

A Markel Corp. insurer asked a West Virginia federal court on Friday to let it off the hook from covering the cost of a waterfront restaurant that sunk into the Ohio river, saying the business that owned the barge wasn't the policyholder.

INFRASTRUCTURE

NH Gov. Raises Doubts Over $5B Kinder Morgan Pipeline

New Hampshire Gov. Maggie Hassan has urged the Federal Energy Regulatory Commission to either take steps to address the concerns of affected local communities or consider blocking Kinder Morgan's $5 billion Northeast Energy Direct natural gas pipeline project from moving forward.

Ex-Official Says La. Contract Relevant To Chicago Bribe Case

A former Chicago official accused of accepting bribes from a red-light camera vendor told a federal judge Tuesday that testimony about a contract in Louisiana with the same vendor should be allowed at his trial, saying allegations there raised questions about the motivations of company executives testifying for the government.

Caltrans Says Tribe's Bypass Suit Is Related To Enviro Case

The California Department of Transportation urged a federal judge Tuesday to hear a recent complaint brought by two Native American tribes challenging Caltrans' $300 million highway project after the judge handed the agency a win in an earlier suit by Northern California environmental groups, claiming conflicting rulings could result if the cases remain separate.

LEGAL INDUSTRY

5 Reasons You'll Never Make Equity Partner

Early in your legal career, you may have set your sights on BigLaw's gold ring: an equity partnership at a white-shoe firm. But even the best-laid plans sometimes go awry.

3 Tips For A Smooth Post-Merger Integration

For some of the law firms inspired by this year's merger mania, it can be easy to get so caught up in deal negotiations that the important — and hard — work of actually combining can get short shrift. Here, experts give their top three tips for a smooth post-merger integration process.

Bryan Cave Pressed Maxim Deal Amid Red Flags, Jury Hears

A former Bryan Cave LLP attorney facing criminal charges over a failed acquisition of Maxim magazine told a New York federal jury Tuesday that the firm had instructed him to continue working on the deal even after a lender raised concerns about possible fraud.

BigLaw Gets In Lockstep With Cravath Bonuses

A gaggle of BigLaw firms fell in lockstep late Monday and Tuesday with the associate bonus scale set by Cravath Swaine & Moore LLP, the first firm this year to come out of the gates with payout figures.

Reid Accuses Republicans Of Blocking Latino Judicial Noms

Senate Minority Leader Harry Reid accused chamber Republicans Tuesday of "obstruction" in delaying federal judicial confirmations and contended the tactic disproportionately affected Latino nominees, including a Third Circuit candidate who has been waiting more than a year.

Cigna, Orrick Atty Agree To Mediate False Claims Row

Cigna has voluntarily dismissed its complaint against an Orrick Herrington & Sutcliffe LLP attorney who the insurer had accused of filing hundreds of thousands of dollars in false insurance claims, with the parties opting for mediation, according to a Tuesday filing in Virginia federal court.

New Philly Bar Chief Slams Legal Services Tax, Nominee Delay

The incoming chancellor of the Philadelphia Bar Association told a roomful of legal luminaries on Tuesday that they could not become complacent in the face of professional threats including both a legal services tax that nearly passed the Pennsylvania Senate last month and continued delays in confirming federal judges.

Boosting Pledges, McCarthy Says Utility Support Ensures ESPS Will 'Stick'

PARIS – EPA Administrator Gina McCarthy is highlighting the power sector's view that it can comply with the agency's landmark greenhouse gas rules for existing power plants as proof that the rule will "stick," while also seeking to reassure other countries at United Nations climate talks here that GOP attempts to block the rule ultimately will fail.

News Briefs

EPA Urged To Extend Climate ESPS FIP Comment Deadline

Utility groups and state regulators are asking EPA to extend the comment period for its proposed federal plan for implementing its greenhouse gas rule for existing power plants in noncompliant states, as well as the informal comment period for the agency's Clean Energy Incentive Program (CEIP), which they argue should also be housed under the regulatory docket.

EDF Methane Measurements Could Inform EPA Rules

A new Environmental Defense Fund (EDF) paper published Dec. 7 in the *Proceedings of the National Academy of Sciences* that reports findings from a series of methane measurement studies in Texas' Barnett Shale could inform EPA's pending first-time emissions standards for the oil and gas sector's methane releases.

AIR POLLUTION:

Conservative judge predicts court battle over EPA 'co-benefits'

Robin Bravender, E&E reporter

Published: Monday, December 7, 2015

As opponents sparred in court last week over the fate of a major U.S. EPA rule to slash mercury emissions, a federal judge forecast that the next big fight over the rule will center on how the agency measures so-called co-benefits.

The U.S. Court of Appeals for the District of Columbia Circuit is grappling with how to handle EPA's standards to cut power plants' emissions of mercury and other hazardous pollutants after the Supreme Court earlier this year ruled that the agency had failed to properly consider costs before it issued the rule.

During oral arguments before the appeals court Friday, Republican-appointed Judge Brett Kavanaugh pointed to concerns raised by Supreme Court Chief Justice John Roberts with EPA's practice of counting health "co-benefits" in justifying the economic impacts of its clean air rules. Those are health benefits not directly attributable to reductions in mercury.

"He referred to that as an end-run and bootstrapping and disproportionate," Kavanaugh said of Roberts' comments. "I assume that's going to be the key battleground six months, a year from now, will be whether co-benefits are properly part of the analysis or not."

Kavanaugh and two of his Democratic-appointed colleagues are now weighing a request from industry and states to vacate EPA's rule while the agency brings it in line with the Supreme Court's ruling. But the three-judge panel on Friday appeared reluctant to gut the rule, in part because much of the industry has already made investments to comply with the standards and because EPA appears poised to reissue the same standards with revised considerations of costs (*Greenwire*, Dec. 4).

The agency has committed to fully addressing the high court's concerns by April 15, and EPA issued a proposed finding last month concluding that the benefits of its mercury standards justified the costs of the rule.

If the court agrees to keep the rule in place while EPA tweaks its finding, states and industry could return to court to challenge that finding. Kavanaugh and others have predicted that EPA's assessment of co-benefits will be a key part of their arguments.

"I think there is a pretty good chance that that will be front and center if there is a challenge" to EPA's finding that it is appropriate and necessary to regulate power plants' mercury emissions, said Jeff Holmstead, an industry attorney at Bracewell & Giuliani LLP who served as EPA's air chief during the George W. Bush administration. "A lot of people, including me, have been pretty critical of EPA relying on co-benefits to justify pretty much everything, including the Clean Power Plan."

The Clean Power Plan aims to slash greenhouse gas emissions from existing power plants. EPA has predicted the rule will lead to big cuts in soot and smog, curbing emissions of sulfur dioxide, nitrogen oxides and particulates along with reducing heat-trapping carbon dioxide. Industry contends that EPA's reliance on co-benefits double-counts health benefits for reductions of pollutants that aren't the regulation's focus.

Whether the co-benefits issue comes up in the mercury case or elsewhere, Holmstead said, "I think it will find its way into the courts."

EPA's analysis of the mercury rule found that it would cost industry $9.6 billion a year, while overall benefits would tally as much as $90 billion annually. Of those total benefits, up to $6 million would come from reduced mercury pollution. Most of the rest of the monetary benefits would stem from reductions in particulate matter, a pollutant that is not a target of the mercury rule.

During oral arguments in March, Roberts grilled the Obama administration's solicitor general, Donald Verrilli, about the analysis, suggesting EPA was using the mercury rule to get reductions in particulate matter that it wouldn't be able to otherwise under the Clean Air Act.

"It's a good thing if your regulation also benefits in other ways," Roberts said. "But when it's such a disproportion, you begin to wonder whether it's an illegitimate way of avoiding the different -- quite different limitations on EPA that apply in the criteria program."

Earthjustice attorney Jim Pew said EPA "doesn't have to consider benefits at all to satisfy the Supreme Court decision," and said industry challenges to the agency's calculations of co-benefits are "extraordinarily disingenuous."

John Walke, an attorney at the Natural Resources Defense Council, said Kavanaugh's comments

Friday "could be him signaling reservations about EPA's co-benefits." But more likely, he said, it "reflects that industry has been raising that issue from day one."

Kavanaugh was the lone judge to dissent in the appeals court's divided ruling last year that upheld EPA's mercury rule before the high court shot it down.

But while Kavanaugh "has shown himself skeptical of EPA's position in this rulemaking and other rulemakings," Walke said, his "remarks from the bench won't influence what industry will do at all because they have already been doing what he is forecasting."

PARIS TALKS:

U.S., E.U. press other wealthy countries to pay their share

Lisa Friedman, E&E reporter

Published: Monday, December 7, 2015

LE BOURGET, France -- Should Qatar, the richest country in the world, help poorer nations deal with climate change? What about Singapore, the third-richest, where the gross domestic product per capita is five times higher than in Bulgaria? Or Saudi Arabia, where the average household income is higher than that of Italy, Spain and the Czech Republic?

The United States, the European Union and a growing number of vulnerable countries say yes. They are working to design language in a new climate agreement here that would upend the current structure that demands only the industrialized countries as designed in 1992 pay up.

The move is coming under fierce attack by the Group of 77 (G-77), which represents developing countries. U.S. Special Envoy for Climate Change Todd Stern today argued, though, that the poorest and most threatened by climate change should welcome the efforts.

SPECIAL SERIES

Paris Climate Talks provides in-depth coverage of the 21st U.N. summit to forge a new global agreement to reduce carbon dioxide emissions. Visit the special report.

"I think countries like the islands and the least developed countries are enthusiastically supportive. I'm not entirely sure what they do or they don't say in the councils of the G-77," he said. "What we're talking about here is to create a larger pool of funds."

At the moment, the debate is down to a battle of words. Europe wants language in a burgeoning deal to call for all countries "in a position to do so" to deliver money. Another wording option -- reportedly preferred by China -- is to ask that countries "willing to do so" write the checks.

Europeans, meanwhile argued the phrase "willing" is too wishy-washy. "Come on, seriously," one negotiator said. "Countries like Singapore and South Korea and Bahrain? They're richer than us.

How come they can't contribute?"

The answer -- like so many things in these negotiations -- lies in the age-old divisions between rich and poor nations, and the fraught nature of trying to shift those roles. Even some very poor countries like Sudan say they recognize that more countries might deliver more money in a new system but continue to argue to protect the wealthier nations in their bloc.

"Let first those who are committed, let them stick to their promises. If they are not giving, how do you expect others to give?" said Muawia Shaddad, a professor at the University of Khartoum and a member of the Pan African Climate Justice Alliance.

Ambassador Joyce Mxakato-Diseko, a South African diplomat who is chairing the G-77, complained last week that there are no criteria for countries "in a position to do so" and accused wealthy nations of trying to wriggle out of their 2009 pledge to mobilize $100 billion annually by 2020.

Saudi Arabian Minister of Petroleum Ali bin Ibrahim Al-Naimi holds a meeting on the sidelines of U.N. climate talks. His country is being asked to shoulder a greater share of the burden of helping poorer nations grapple with climate change. Photo by Lisa Friedman.

"In my family, I tell my children, 'You will clean your room.' I do not say that someone will clean the room. I say, 'You, John, will clean the room.' I say, 'You, Grace, will do the dishes.' There is no someone 'in a position to do so' will wipe the floor," Diseko said. "I need accountability, I really do need accountability. I need to know above all that the floor has been cleaned."

Meanwhile, activists who work on finance issues say they are largely in favor of efforts to expand the base of donors -- though many of them called for some set of criteria to delineate what countries do and don't have the capacity to deliver. Stern today said that's unlikely to happen.

"We think that the principle that is driving this agreement, I hope in a direction that will be successful in the end, is the notion that countries are in many respects nationally determining," he said. "The world buy-in ... is based on the notion that countries are able to make their own decisions, and I think we're going to stick with that," he said.

On the one hand, putting such language in the agreement would reflect a reality that's already happening. China has pledged $3.1 billion, more than the United States, to poor nations through a South-South Cooperation Fund, while developing countries ranging from Indonesia to Mongolia have put money toward the Green Climate Fund.

Heather Coleman of Oxfam America said making it official in legal text is "important to send a signal that countries will continue to provide finance." At the same time, she noted, many nations are fearful that allowing language in a legal text will obligate them to deliver.

"There are some developing countries that definitely need to pony up," she said. "It's clear that countries like Singapore, countries like Qatar should be on the hook."

Meanwhile, she said, "A country like India should not be obligated to put forward finance but certainly should be encouraged to do something."

Developing nations are asking the United States and other wealthy countries to commit that a pledge to mobilize $100 billion annually by 2020 will materialize and expand, but complain that's being held hostage to a desire to break down barriers in the years afterward.

Stern described it as "all part of a package" but said he is confident countries will find common language. "We are open to various formulations," he said.

APPROPRIATIONS:

Jewell says Interior stands firm against omnibus riders

Phil Taylor, E&E reporter

Published: Monday, December 7, 2015

LAS VEGAS -- Interior Secretary Sally Jewell said Friday that her department is opposing all policy riders under consideration for a government spending bill that could undermine the Obama administration's lands, energy and wildlife policies, though she conceded that the negotiations are largely above her pay grade.

But Jewell said her Capitol Hill allies are playing a stout defense and that she believes the White House will reject one particular rider by Senate Energy and Natural Resources Chairwoman Lisa Murkowski (R-Alaska) to permit a road through the Izembek National Wildlife Refuge in Alaska.

"You can't start negotiating your own execution," Jewell said at the Western Governors' Association's winter meeting here last weekend, when asked about the administration's willingness to concede on some policy measures in order to pass a long-term spending measure.

Government funding authority ends Friday, but congressional aides have offered no signs of a breakthrough on either the spending measure or another must-pass bill to extend tax provisions (*E&E Daily*, Dec. 7).

"There are a lot of riders that would undo very, very important work that's been done over the years, including the work we've done on the sage grouse here, riders that would undo many years of work on stream protection in the context of mining," Jewell said. "We oppose those, and I think you'll see us staying together on that."

Yet Jewell also said she plays a relatively minor role in the spending bill negotiations between the White House and Senate and House leaders. Talks also involve non-Interior policy issues like U.S. EPA limits on global warming emissions and the ban on exporting crude oil, as well as non-environmental issues including Syrian refugees.

Jewell said candidly that she "won't be party" to the highest-level discussions. "No one's calling me and saying, 'Could you give on this or could you give on that?'" Jewell said. "We have a clear focus that we don't want any of them."

Previously proposed environmental policy riders would affect Interior's protection of imperiled wildlife, including sage grouse and gray wolves, its regulation of oil and gas drilling, and its protection of streams from coal mining waste, as well as the president's ability to set aside Interior lands for permanent protection.

Murkowski last summer included a rider in the Senate's fiscal 2016 spending bill for Interior and EPA that would approve construction of a gravel road through Izembek, which she and other Alaska officials contend is critical to the safety of residents in King Cove who lack reliable access to medical care.

Jewell rejected the road and an associated land swap offer nearly two years ago in a move that infuriated Alaskans. She said the White House understands the importance of Izembek to migratory birds and a host of other wildlife.

"There's reasons that we the taxpayer have paid almost $54 million to not build this road, and the White House is well aware of that," Jewell said. "So I believe they'll stand firm with us on that."

But the road is a top priority for Murkowski, who chairs the Appropriations Committee panel that funds Interior. "I want to figure out a way to find safe passage for the people of King Cove, and I'm going to figure it out one way or another," she said last week when asked about the rider's inclusion in an omnibus.

Environmental groups are resolutely opposed to the road. "The rider would ensure irreparable damage to an internationally treasured landscape and set a precedent that would jeopardize wildlife refuge and wilderness protections on public lands across the country," said a memo released this morning by Defenders of Wildlife.

Other environmental riders believed to be on the negotiating table would block U.S. pledges to the Green Climate Fund and target the Clean Water Act jurisdiction rule, the stream protection rule, the White House's National Environmental Policy Act climate guidance, the social cost of carbon metric, Interior's proposal to overhaul public coal valuation, the new updated ozone standard, and the coal ash disposal rule.

Aides for House and Senate spending panels said this morning that negotiations continued through the weekend. One said an agreement is likely sometime this week.

However, it's unclear whether both sides will have language ready by today, as House Appropriations Committee Chairman Hal Rogers (R-Ky.) had hoped.

Reporters Corbin Hiar and Manuel Quiñones contributed.

COAL:

Dems call for tougher penalties in wake of Blankenship verdict

Manuel Quiñones, E&E reporter

Published: Monday, December 7, 2015

Congressional Democrats are calling for tougher penalties for violations of federal mine safety laws in the wake of former Massey Energy Co. CEO Don Blankenship's conviction in a safety case.

A federal jury last week found Blankenship guilty of conspiring to violate mine safety standards. The misdemeanor carries up to one year in prison (*E&ENews PM*, Dec. 3).

Even though prosecutors and groups welcomed the verdict as "unprecedented," Democratic lawmakers say it's further evidence of the need for a new mine safety law.

"I am troubled that criminal behavior involving a conspiracy to commit willful violations of mandatory mine safety and health standards can only result in a mere misdemeanor penalty that cannot exceed one year in prison even when a mine operator recklessly exposes a miner to significant risk of serious injury, serious illness or death," said Virginia Rep. Bobby Scott, top Democrat on the House Education and the Workforce Committee.

Investigations into the 2010 explosion at Massey's Upper Big Branch mine in West Virginia accused Blankenship of being more focused on profits than on safety.

"A misdemeanor sanction is a woefully insufficient deterrent for criminal conduct for an operator who repeatedly puts production ahead of safety requirements," Scott said Friday.

Democratic legislation, H.R. 1926, would impose a felony penalty, up to five years in prison and up to $1 million in fines for operators that jeopardize the lives of workers.

Mining companies and many of their allies on Capitol Hill, particularly on the Republican side, have rejected the need for new legislation. Rather, they say regulators should better use the tools already at their disposal.

The National Mining Association has also been touting its own mine safety initiative and is calling on regulators to take a more cooperative approach to enforcement.

CAMPAIGN 2016:

Sanders climate plan seeks drastic emissions reductions

Jennifer Yachnin, E&E reporter

Published: Monday, December 7, 2015

Vermont Sen. Bernie Sanders (I) today unveiled an aggressive climate change platform, vowing to enact a carbon tax in an effort to reduce greenhouse gas emissions by 80 percent by 2050, as well as pledging to "ban fossil fuels lobbyists from working in the White House" if elected.

In an expansive proposal posted to his campaign website, Sanders -- who is competing for the Democratic presidential nomination against former Secretary of State Hillary Clinton and former Maryland Gov. Martin O'Malley -- echoed his prior criticisms of the fossil fuel industry, as well as his desire to make significant federal investments in both energy efficiency and renewable resources including wind and solar power.

"Right now, we have an energy policy that is rigged to boost the profits of big oil companies like

Exxon, BP, and Shell at the expense of average Americans. CEO's are raking in record profits while climate change ravages our planet and our people -- all because the wealthiest industry in the history of our planet has bribed politicians into complacency in the face of climate changes," Sanders said in a statement. "Enough is enough. It's time for a political revolution that takes on the fossil fuel billionaires, accelerates our transition to clean energy, and finally puts people before the profits of polluters."

In his plan, Sanders called for a carbon tax, an idea that has gained little traction in a Republican-controlled Congress, in an effort to cut pollution by 40 percent by 2030 and by more than 80 percent by 2050.

"Bernie will tax polluters causing the climate crisis, and return billions of dollars to working families to ensure the fossil fuel companies don't subject us to unfair rate hikes," Sanders' website states. "The carbon tax will also protect those most impacted by the transformation of our energy system and protect the most vulnerable communities in the country suffering the ravages of climate change."

A Sanders administration would also look to rein in tax benefits to the fossil fuel industry, as well as banning any oil or gas lobbyists from holding future jobs in the White House.

"Massive lobbying and unlimited Super PAC donations by the fossil fuel industry gives these profitable companies disproportionate influence on our elected leader. This practice is business as usual in Washington and it is not acceptable," Sanders said. The senator's plan also cites his support for efforts to undo recent Supreme Court decisions that gave rise to significant spending by third-party groups, as well as supporting public financing of federal elections.

Sanders likewise echoed his support for a federal investigation into whether Exxon Mobil Corp. misled the public about climate change for almost four decades, vowing to "bring climate deniers to justice so we can aggressively tackle climate change."

The senator called for a Justice Department inquiry following reports from *InsideClimate News* and a collaboration between the *Los Angeles Times* and the Columbia University Graduate School of Journalism that found Exxon discovered the threat of climate change almost 40 years ago but paid millions of dollars to keep the issue out of the public eye (*ClimateWire*, Oct. 28). Exxon has since pushed back on the validity of the reporting.

"It is an embarrassment that Republican politicians, with few exceptions, refuse to even recognize the reality of climate change, let alone are prepared to do anything about it," Sanders said.

Moratorium on nuclear

In addition, Sanders' plan focuses on making new investments in solar and wind power energy production. He said the administration would create 10 million new energy-related jobs by establishing a "100 percent clean energy system."

His proposal would also seek to curtail the use of nuclear energy, and includes a moratorium on nuclear power plant license renewals in the United States.

"Bernie believes that solar, wind, geothermal power, and energy efficiency are proven and more cost-effective than nuclear plants -- even without tax incentives -- and that the toxic waste byproducts of nuclear plants are not worth the risks of the technology's benefit," Sanders' website states.

The senator similarly vowed to ban offshore drilling, drilling in the Arctic Ocean and mountaintop

coal mining.

Sanders also pledged to seek an increase in fuel economy standards, boosting requirements to 65 mpg by 2025, an increase over the current goal of 54.5 mpg by that time.

The proposals garnered immediate praise from environmentalists, including those at the Sierra Club and NextGen Climate, who have yet to endorse in the Democratic primary.

"We commend Senator Sanders for proposing this ambitious energy plan. These proposals are rooted in a clear recognition of the fact that the top priorities for a responsible energy policy are cutting dangerous carbon pollution as fast as possible, and providing even further momentum for the booming clean energy economy," Sierra Club Executive Director Michael Brune said in a statement. "We can't afford to wait a minute longer to tackle the climate crisis, or to ensure that all American families have clean air to [breathe] and clean water to drink."

But American Petroleum Institute spokesman Reid Porter dismissed Sanders' plan in a statement to *Greenwire*, asserting the senator's proposals are peppered with "false choices."

"The United States is the global leader in oil and natural gas production. We are creating millions of jobs, generating billions in revenue for the government, and we are leading the world in reducing carbon emissions. We are second to no one. Denial of this reality is preposterous, and it does a disservice to our nation's pursuit of long-term energy security and to the thousands of families who rely on affordable and reliable energy," Porter said. "It's not a matter of whether we need oil and natural gas to fuel our economy, but where will we get it. We will either continue to rely on energy from less stable parts of the world or we can focus on the developing America's abundant resources right here at home."

POLITICS:

Obama's Cabinet orchestrates sales pitch for Clean Power Plan

Jean Chemnick and Joel Kirkland, E&E reporters

Published: Monday, December 7, 2015

LE BOURGET, France -- President Obama's top advisers have arrived in force here today to begin a final push toward a global climate accord, vowing that U.S. carbon reductions are here to stay.

U.S. EPA Administrator Gina McCarthy, Energy Secretary Ernest Moniz and Secretary of State John Kerry are among the administration officials who have joined 40,000 national delegates, global warming activists and journalists gathering in this Paris suburb. Agriculture Secretary Tom Vilsack and Interior Secretary Sally Jewell participated in the first week of the U.N. summit but have since departed.

The administration's collective task is to convince a skeptical world that Obama's Climate Action Plan will survive his presidency, and it has them singing from the same hymnal.

SPECIAL SERIES

Paris Climate Talks provides in-depth coverage of the 21st U.N. summit to forge a new global agreement to reduce carbon dioxide emissions. Visit the special report.

In an interview with *Greenwire*, McCarthy said interagency cooperation was strong in the run-up to the conference because securing an agreement is such a vital part of Obama's legacy.

"It has been incredibly seamless in terms of both planning for this event and working it through," she said. "We have coordinated doing energy Cabinet meetings totally focused across the administration on Paris."

Agencies have held a morning phone call in the lead-up to the conference to make sure they're all on the same page, and the White House has been offering guidance. "Our communications people talk to each other," McCarthy said.

McCarthy and Moniz took the same United Airlines flight Friday night, as did White House Council on Environmental Quality chief Christy Goldfuss. After landing at Charles de Gaulle Airport on Saturday morning, they made their first appearances jointly later that day, where the Cabinet members pledged the United States would make good on its commitments to cut greenhouse gas emissions.

McCarthy and Moniz told their international audience that federal carbon regulations are legally enforceable, even if Congress isn't happy with the policy and a hostile Republican president is elected in 2016.

"We have political realities in terms of how we can move forward," Moniz said today. "The president made clear -- and I think it's very important -- that ultimately we do eventually have [to have] legislation that provides an economywide approach. But in the meantime, we will emphasize executive authorities that already exist for meeting our ambitious targets."

EPA's Clean Power Plan rule to cut emissions across the electricity sector is a core policy component supporting the U.S. commitment ahead of the Paris talks to reduce emissions at least 26 percent below 2005 levels by 2025. The U.N. climate summit, led by France, is pressing for an agreement by the end of this week.

"This rule is going to stand the test of time," McCarthy said, referring to the Clean Power Plan regulations. "This rule, despite what one might read, is being actively engaged in by every state in the United States."

McCarthy and her air policy chief, Janet McCabe, who is also in Paris, have been the administration's top salespeople on climate rules for the past two years, after Obama directed the agency to get moving on power-sector regulations. As the talks enter their critical second week, McCarthy said one of her roles will be to meet with delegations and answer questions about her agency's flagship climate policy.

The power-sector regulation faces stiff opposition from Republican-led states in the South and other coal-dependent states. There are court challenges and vows to overturn the rule from nearly every candidate for the Republican presidential nomination.

But McCarthy, McCabe, White House senior climate and energy adviser Brian Deese, Senate Democrats and even some friendly electric utilities are trying to beat back any narrative that the United States might ultimately default on its climate commitments, walking away from a Paris deal as it did from the Kyoto Protocol.

McCarthy has been meeting with counterparts from other countries since the Clean Power Plan was first proposed in 2014, and many of the heads of delegation here in Le Bourget are now acquaintances.

"We have had a steady stream of countries coming in asking to understand it, is it going to last, what are all these lawsuits, what is Congress doing?" she said. She said the international community generally accepts that the rule is likely to withstand the coming challenges.

"EPA is recognized for its technological expertise in this area, as well as how well we do defending the Clean Air act and our actions," she said.

The White House has engaged extensively with China and India, the world's first- and fourth-largest carbon emitters, in hopes of paving the way for a climate deal. For that, it had to convince leaders of both countries that the U.S. economy will adopt carbon controls.

It's trying to shift discussions to the U.S. priorities for a final agreement, including establishing a five-year review period and an accountability system for checking nations' progress on cutting emissions.

Taking the stage in a grand hall inside the 19th-century Petit Palais art museum, before loud applause from global warming activists, Kerry hammered home the U.S. position that both industrialized and rich developing nations such as China and South Korea are equally responsible for slashing greenhouse gas emissions.

"We feel very strongly in the United States that in 2015, it is time to get rid of this rigid differentiation between developed and developing," Kerry said.

"It does no good to come to Paris and have a great big meeting and get out of here and say 'there are a lot of goals' if they're not being implemented and you're not moving down the road."

Kerry spoke about the need for the largest-emitting nations to play an active role in cutting emissions. The issue about "differentiation" is a critical paradigm shift for the U.N.-sponsored talks. China, India, Brazil and other big developing countries for the past two decades have insisted on being treated differently. That was put into place in the 1990s as the path forward.

Also today, former California Gov. Arnold Schwarzenegger (R) made a rousing speech before the plenary of international delegates. Meanwhile, back in a decked-out museum in central Paris, California's current governor, Jerry Brown (D), and energy-sector CEOs rallied activists.

'U.S. has taken clear action'

Any hope of Congress forging a political consensus around carbon came to a screeching halt after Obama returned from the last major U.N. climate summit in 2009. In 2010, the Senate let a House-passed carbon cap-and-trade bill die.

That history -- and the long memories of delegates who recall Senate Republicans' refusal to ratify the Kyoto accord in 1997 -- is some of the context around the administration's presence here.

"The U.S. has taken clear action," said McCabe, EPA's assistant administrator for air and radiation. "It's important that people see the United States has done that."

In a panel discussion sponsored by the Edison Electric Institute, PG&E Corp. CEO Anthony Earley said cutting U.S. emissions will rely on electric utilities and states driving toward the Clean Power Plan's target: cutting power emissions 32 percent below 2005 levels by 2030.

"From a deployment standpoint, we've shown that utilities are really the perfect organizations to leverage the scale we have in accelerating the transformation of the system."

And Earley leaned on the notion that utilities -- under some pressure from rooftop solar companies and other distributed generators -- are still the backbone of the system, warning that policymakers shouldn't "take it for granted."

The cost of implementing changes is "manageable," he asserted.

Multiple threads of discussion around deployment of energy technology are going on across Paris. And leaders here say "signals" are needed for the private sector to start spending billions on energy technology needed by India and other large developing countries.

Microsoft co-founder Bill Gates partnered with Moniz and the White House on a public-private partnership deal designed to raise billions of dollars through 2020. It would couple billions of dollars in investment from the wealthiest people in the world with a doubling of research and development spending by 20 nations. Under the plan, U.S. R&D spending on cleaner forms of energy technology would go from about $2 billion to $5 billion.

On a separate track is a call for $100 billion in financing for poor and developing countries to deploy new technology and protect themselves from the worst effects of global warming.

As this is happening, the small cadre of U.S. utility officials -- mostly sustainability officers -- is talking about Clean Power Plan implementation.

In California, deploying massive amounts of solar and wind power could eventually require a regional Western market, Earley told *Greenwire*.

"We need to create regional electricity markets," he said. "The hallmark of renewables is that they're unpredictable; we don't control them. If you have a regional market, we'll be better able to trade this clean energy."

NOTEBOOK:

Mayors wine, dine with movie stars

Lisa Friedman, Jean Chemnick and Katie Howell, E&E reporters

Published: Monday, December 7, 2015

LE BOURGET, France -- As haggard negotiators struggle to eke out a climate deal in the industrial northern suburbs of Paris, 450 mayors from around the world have been wining and dining with movie stars and ambassadors across the capital city and patting themselves on the back for doing more than the most progressive national governments could hope to achieve.

The U.S. Conference of Mayors, which sent a delegation to Paris for the climate summit, today unveiled a new report that touts the efforts of U.S. mayors as leaders on climate over the last 10 years.

SPECIAL SERIES

Paris Climate Talks provides in-depth coverage of the 21st U.N. summit to forge a new global agreement to reduce carbon dioxide emissions. Visit the special report.

"USA mayors and others throughout the world continue to lead and show that local climate action is meaningful and making a difference in curbing harmful carbon emissions," Baltimore Mayor Stephanie Rawlings-Blake, who is also president of the group, said at an event today at the residence of U.S. Ambassador to France Jane Hartley. "A number of my mayoral colleagues are already in their second decade of climate leadership. This serves as a reminder that a big part of our success in protecting our planet will turn on how well we support and accelerate local level climate action throughout the world."

The mayors on Friday met at Paris' opulent Hôtel de Ville, where they sipped fine French wine, heard from movie stars Leonardo DiCaprio and Robert Redford, and adopted the Paris City Hall Declaration, which restates local efforts to fight climate change and calls for national negotiators at the climate summit to do the same.

"Mayors are a powerful group. You are the catalysts. Be bold, be courageous -- the world is watching you," DiCaprio told the mayors Friday, according to the London *Guardian*.

Inslee, Brown knock 'knucklehead' Republicans

Governors, too, are touting their efforts to take subnational action on climate change. Govs. Jerry Brown of California and Jay Inslee of Washington, both Democrats, have advanced statewide emissions-reduction policies. And they took aim at Republicans for their continued opposition to climate action and science.

"America is really divided," Brown told an international audience in Paris this weekend. But he said that brokering an agreement would help underline how out of step U.S. Republicans are.

"Signing a good agreement will help us overcome what I call the mindless opposition, because there are a lot of people here who are not on the left who will be signing this agreement," Brown said. "And I think that idea will get through to these knuckleheads."

Inslee, who served in the House before becoming Washington's governor, said that pricing carbon would help facilitate "the green energy transition."

"On the West Coast, we live on innovation, it's our stock and trade," Inslee said. "It's what we sell as intellectual capital."

Washington state also has "knuckleheads," he said, like the state legislators who blocked his proposal to tax carbon. He now plans to use existing legal authority to cap emissions.

The two governors shared the stage with the mayors of Oakland, Calif., and Vancouver, Wash., and the environment minister of British Columbia.

China will honor its financial pledge

China will make good on its financial commitment on climate change, even if the United States doesn't, the Chinese head of delegation Su Wei told E&E.

<image010.jpg>

China's head of delegation, Su Wei (left) speaking through an interpreter at the U.N. climate conference. Photo by Lisa Friedman.

Asked to comment on the U.S. Congress' insistence that the $3 billion pledge over four years that President Obama made to the Green Climate Fund will never see the light of day, Su said it would be "most unfortunate" if the money were blocked.

"It would not be positive to the atmosphere in Paris, and every leader is determined to make Paris a successful conference," he said. "The financial issue is one of the key issues that needs to be settled here in Paris.

"Having said that, China's contribution to the South-South Cooperation Fund is not dependent on what developed country parties make," he said. No matter what happens, that $3.1 billion pledge "would remain as it is now."

Inside the E.U.'s secret meeting room

Isaac Valero-Ladron, a senior adviser to the European Union's energy commissioner, gave E&E a sneak peak at the bloc's coordination room over the weekend to offer a sense of how challenging it is to develop a common position.

<image011.jpg>

E.U. negotiators meet daily in this conference room to hash out agreements. Photo by Lisa Friedman.

Each morning, lead negotiators from the 28 member nations meet in the vast conference room in the European pavilion for an hour and a half, often going paragraph by paragraph through the text.

That's only the beginning of several such meetings throughout the day. What solar-loving Germany can live with on calls for decarbonization, or a 1.5-degree temperature-rise goal, for example, might be very different than that of coal-hungry Poland.

"We are not a country. We are 28 countries," Valero-Ladron said.

Overflow delegates bring flair to drab meeting rooms

Dark suits are de rigueur at the conference complex where negotiations are underway, but every now and then a splash of color can be seen -- typically around the Brazil delegation's headquarters.

Brazilian activist Jose de Lima Kaxinawa, a member of a tribe that lives in the Amazon rainforest of Brazil and Peru, is one of hundreds of "party overflow members" at the climate talks.

Brazil applies a unique open-door policy that allows anyone to join the government's delegation to the talks if they pay their own way. The nation has 800 delegates -- by far the largest number of overflow members, who wear purple stickers that indicate they can be asked to leave meetings when there isn't enough room.

The United States and China also have large representations, but they don't dress as vibrantly.

De Lima Kaxinawa has been wearing a flashy orange, yellow and red headdress and a colorful robe, according to Reuters.

Other Brazilian campaigners wear traditional dress or casual clothes. Francinara Soares Martins had on bone earrings and brightly colored feathers yesterday while handing out deforestation posters.

"We are very inclusive," Luiz Alberto Figueiredo Machado, a former Brazilian foreign minister, told Reuters of the overflow member policy.

Perhaps they should have taken the Chunnel

Green groups are blasting British leaders and negotiators for flying to the Paris negotiations.

Friends of the Earth called out Prime Minister David Cameron and International Development Secretary Justine Greening and her team for flying to the COP 21 talks last week.

The return flight from London's Heathrow airport to Paris' Charles de Gaulle emits 122 kilograms of carbon dioxide per person, according to Eurostar. By comparison, a train trip would emit 10.9 kilograms per person, Eurostar said.

"It's perfectly easy to understand that many people will find British ministers flying to a climate conference to be hypocritical," said Craig Bennett of Friends of the Earth, according to the London *Guardian*.

Pope prays for the negotiations

Pope Francis yesterday prayed for the success of the Paris negotiations.

"For the sake of the common home we share and for future generations, every efforts should be made in Paris to mitigate the impact of climate change and, at the same time, to tackle poverty and to let human dignity flourish," Francis said from the Vatican, according to Vatican radio and reported by *USA Today*.

NEGOTIATIONS:

Russia won't block a climate deal -- Putin

Published: Monday, December 7, 2015

Russian President Vladimir Putin has signaled that his negotiators will not block an agreement backed by other major countries at the U.N. climate change conference underway in Paris.

Though Russia has been a major player in global climate talks since 1992, Putin has not put much priority on environmental initiatives and has expressed skepticism about climate change (*ClimateWire*, Aug. 25, 2010).

According to Paris conference participants, however, Putin had assured German Chancellor Angela Merkel that he would not sink a deal. Russia has met with criticism for submitting an emissions goal that it has essentially already met, requiring few changes to its economy (*ClimateWire*, April 6).

Russia also stands to gain from any shift to cleaner-burning natural gas, as it has some of the largest reserves in the world (Harvey/Taylor, London *Guardian*, Dec. 7). **-- BTP**

PEOPLE:

France's top climate diplomat wears host hat, too

Published: Monday, December 7, 2015

France's top climate change negotiator must not only help work out a deal in her country's interests at the climate change conference currently underway outside of Paris, but also play the role of organized host to 196 delegations and a bevy of other attendees.

From installing lighting in each workspace that is soft and comforting to ensuring that the conference's cuisine befits France's culinary reputation to acting as a mediator between disagreeing sides over a deal, Laurence Tubiana has had a lot on her mind these past 18 months.

"This is an incredibly hard job, and she doesn't come to the job as a deeply seasoned professional diplomat," U.S. senior climate envoy Todd Stern said of Tubiana. "But using her think tank background, and the signature French Embassy events -- it all affects the larger buy-in to Paris."

Tubiana has indeed drawn on France's elegant embassies worldwide to host events and dinners with key political and business leaders and journalists to make sure everyone is on the same page (*ClimateWire*, Dec. 7). She has worked to avoid a repeat of the 2009 climate conference in Copenhagen, Denmark, where many blamed the Danish government's poor organization and lack of openness for helping sink the talks.

"Climate change is about ecosystems," Tubiana said. "Climate change negotiations are about ego-systems" (Coral Davenport, *New York Times*, Dec. 6). **-- BTP**

ENERGY EFFICIENCY:

Nations, Ikea plan looks to screw in 10B LED bulbs

Published: Monday, December 7, 2015

As a way to ratchet down the 5 percent of global emissions caused by lighting, governments such as China, India and the United States and large companies such as Ikea have pledged to fit 10 billion ultra-efficient lightbulbs worldwide.

India and China have said they will increase production and sale of light-emitting diodes, or LEDs, and Ikea, the Swedish furniture multinational, said it will stock its shelves with more energy-efficient bulbs to sell to its customers.

Pollution emitted from lighting sources makes up 15 percent of the world's electricity consumption. An overnight transition to LED lights could save approximately 735 million metric tons of emissions, or enough to displace around 250 coal-fired power plants.

"If we have 20 years of the global carbon budget left, we need to create products that are fantastically energy-efficient and roll them out to scale very fast," said Steve Howard, Ikea's chief sustainability officer (Arthur Neslen, London *Guardian*, Dec. 7). **-- AK**

SUPREME COURT:

Justices reject challenge to Colo. renewable standard

Robin Bravender, E&E reporter

Published: Monday, December 7, 2015

The Supreme Court today refused to hear an appeal in a case challenging Colorado's renewable energy standard.

In a short order issued this morning, the high court rejected a request by the anti-regulatory nonprofit Energy & Environment Legal Institute challenging Colorado's requirement that 20 percent of all electricity sold in the state come from renewable sources.

Lawyers for the nonprofit argued that the standard illegally regulated economic activity beyond the state line, and they asked the justices to take on the issue after a three-judge panel on the Denver-based 10th U.S. Circuit Court of Appeals unanimously upheld the standard earlier this year (*Greenwire*, Oct. 16).

David Schnare, an attorney representing the Energy & Environment Legal Institute in the case, said today that petitioners may ask the justices to reconsider their refusal to hear an appeal in the case, *Energy & Environment Legal Institute v. Joshua Epel*. Schnare said he believes the ruling from the 10th Circuit conflicts with another ruling from the San Francisco-based 9th U.S. Circuit Court of Appeals in the case *Sam Francis Foundation v. Christies Inc.*, regarding whether a California law regulating art sales violates the dormant Commerce Clause, which bars states from discriminating against interstate commerce.

"The major reason that they take these kinds of cases is to cure circuit splits," Schnare said.

Michael Freeman, a Colorado-based attorney at Earthjustice representing environmentalists in the case, said today that the "argument that there's a flaw in the 10th Circuit ruling is meritless." He added, "the courts have consistently rejected the theory" asserted by the Energy & Environment Legal Institute "that incidental impacts on commerce" somehow violate the dormant Commerce Clause.

No word on high-stakes water cases

Supreme Court watchers were waiting for news today about whether the justices would agree to hear pending wetlands cases, but the court has punted on making that decision.

The justices are weighing whether to hear two cases regarding whether courts can review federal regulators' determinations about which areas are subject to Clean Water Act protections. The

Obama administration and property rights advocates have asked the high court to weigh in on the issue after lower courts have offered conflicting opinions. Many court watchers predict that the justices will agree to hear at least one of the cases (*Greenwire*, Oct. 30).

The justices are now expected to consider whether to take the cases, *U.S. Army Corps of Engineers v. Hawkes Co. Inc.* and *Kent Recycling Services LLC v. U.S. Army Corps of Engineers*, at their conference this Friday and may announce their decision later this week or early next week.

SCIENCE:

Climate change may not have driven Vikings from Greenland

Published: Monday, December 7, 2015

For nearly five centuries, thousands of Vikings eked out a living on Greenland's harsh shores before unexpectedly departing in the mid-15th century. Until now, their disappearance has often been explained as a result of changing climate, but new research is raising doubts on that theory.

Norse settlement of Greenland occurred soon after the start of the "Medieval Warm Period," a 300-year period of more temperate climates in most parts of the world that was followed by the "Little Ice Age," which made weather harsher. A study published last week in *Science Advances* asserts that the changing climate was not likely a big factor in the Vikings' retreat from Greenland, since the region's glaciers appear to have been nearly as large during the Medieval Warm Period as they were during the Little Ice Age.

"This study suggests that while the Vikings may have left Iceland when it was relatively warm, they arrived in the Baffin Bay region, and it was relatively cool," said lead author Nicolás Young, a professor at Columbia University's Lamont-Doherty Earth Observatory. "So for their initial settlement, and the first few centuries when they were there, they persisted and thrived somewhat during a relatively cool climate. And so it's sort of a stretch to say that a cool climate is what drove them out of the region, when they demonstrated that they could be somewhat successful during a cool climate."

The scientists were able to measure the extent of the glaciers over time from their impressions left in the earth and could date the soil and rocks left behind as they retreated.

"There's certainly strong evidence in Europe that that was a real thing," said Young of the Medieval Warm Period. "But it's certainly not a global event; it was patchy, with quite a bit of variability" (Chris Mooney, *Washington Post*, Dec. 4). **-- BTP**

BUSINESS:

Food giants have bigger carbon footprint than some countries

Published: Monday, December 7, 2015

Global food production companies such as Cargill Inc., Tyson Foods Inc. and Yara International ASA have larger carbon footprints than many countries, including the Netherlands, Vietnam or Colombia, a new analysis shows.

The realization from Global Justice Now highlights the role the agri-food sector plays in climate

change, which contributes as much as 29 percent of global emissions, although the industry has received far less attention than the energy industry in the past.

Moreover, the amount of emissions that agriculture businesses report is said to be only a fraction of actual pollutants the companies release, resulting in millions of metric tons of pollution that has been kept from the public.

According to Global Justice Now's new findings, U.S. animal feed manufacturer Cargill, for example, reports annual emissions of 15 million metric tons, but if it included growing feed crops, the number would spike to some 145 million metric tons.

Tyson, the largest beef producer in the United States, says it emits 5 million metric tons but does not include keeping livestock in that number, which would increase the amount to 34 million metric tons. Yara, one of the world's largest fertilizer producers, emits nearly 12.5 million metric tons but does not take into account its use of fertilizers, boosting that number to 75 million metric tons.

"They shouldn't be able to indulge themselves in the fiction that they are not culpable for these indirect climate impacts," said Alex Scrivener, policy officer at Global Justice Now and co-author of the analysis (Tom Levitt, London *Guardian*, Dec. 7). **-- AK**

FEDERAL AGENCIES:

Government power consumption hits new low

Hannah Hess, E&E reporter

Published: Monday, December 7, 2015

The U.S. government, one of the largest energy consumers in the world, cut its fuel use to the lowest levels in the past 40 years, according to an U.S. Energy Information Administration analysis released today.

The decline indicates progress on President Obama's plan to reduce the greenhouse gas emissions of federal agencies and make federal buildings more efficient, EIA noted, with a decline in jet fuel consumption by the Defense Department accounting for the biggest change (*Greenwire*, Nov. 23, 2015).

As part of the plan, the White House aims to reduce per-mile greenhouse gas emissions from agency fleet vehicles by 30 percent over the next decade. Over the previous five fiscal years, greenhouse gas emissions from the federal fleet have fallen by a total of 3 percent, EIA said.

Data from the Department of Energy's Federal Energy Management Program show energy usage in fiscal 2014 -- 0.94 quadrillion British thermal units -- declined to the lowest level since the government started monitoring consumption in 1975. Energy bills totaled $23.1 billion, falling from $24 billion in 2013 (*Greenwire*, Feb. 4).

Vehicles and equipment energy usage accounted for 61 percent of all federal energy consumed, with the remainder consumed by facilities. Energy consumption by DOD made up 78 percent of total federal energy use.

Among the White House's targets is an increase in alternative-vehicle fuels in the federal fleet. Since fiscal 2010, the number of traditional gasoline-powered vehicles owned by government agencies

has declined 10 percent, EIA said.

AIR POLLUTION:

Health groups press EPA for new methane emissions limits

Sean Reilly, E&E reporter

Published: Monday, December 7, 2015

U.S. EPA should forge ahead with new emissions limits for methane and volatile organic compounds (VOCs) from existing oil and natural gas operations, similar to what it is already proposing for new sources, more than 600 nurses, doctors and other health care professionals said in a letter Friday.

"We need comprehensive rules that cover existing oil and gas wells and infrastructure to reduce methane emissions and the impact on climate," the signers told EPA Administrator Gina McCarthy. "We unite in urging EPA to move quickly to address emissions from existing sources as well."

The letter, released late Friday by the American Lung Association, fell on the final day for public comments on EPA's draft regulations to limit methane and VOC releases from new and modified oil and gas operations. Among other features, the draft, unveiled in mid-August, would require the industry to find and repair leaks and limit emissions from equipment used at natural gas transmission compressor stations (*Greenwire*, Aug. 18).

In a news release today, the Interstate Natural Gas Association of America, which represents the pipeline industry, expressed particular concern with that facet of the proposed regulations, warning that they could lead to increased methane emissions because operators would often have to "blow down" pipelines or compressors to make repairs. The news release followed some 80 pages of comments filed by the association Friday.

The oil and gas sector is the nation's largest industrial source of methane, a greenhouse gas that EPA ranks as 25 times more potent than carbon dioxide in its global warming potential. In September, the top lawyer for the agency's Office of Air and Radiation said it will become clear within the next few years whether the proposed methane rules should be broadened to cover existing facilities (*Greenwire*, Sept. 29).

CHINA:

Beijing issues 1st 'red alert' on smog

Published: Monday, December 7, 2015

Beijing officials issued the city's first-ever "red alert" over smog levels, prompting schools to close and construction to cease in the capital city.

Pollution levels in Beijing are currently lower than last week when an "orange alert" was issued, but that ranking has since been bumped in status because of projected increases in particulate matter in the coming days.

An air pollution monitor operated by the U.S. Embassy in Beijing reported that the levels of

particulate matter (PM2.5) are 10 times above recommended limits. China's CCTV news channel reported that some parts of Beijing have a visibility of 660 feet.

The smog is a result of coal-powered plants and heating systems, vehicle emissions and dust from construction sites, which are lingering in the city because of humidity and a lack of wind.

The red alert has never been used before and will last until at least noon local time Thursday, when a cold front is expected to disperse the smog (BBC News, Dec. 7). **-- AK**

CLEAN POWER PLAN:

NARUC's Kavulla says federal compliance plan not acceptable to states

Published: Monday, December 7, 2015

How are legal challenges to the Clean Power Plan affecting regulators' ability to effectively plan for the future under the rule? During today's OnPoint, Travis Kavulla, president of the National Association of Regulatory Utility Commissioners and a member of the Montana Public Service Commission, discusses how his state is working toward compliance, while concurrently legally challenging the rule. He also explains why the Clean Energy Incentive Program is not being prominently considered in compliance discussions in his state.

Click here to watch today's OnPoint.

POWER PLAN HUB:

McCarthy takes power plant rule road show to Paris

Emily Holden and Rod Kuckro, E&E reporters

Published: December 7, 2015

U.S. EPA chief Gina McCarthy takes her campaign for the Clean Power Plan to Paris this week, promoting the agency's ability to achieve greenhouse gas reductions through the rule in speeches and panel discussions at the U.N. climate conference.

This weekend, McCarthy was scheduled to deliver the keynote address in a side event co-hosted by the Edison Electric Institute about charting a low-carbon course for the U.S. power sector.

<image012.jpg>

Each Monday, **Power Plays** previews upcoming moves on the way to Clean Power Plan compliance and recaps the week's developments.

Planned speakers included executives from electric utilities Pacific Gas and Electric Co. and PNM Resources Inc., as well as the president of the Center for Climate and Energy Solutions and the executive vice president of EEI.

Today, McCarthy speaks about the Clean Power Plan alongside European Commission

Environmental Commissioner Miguel Arias Cañete, and tomorrow she will discuss EPA's role in delivering on President Obama's overall climate plan.

On Wednesday, EEI and the International Emissions Trading Association co-sponsor an event to highlight how utilities might use carbon trading markets to meet CPP targets.

Officials from PG&E, Calpine Corp. and Berkshire Hathaway will participate, and EPA air chief Janet McCabe will speak.

Also Wednesday, Standard & Poor's in Paris will release a report on tools the investment community can use to manage climate risk.

On Thursday, McCarthy will speak at a side event to outline how policies in the administration's Climate Action Plan will put the country on target for 2025 greenhouse gas emissions goals.

Most of the events McCarthy attends will be live-streamed. Keep an eye out for news from E&E reporters Lisa Friedman, Jean Chemnick and Joel Kirkland, all of whom are reporting from Paris.

In the United States today, EPA general counsel Avi Garbow will keynote a conference in Las Vegas on the legal implications of new power industry regulations, particularly the Clean Power Plan. *EnergyWire*'s Ellen M. Gilmer will be reporting.

On Thursday evening, the South Carolina Department of Health and Environmental Control will host in Columbia what is billed as a public engagement session on the state energy plan and EPA's Clean Power Plan.

In other news, Colorado released a schedule of upcoming meetings on the rule. Two meetings in January will focus on the Clean Energy Incentive Program. One in February in Denver will explore compliance options, and another in March will focus on demand growth cost and reliability. The state's Air Pollution Control Division also released a summary of public comments received so far and a plan development timeline.

The Kansas Corporation Commission began soliciting public comments on the CPP last week. Read more on that below.

In case you missed it:

- Pennsylvania environment chief John Quigley aims to be among first states to comply with Clean Power Plan (*ClimateWire*, Dec. 4).

- Kansas utility regulators ordered a probe of the rule and will examine options to redispatch power (*EnergyWire*, Dec. 4).

- EPA warned a federal court against granting a stay of the greenhouse gas rules and argued industry and opposing states face no irreparable harm (*E&ENews PM*, Dec. 3).

- Missouri's air regulator is nearly certain the state will favor a mass-based compliance strategy preferred by state's electric generators (*EnergyWire*, Dec. 3).

- FERC's Tony Clark says some states will be challenged to build new pipelines and transmission lines in time to comply with Clean Power Plan (*Greenwire*, Dec. 1).

- Experts say accurate estimates of Clean Power Plan costs won't be possible for years (*EnergyWire*, Nov. 30).

Richard,

You're too fast for me. I just sent you the data (with errors) as of 6AM this morning (Wed). I double checked the macro and your label should be correct (with CO2 values of 473c, 453h, 419comb).

Dave

Subject: RE: Voice Mail from Dave Good (Work) (1 minute and 2 seconds)

Thanks Dave, I checked my calculation and saw that I made a typo and entered a highway CO2 value of 350 instead of 353. I have now processed the correction and if you find time maybe you can run the audit again. The adjusted combined CO2 value should be 419 g/mi.

Thanks,

Richard

Volkswagen making good progress with its investigation, technical solutions, and Group realignment

- **Initial results of the emissions investigation available**
- **Approximately 450 external and internal experts involved in the investigations**
- **100 terabytes of data secured – equivalent to information in approximately 50 million books**
- **Volkswagen will have future emissions tests evaluated independently**
- **Technical solutions for customers in Europe developed; implementation to begin in January 2016**
- **Group realignment making good progress**

Wolfsburg, December 10, 2015 – The Volkswagen Group's realignment is well underway. The Group is making progress on all five of the priorities it set at the end of October: The technical solutions for customers in Europe have been devised, presented to the authorities, and positively evaluated by them. These solutions will begin to be implemented in January 2016. The emissions investigation is producing results, and initial consequences have already been drawn based on the findings to date. The implementation of the new structure is proceeding according to plan, and the process of developing a new strategy has commenced. The Chairman of the Supervisory Board of Volkswagen AG, Hans Dieter Pötsch, told the press in Wolfsburg today: "The Volkswagen Group is fully functional in every respect, even during these eventful days. How, and when we meet the current challenges is primarily – although not solely – up to us. In order to pass this test, we must make an enormous, common effort – and we are all ready to do so." The Chairman of the Board of Management, Matthias Müller, said: "We are doing everything to overcome the current situation, but we will not allow the crisis to paralyze us. On the contrary, we will use it as a catalyst to make the changes Volkswagen needs."

For the first time, the Company provided detailed commentary on the status of its investigation, which is being coordinated by a special committee of the Supervisory Board. Approximately 450 internal and external experts are involved in the investigations, which are being conducted in two phases. An internal review, being conducted by a task force of experts from various Group companies with a clearly defined mandate and a deadline, is focused on the mandate to Group Audit by the Supervisory Board and the Management Board to investigate relevant processes, reporting and monitoring systems, and the associated infrastructure. Group Audit will provide its findings to the external experts of Jones Day. The Supervisory Board has given this internationally respected law firm a parallel mandate to completely clarify the facts and responsibilities – i.e., among other things, it has been asked to conduct a forensic investigation. In connection with its work, Jones Day is being provided with operational support by the audit firm Deloitte.

Group Audit has identified process weak points

As reported on Wednesday, extensive internal investigations, which were subject to external independent review, did not confirm the suspicion of irregularities during the CO_2 certification process. Now, the first significant findings in the investigation of the nitrogen oxide (NOx) issue are available. Group Audit's examination of the relevant processes indicates that the software-influenced NOx emissions behavior was due to the interaction of three factors:

- The misconduct and shortcomings of individual employees
- Weaknesses in some processes
- A mindset in some areas of the Company that tolerated breaches of rules.

It is clear that, in the past, deficiencies in processes have favored misconduct on the part of individuals. This is true, for example, for test and certification processes affecting our engine control devices, which were not suited to preventing use of the software in question. Group Audit has suggested specific remedies to correct this. We are concentrating on structuring these processes more transparently and systematically. For example, in the future, software for engine control devices will be developed more strictly in accordance with the 4-eyes principle. In addition, the bodies responsible for the release of such software are being reorganized. They will be given more sharply defined and binding powers and responsibilities. Deficiencies were also found in reporting and monitoring systems. The main problem there was that responsibilities were not sufficiently clear. Volkswagen will now further sharpen them. Group Audit also found deficiencies in some areas of Volkswagen's IT infrastructure. These deficiencies will also be remedied. Volkswagen will introduce IT systems that allow individual processes to be monitored with greater efficiency and transparency. This will simultaneously reduce our dependence on individuals when problematic processes have to be identified and, if necessary, escalated. As Pötsch stated: "Group Audit's investigation is producing valuable findings, which will help us create a structure that, rather than favoring breaches of regulations, will prevent them, or at least allow them to be detected early on."

The Company has already drawn a key conclusion based on Group Audit's findings, namely that its testing practice must undergo comprehensive changes. Volkswagen has decided that in the future emissions test will be evaluated externally and independently. In addition, randomly selected real-life tests to assess emissions behavior on the road will be introduced.
Chairman of the Supervisory Board Pötsch stated: "We hope that this will help Volkswagen regain lost trust."

More time is required for the external investigation

Although Group Audit's analysis of the processes will be concluded shortly, Jones Day will need well into next year in order to finish its work. The external investigators will need more time for their investigation, for two reasons. The first is that they have a massive volume of data to screen. At present, 102 terabytes of information have been secured, which is the equivalent of the information contained in approximately 50 million books. More than 1,500 electronic data storage units have been collected from approximately 380 employees. The second reason is that their investigation of the facts takes legal responsibility into account. Therefore, their findings must not only be plausible and consistent, but must also hold up in court. Volkswagen plans to provide a status update on the external investigation at its Annual General Meeting on April 21, 2016.

The information that has been screened to date has largely explained the origin and development of the nitrogen oxide issue. It proves not to have been a one-time error, but rather a chain of errors that were allowed to happen. The starting point was a strategic decision to launch a large-scale promotion of diesel vehicles in the United States in 2005. Initially, it proved impossible to have the EA 189 engine meet by legal means the stricter nitrogen oxide requirements in the United States within the required timeframe and budget. This led to the incorporation of software that adjusted nitrogen oxide emission levels according to whether vehicles were on the road or being tested. Later, when an effective technical process was available to reduce NOx emissions, it was not employed to the full extent possible. On the contrary, the software in question allowed the exhaust gas treatment additive “AdBlue” to be injected in variable amounts such that the NOx values were particularly low when vehicles were in the test bay, but significantly higher when vehicles were on the road.

Hans Dieter Pötsch stressed that, “No business transaction justifies overstepping legal and ethical bounds.” As a first step, nine managers who may have been involved in the manipulations were suspended. Pötsch emphasized: “I here and now guarantee that we will pursue our thorough investigation to its conclusion. I vouch for this personally, as does the entire Supervisory Board of Volkswagen AG.”

Technical solutions, which have been positively evaluated by the German Federal Motor Transport Authority (“Kraftfahrtbundesamt”), are now available for the European variants of the EA 189 engine type affected. Volkswagen is thus ensuring that the models affected in Europe will meet all legal requirements in the future. The costs of implementing these solutions will be manageable in technical, manufacturing, and financial terms. The software of the 2.0 and 1.2 liter TDI will be updated. For the 1.6 liter TDI, a so-called flow transformer will be used that increases the measurement precision and, in combination with redesigned software, will optimize injection quantity.

Now that the technical solutions have been approved, Volkswagen is working intensely on plans to implement them. The recall of the highest-volume variant, the 2.0 liter TDI, will begin in January 2016. The recall of the 1.2 liter TDI is currently scheduled to begin in the second quarter. The implementation phase for the 1.6 liter models is planned to begin in the third quarter to allow time to prepare for the hardware modification. Under the current plan, the entire initiative will take at least all of calendar year 2016. Matthias Müller, Chairman of the Board of Management, promised: "Volkswagen will not rest until this matter has been resolved once and for all to our customers’ satisfaction.” Volkswagen will inform the owners of the affected vehicles individually as to when their vehicles will be updated. Volkswagen guarantees that the solutions will be implemented free of charge. The company waives any statute of limitations for the technical solutions, and will provide an appropriate replacement vehicle if required.

Due to far stricter nitrogen oxide limits in the United States, it is a greater technical challenge to retrofit the vehicles such that all applicable emissions limits can be met with one and the same emissions strategy. To this end, Volkswagen is cooperating closely with the United States Environmental Protection Agency (EPA) and the California Air Resources Board (CARB). The solution designed for North America will be presented as soon as it has been approved by the responsible authorities.

Implementation of the new Group structure commenced

Parallel to overcoming the crisis, Volkswagen is also instituting a comprehensive new alignment that affects the structure of the Group, as well as its way of thinking and its strategic goals.

Volkswagen will be managed in a more decentralized fashion in the future, and its brands and regions will be granted more independence. The Group's Board of Management is fully focused on its core task: advancing the major, global issues for the future, as well as synergies, controls, and strategy. Volkswagen will have significant input to the technical changes that have a major impact on its own business model, becoming more agile, and streamlining its decision-making processes. In addition, Volkswagen will become leaner and improve cost efficiency. All these structural changes ultimately aim to reduce managerial complexity and ensure that the Group can be effectively led over the long term.

At an organizational level, with the appointment of Dr. Christine Hohmann-Dennhardt, the Integrity & Law area will be represented as its own department on the Group's Board of Management in the future – a clear indication that these issues are extremely important to Volkswagen. Significantly more importance will be attached to digitalization, which will report directly to the Chairman of the Board of Management. Overall, direct reports will be reduced from more than 30 to 19.

The renewal of personnel in the Group has recently again been given new impetus. Since the beginning of 2015, the Group's Board of Management has seen six new members join, seven of the brands have had their top personnel changed, and eight departments falling within the CEO's area of responsibility now have new heads. Müller stated: "The team with which we wish to address the challenges of the coming months and years is in place." The details of the new structure are to be worked out in the first quarter of 2016. The new structure will be in place Group-wide by the start of 2017.

New mindset initiated

Müller noted: "We can have the best people, and a great organization, but we can do nothing without the right attitude and mentality." During the upcoming process of change toward a new way of thinking, Volkswagen can build on its traditional strengths: quality consciousness, strong identification with its vehicles, and a high degree of social responsibility. According to Müller, the future will be about more open discussions, closer cooperation, and a willingness to allow mistakes if they are understood as an opportunity to learn. The Chairman of the Board of Management stated, "We don't need yes-men, but managers and engineers who make good arguments in support of their convictions and projects, who think and act like entrepreneurs. I am calling for people who are curious, independent, and pioneering. People who follow their instincts and are not merely guided by the possible consequences of impending failure. In short: the future at Volkswagen belongs to the bold. We need a little more Silicon Valley, coupled with the competence from Wolfsburg, Ingolstadt, Stuttgart, and the other Group locations."

New strategic destination under development

In addition, Volkswagen has initiated development of a new strategic target: "Strategy 2025", with which Volkswagen will address the main issues for the future, is scheduled to be presented in mid 2016.
Müller explained, "We are realigning Volkswagen strategically and technologically. Our goal is to courageously and decisively participate in shaping the future of mobility." Among other things, the

Group aims to achieve a significant expansion of its sales outside of its current core business. Furthermore, a digitalization and an electrification offensive are being prepared.

In parallel, Volkswagen is currently doing everything it can to limit the effect the current situation has on its business performance. The operating business is meeting expectations, and the 2015 annual forecast, which was updated at the end of October, remains unchanged. The sales figures are very mixed as regards the various markets and brands. Müller explained, “Overall, the situation is not dramatic, but, as was to be expected, it's tense.”

In summary, the Chairman of the Board of Management stated: “Although the current situation is serious, this company will not be broken by it. We have a clear mission: we will create a new, better, and stronger Volkswagen. A company that uses its strengths to make the transition to the new world of automobiles. A company that now releases new forces, and takes better advantage of its huge potential. And, last but not least, a company that will be successful over the long term on the basis of strong values.”

Seeking Speedy Ruling, Critics Ask D.C. Circuit To Split Issues In ESPS Suit

States and industry groups that are seeking to overturn EPA's greenhouse gas rule for existing power plants are asking the appellate court hearing the case to bifurcate the litigation, suggesting an expedited briefing schedule on "fundamental core" legal issues to allow for a ruling likely before states must demonstrate their initial compliance next September.

Greenwire

PARIS TALKS:

Kerry demands action, vows aid ahead of summit conclusion

Jean Chemnick, E&E reporter

Published: Wednesday, December 9, 2015

LE BOURGET, France -- The fate of the planet may hang on what happens here in the next two days, Secretary of State John Kerry said this morning.

Kerry, who has been involved in the U.N. climate negotiations since their inception, told delegates gathered in an airfield outside of Paris that the time for delay is over. They must resolve differences and forge an agreement or risk losing their best chance to avert catastrophe.

"If a global community cannot come together and refuses to rise to this challenge, if we continue to allow calculated obstruction to derail the urgency of this moment, we will be liable for a collective moral failure of historic consequence," he said.

SPECIAL SERIES

Paris Climate Talks provides in-depth coverage of the 21st U.N. summit to forge a new global agreement to reduce carbon dioxide emissions. Visit the special report.

Kerry, who as a Massachusetts senator attended the 1992 Earth Summit in Rio that led to these negotiations, said that while the next few days will not result in a deal that solves climate change, it must "chart a new path" that will lead to a sustainable future.

"We need to get the job done," he told an audience of delegates and officials who will spend the next days grappling with contentious issues ranging from legal form to climate aid for poor countries.

He presented the United States as a reliable partner in these talks, seizing the opportunity to disparage U.S. Republicans who say that human-driven warming doesn't exists.

"My friends, these people are so out of touch with science that they believe rising sea levels don't matter because in their view the extra water is just going to spill out of the sides of a flat Earth," he said. U.S. EPA Administrator Gina McCarthy and others have spent considerable time this week holding news conferences and meeting with delegations to argue that the agency's Clean Power Plan and other policies will withstand GOP attacks.

The top U.S. diplomat, meanwhile, told his audience that the United States is aware of its historic contribution to the emissions that are driving warming and is determined to help resolve the problem.

But while the Obama administration has won kudos from many for its ambitious domestic agenda on climate change -- including its new power-plant emissions controls -- poor countries continue to insist that developed countries provide them with more guarantees of aid for adaptation, mitigation, and loss and damage. Rich countries have promised to help raise $100 billion a year by 2020, but there are substantial disagreements between developed and developing countries about how that aid should be counted and uncertainty about where it will come from.

Poor countries note that while private investment may be available for green energy projects and other means of mitigation, the same is not true for adaptation. They insist that rich countries provide more certainty about what they will contribute directly and that such help come in the form of grants rather than loans.

Kerry responded this morning by announcing that the United States would double the money now flowing to adaptation grants by 2020 (*Greenwire*, Dec. 9). That means increasing expenditures from the State Department, U.S. AID and the Treasury Department from about $431 million last year to $860 million by the end of the decade. He acknowledged in his remarks that many of the countries most affected by warming did little to cause it and in some cases may face losing their homes to sea-level rise and other threats.

"We will not leave the most vulnerable nations among us to quite literally weather the storm alone," Kerry pledged.

Adaptation aid would be additional

A senior official said earlier today that the rollout would be a net increase to U.S. adaptation funding. The funds will support programs at the State Department and other agencies.

The administration has pledged separately to provide $3 billion over the next four years to the United Nations' Green Climate Fund to help poor countries cope with climate change and reduce their own emissions. But less than half of that money will go to adaptation grants, and the pledge ends in 2020.

"With this commitment, we are committing to an enduring effort to ramp up our investments in adaptation, of which our contribution to the Green Climate Fund will be component, but which will endure beyond that additional GCF contribution and which will be reflected in increased investment through State, through USAID and through Treasury," the official said.

The money will go to projects to help climate-vulnerable countries better forecast and prepare for changing weather patterns, adapt to changes in precipitation by trapping rainwater, or to help islands shore up their mangroves, among other things, the official said. These are already underway through U.S. AID and other agencies.

The fate of the Green Climate Fund remains uncertain. Congress must pass legislation by Friday to fund the federal government, and while the administration has said it is prioritizing its fiscal 2016 GCF contribution of $350 million in the State Department budget, it remains unclear whether that will be provided. The adaptation funding would be available in the future if the State Department "prioritizes" the funding in its budget, the official said.

But Sen. John Barrasso (R-Wyo.), who heads a key Senate Foreign Relations Committee subcommittee, said in a statement to *Greenwire* that Kerry's announcement is just the latest example of the administration making promises it can't keep without authorization from Congress.

"Secretary Kerry is simply trying to buy off developing nations with money he doesn't have and Congress won't give him," he said. "Thirty-six senators recently joined me in pledging to President Obama that there will be no international climate funding without Senate approval."

Aid a 'strategic play'

The offer of aid is intended to help the world reach a climate agreement that will be a key component of President Obama's climate legacy.

The United States hopes it will spur poor countries to accept its priorities in these talks, especially a legal architecture that does not make emissions targets subject to international law and that the United States can therefore participate in without consent from the Senate. Other top U.S. asks include provisions to ensure greater transparency of emissions reporting, language lessening the differences between developed and developing countries' responsibilities, and certainty that rich countries will never be liable

for climate-related damages.

Paul Bledsoe, a former Clinton White House climate adviser who is attending the talks, called the announcement "a strategic play to both head off loss and damage calls by developing nations, and gain additional help from other nations on the key U.S. issues of emissions reporting and updating greenhouse gas ambitions every five years that China and India are resisting."

Nathaniel Keohane, who oversees international climate issues for the Environmental Defense Fund, said the commitment would shore up U.S. "bona fides" going in to the final negotiations by showing that the United States is sensitive to developing world priorities.

While disagreements persist, the talks seem on course to end with a deal.

U.S. analysts who were at the 2009 summit in Copenhagen, Denmark, contrasted Kerry's speech to that of former Secretary of State Hillary Clinton then. During the darkest days of that conference, when negotiations were at their lowest point, Clinton announced the United States and other wealthy countries would mobilize $100 billion annually by 2020.

"The momentum had really ground to the halt," recalled Peter Ogden, a senior fellow at the Center for American Progress who was serving as U.S. climate envoy Todd Stern's chief of staff at the time.

"She arrived and gave a really energizing speech and breathed some fresh hope into the process," he said. "It gave it a spark that it really needed at that point."

While Kerry's announcement of doubling adaptation finance to about $860 million annually is hardly as jaw-dropping, Ogden and others said the Paris moment calls for a different touch.

"You needed shock and awe" in Copenhagen, said Jake Schmidt, international programs director for the Natural Resources Defense Council.

Agreed Ogden: "Clearly there is momentum still in the process here." Kerry's speech and delivering money for adaptation takes on a key issue that very poor nations are concerned about. But, he said, "We're not experiencing anywhere near the tension that ripped the Bella Center at this juncture."

Those who work directly with poor countries to help them protect communities from the impacts of climate change, like Heather Coleman of Oxfam America, called the money important politically and substantively.

"It's a really positive political signal," Coleman said. She described the money as part of existing U.S. commitments but repackaged for adaptation. Still, she said, "It is still a critically important message to send, and it shows the commitment this administration has to delivering on what they said they will do."

Developing countries were the obvious target for the adaptation announcement -- which came after Kerry met with representatives of small island nations earlier this week.

Anthony Wolimbwa, who works for an environmental group in Uganda, called it "a good thing."

But, he said, "It really needs to be matched by capacity building. Most of the African states don't have the capacity to attract the money," he said. He also urged other wealthy countries like Japan, Canada and Australia to follow in the footsteps of the United States.

Saleemul Huq, who advises the group of least developed countries in the negotiations, called Kerry's speech "a master class in climate change issues, both diplomacy and reality."

He praised the adaptation funding and said he hopes it helps "raise the level of ambition collectively."

Raman Mehta, director of policy and programs at the Vasudha Foundation in New Delhi, said before the announcement that the developing world wouldn't accept "aspirational" commitments.

"It has now reached a stage where promises of something being done in the future don't really count, because there have been so many promises in the past that have not been met, at least in this process," he said.

When details emerged, Mehta said that the new aid promises would help, but that $800 million a year was still "a drop in the ocean" compared with the vast sums that climate-vulnerable countries would ultimately need.

Others were skeptical of the move.

Harlan Watson of the Competitive Enterprise Institute and a former George W. Bush administration climate envoy questioned whether Kerry was offering up new money.

"Can he even get the old money?" Watson asked. "He's almost waving a red flag before Congress."

Reporter Lisa Friedman contributed.

CLEAN POWER PLAN:

Litigation 'Super Bowl' tops list of 2016 cases to watch

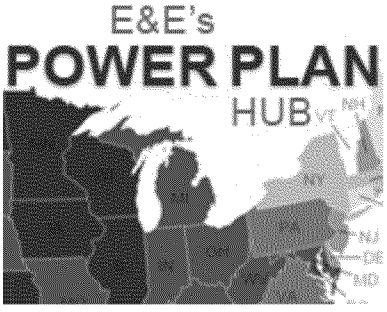
Robin Bravender, E&E reporter

Published: Wednesday, December 9, 2015

The morass of litigation engulfing the Obama administration's signature climate change rule will be the top environmental law issue to watch next year, according to new rankings from Vermont Law School.

U.S. EPA's Clean Power Plan -- a contentious rule requiring power plants to curb their greenhouse gas emissions -- is at the center of a massive court battle that is widely expected to drag on for years and ultimately wind up at the Supreme Court. The legal "Super Bowl" surrounding the regulation ranked No. 1 on the law school's annual top 10 list.

The Supreme Court "has upheld the EPA's authority and obligation to regulate carbon pollution three times," the watchlist says. "But it has also signaled that there is a limit to how much deference it will give to the EPA's assertion of broad authority with such significant economic and social consequences. So the outcome is uncertain."



The No. 2 issue identified by the law school: a battle over EPA's landmark approach for cleaning up the Chesapeake Bay.

Earlier this year, the 3rd U.S. Circuit Court of Appeals upheld EPA's pollution diet -- or total maximum daily load (TMDL) -- for the entire 64,000-square-mile watershed. The American Farm Bureau Federation and other industry groups have asked the Supreme Court to review EPA's plan, arguing that the agency far overstepped its boundaries under the Clean Water Act (*Greenwire*, Nov. 6).

"Regardless of whether the Supreme Court hears the case, the Third Circuit ruling will provide a foundation for the EPA, states, and environmental organizations in the development of plans to address polluted stormwater runoff across the country, from the Great Lakes to the Gulf of Mexico," the law school's list says.

Another issue that made the top 10 is the battle playing out over the administration's so-called Waters of the U.S. rule, dubbed "The WOTUS Wars" on the rankings.

"It will take years to achieve clarity" on that rule, wrote law student Charlotte Rand and professor Patrick Parenteau. "With the exception of the Clean Power Plan, no rule has ignited more controversy and litigation than the rule adopted by the Environmental Protection Agency and the Department of the Army seeking to clarify the meaning of the term 'waters of the United States' (WOTUS) under the Clean Water Act."

Lawsuits opposing the regulation have been lodged in courts around the country amid a debate about the proper venue for challenging the rule. Yesterday, federal judges appeared to favor keeping those lawsuits in appeals court rather than district courts across the country as requested by the regulation's challengers (*E&ENews PM*, Dec. 8).

Other topics on the list include: the aftermath of a Supreme Court decision that knocked down EPA mercury standards for power plants, litigation surrounding rules "cracking down on fracking," a pending Supreme Court decision on electricity market rules and a decision not to list the greater sage grouse under the Endangered Species Act.

FEDERAL WORKFORCE:

Paid leave bill pulled as panel passes whistleblower measures

Hannah Hess, E&E reporter

Published: Wednesday, December 9, 2015

The Senate Homeland Security and Governmental Affairs Committee today cleared two measures aimed at protecting the federal workforce from retaliation and discrimination.

But legislation meant to clarify when paid administrative leave is permitted, a joint effort by Sens. Chuck Grassley (R-Iowa) and Jon Tester (D-Mont.), was abruptly pulled from the agenda.

"But it's still in play," Tester assured *Greenwire* after the business meeting. A staffer explained that the bill, which follows Grassley's report on the ballooning costs of administrative leave, was not yet ready for introduction and still needed work with some stakeholders (*E&ENews PM*, Dec. 1).

"It's got to be somebody in the bureaucracy that doesn't like it," Grassley said when asked about wrangling over the legislation.

Chairman Ron Johnson's whistleblower protection bill, S. 2127, was approved 9-0. The Wisconsin Republican said the "Dr. Chris Kirkpatrick Whistleblower Protection Act of 2015," named for a former employee of a Veterans Affairs medical center, is meant to provide "some real disciplinary action" in cases of improper retaliation.

The bill intends to provide protections to federal employees, including access to the Office of Special Counsel, if they are terminated. It would also require the comptroller general to submit a report on retaliation against whistleblowers, specifically employees who are in probationary status.

Approval of H.R. 1557 sends that measure one step closer to the president's desk. The "Federal Employee Antidiscrimination Act" advanced on voice vote, after the panel adopted an amendment from Sen. James Lankford (R-Okla.) that would ensure supervisors face disciplinary action for discriminating against employees.

"We must do better and ensure employees have confidence that they can report an act of discrimination without suffering retaliation," said Rep. Elijah Cummings (D-Md.), sponsor of the bill, when it passed the House in July 403-0 under suspension of the rules.

The bill would require agencies to create a system to track complaints of discrimination and retaliation from beginning to end. It would also ensure that agencies report to the Equal Employment Opportunity Commission whether disciplinary action has been taken against an employee for discrimination or retaliation, and require agencies to send electronic notification to employees when such an action occurs. Agencies would have to post additional information about discriminatory practices on their websites.

The committee also advanced a second Johnson bill, S. 2375. It aims to make it easier to consolidate and sell excess federal property. A copy of the legislation was not available at press time.

FEDERAL AGENCIES:

Committee passes fraud prevention bill

Kevin Bogardus, E&E reporter

Published: Wednesday, December 9, 2015

The House Oversight and Government Reform Committee today approved legislation that would have federal agencies use data analysis tools to catch fraudulent spending.

The panel passed H.R. 4180 by unanimous consent along with a package of bills and a committee report

that slammed the Secret Service for its recent security failures.

The legislation, known as the "Fraud Reduction and Data Analytics Act of 2015," was introduced by Rep. Mark Meadows (R-N.C.), chairman of the panel's Government Operations Subcommittee, and Rep. Gerry Connolly (D-Va.), the subcommittee's ranking member.

The bill would promote agencies' using data tools to detect patterns of fraud in their spending, have them share their best anti-fraud practices with each other and give Congress regular reports on their efforts to combat fraud. Similar legislation was approved by the Senate Homeland Security and Governmental Affairs Committee this October (*E&E Daily*, Dec. 8).

Fraudulent spending has been a costly problem for the federal government. In March, the Government Accountability Office found that agencies had spent $125 billion in improper payments for fiscal 2014 (*Greenwire*, March 17).

Connolly praised the legislation today before the committee approved it.

"This is something we can do something about. This is something that the federal government can do something about," Connolly said. "In the category of oversight and reform, this bill is the classic example of a positive contribution that this committee can make."

Meadows said the bill would help the government capture funds misspent by agencies, which can then be put to better use.

"When you get improper payments of 120-plus billion dollars, those dollars could be worked and put to use in many other ways," Meadows said.

POLITICS:

Obama admin 'desperate' for Paris deal -- Sen. Barrasso

Hannah Hess, E&E reporter

Published: Wednesday, December 9, 2015

Sen. John Barrasso (R-Wyo.) portrayed the Obama administration today as "desperate" for a climate deal in Paris, and scorned the announcement of additional aid to help the world's poorest cope with global warming.

"I'm not surprised that this administration is so desperate for a deal," Barrasso told *Greenwire*, when asked about Secretary of State John Kerry's proposal for doubling the funding to $800 million.

"We've seen on the Iranian deal that they were so desperate for a deal they were willing to take any deal, which is what happened with Iran, it seems now with Paris," he said.

A member of both the Senate environment and energy committees, Barrasso has blasted the Obama administration as "out of touch" today for trying to forge an agreement at the U.N. climate talks.

He predicted Congress would oppose contributing more money "to the green climate slush fund," and said Kerry and President Obama ought to be focused on terrorism.

NEGOTIATIONS:

U.S. set to join 'ambition coalition'

Lisa Friedman, E&E reporter

Published: Wednesday, December 9, 2015

A group of countries including the United States are poised to announce tonight that they have formed an "ambition coalition" toward a new global climate accord.

Led by the European Union, the group also includes 79 African, Caribbean and Pacific island countries and 32 progressive nations like Costa Rica that have long been involved in a group called the Cartagena Dialogue. The group will announce common positions, presumably around a review of emissions targets, transparency and asking wealthy developing nations to voluntarily put money on the table for the poorest.

SPECIAL SERIES

Paris Climate Talks provides in-depth coverage of the 21st U.N. summit to forge a new global agreement to reduce carbon dioxide emissions. Visit the special report.

It also will raise a number of objections to a draft text just released this afternoon.

"We don't like the text," said a negotiator from a developed country that's part of the coalition. "There are a lot of extremes. You still have all the firewalls."

U.S. Special Envoy for Climate Change Todd Stern is expected to be involved in the announcement, as will Marshall Islands Foreign Minister Tony de Brum.

For its part, the United States has made noises over the past few days that it is part of this burgeoning coalition, but European negotiators say the deal to include the United States was sealed only hours ago.

What made the difference? U.S. "flexibility" on finance and setting a target of keeping temperature rise below 1.5 degrees Celsius, the negotiator said.

Secretary of State John Kerry today announced that the United States would double its funding for adaptation to help the world's poorest countries adapt to climate change.

Meanwhile, he said, the United States is open to a formulation in the text that embraces that goal, dear to island nations but opposed by major emerging nations because they fear agreeing to it will force them to do more than they can accept, or are getting funding to accomplish.

"I think you can write that [1.5 degrees] aspiration into the agreement in a way that doesn't make it what the target, the guidepost, for this agreement is."

NOTEBOOK:

Birth control may offer 'solution' to warming -- Catholic cardinal

Lisa Friedman and Katie Howell, E&E reporters

Published: Wednesday, December 9, 2015

LE BOURGET, France -- The Catholic Church may be softening its stance on birth control.

Cardinal Peter Turkson, Pope Francis' leading climate adviser, told BBC News that birth control could "offer a solution" to the effects of climate change.

Turkson, who is Ghanaian, said the Catholic Church has never rejected natural family planning and that birth control could help stem the impact of food availability in a warming world.

SPECIAL SERIES

Paris Climate Talks provides in-depth coverage of the 21st U.N. summit to forge a new global agreement to reduce carbon dioxide emissions. Visit the special report.

"This has been talked about, and the Holy Father on his trip back from the Philippines also invited people to some form of birth control, because the church has never been against birth control and people spacing out births and all of that. So, yes, it can offer a solution," Turkson said on the sidelines of the Paris talks.

Turkson stressed, however, that the church wasn't condoning the use of artificial birth control techniques like the contraceptive pill.

"You don't deal with one good with another evil: The Church wants people to be fed, so let's do what the Church feels is not right? That is a kind of sophistry that the church would not go for," he said.

Back at the Vatican, the Holy See has turned the facade of St. Peter's Basilica into the backdrop for a massive public art installation timed to coincide with the home stretch of the climate negotiations in Paris.

Humanitarian organizations are projecting a photo light show about nature onto the building's walls.

Images posted to the London *Guardian*'s website show a parrot, hundreds of candles, a coral reef and clownfish, among others, illuminated on the walls of the basilica.

Obama, Modi chitchat about negotiations

President Obama yesterday spoke by phone with Indian Prime Minister Narendra Modi about the ongoing Paris climate talks.

According to the White House, Obama and Modi expressed their personal commitments to nail down a strong deal this week at the conference and about working together to achieve success.

It's raining men

Men are dominating the Paris climate talks -- so says the United Nations' special envoy on climate change.

"This is a very male world [at the conference]," Mary Robinson, formerly Ireland's first female president, told the London *Guardian*. "When it is a male world, you have male priorities."

She pointed out that few of the ministers leading the negotiations are women.

"If you don't have women here, how can you say this is about people?" she asked.

French minister stays optimistic

French Foreign Minister Laurent Fabius isn't swaying on his goal to pin down a final climate deal by the Friday deadline.

"The objective is to present a final text in time for its adoption by the Conference of Parties on Friday, Dec. 11, at 1800 [noon EST]," Fabius told Reuters.

Historically, negotiations have trickled well past their deadlines and into the weekends after previous summits.

Tuvalu's 'brilliant' meeting with Kerry

E&E ran into Tuvalu Prime Minister Enele Sopoaga today and asked him about his meeting yesterday with U.S. Secretary of State John Kerry.

"It was brilliant," Sopoaga said. When asked whether he agrees with Kerry's assessment that the United States and island nations had a "meeting of the minds" on issues important to small island nations, Sopoaga remained upbeat.

"I feel the people are really moving on their mandate," he said.

Loss and damage has emerged as one of the most difficult issues in the negotiations (*Greenwire*, Dec. 8).

May the Force be with you

Yoda and Stormtroopers want to make sure Paris climate talks are successful.

Activists with the group Avaaz dressed as the "Star Wars" characters appeared today at one of the protest stunts around the talks, according to the Associated Press.

The group is urging negotiators to support renewable energy over oil, gas and coal.

Alec Baldwin says *au revoir* to Big Oil

Other celebrities want to say *au revoir* to oil and gas, as well.

Actor and activist Alec Baldwin told the Associated Press in an interview on the sidelines of the Paris climate talks that he doesn't want to see massive U.S. job losses. But "I'd love to see a major oil company go out of business in the United States," he said.

"That would be a tremendous sign of progress," he said.

Trojan polar bear?

In other stunts surrounding the talks, Greenpeace activists have rolled a 2-story-tall mechanical polar bear into the conference venue.

"We want the bear to represent everyone hoping in the next 72 hours" for a robust climate deal, Greenpeace's Ben Stewart told the Associated Press.

The bear came to Paris after protesting outside Royal Dutch Shell PLC's headquarters during the environmental group's campaign against Arctic oil drilling.

Meat is off the table

At least one topic seems to be off the table during the Paris negotiations when it comes to cutting emissions: meat.

The livestock sector is responsible for roughly 14.5 percent of global climate emissions. But negotiators at the talks are focusing primarily on reducing carbon dioxide output from industry, rather than diet.

"This is one of the most delicate issues with climate protection, because we all have our habits, and diet is something quite holy for some people, not to be meddled with," Jo Leinen, an omnivore and a German member of the European Parliament, told Reuters.

Still, activists are pushing meat-free living as a way to cut carbon. On the sidelines of the talks, one U.S. firm is touting its "Impossible Burger," which is made entirely from plants, is intended to look and taste like beef, and produces a similar smell when grilled.

CHINA:

Nation offers perks to coal plants that meet climate regs

Published: Wednesday, December 9, 2015

Chinese government officials say setting tighter restrictions on coal-fired power plants to cut back on carbon dioxide emissions and smog blanketing Beijing will be two-pronged and will include incentives as well as fines.

For years, the government has fined noncompliant coal plants, but today it announced that it also will offer bonuses for firms that meet efficiency benchmarks, effective Jan. 1, 2016.

"It will help to cut coal use and emissions from the sector," said Lin Boqiang, an energy researcher with Xiamen University. "And some outdated facilities will be phased out that will ease the power oversupply."

Coal plants that open after Jan. 1 will get a per-kilowatt incentive on top of a basic grid tariff, while plants already in operation will receive an extra monetary per-kilowatt hour incentive that could equate to $6.5 million.

Lin said keeping tabs on hundreds of coal plants throughout the country could be problematic.

The announcement comes at a time when world leaders are meeting in Paris to discuss a global climate deal, pushing both the public and private sectors to invest in renewable energies to improve air quality (Chen/Stanway, Reuters, Dec. 9). **-- AK**

COAL:

Appeals court sees 'no clear misconduct' by EPA

Manuel Quiñones, E&E reporter

Published: Wednesday, December 9, 2015

A three-judge panel of the U.S. Court of Appeals for the 4th Circuit yesterday defended its reasons for blocking Murray Energy Corp.'s deposition of U.S. EPA Administrator Gina McCarthy.

Late last month, Judges Diana Motz, Roger Gregory and Henry Floyd reversed a West Virginia District Court ruling saying the deposition could take place (*Greenwire*, Nov. 30).

"It is well established that high-ranking government officials may not be deposed or called to testify about their reasons for taking official actions absent 'extraordinary circumstances,'" said an appeals court explanation filed yesterday.

At issue in the lawsuit is Murray's assertion that EPA failed to properly study the potential economic impacts of recent rules as required by the Clean Air Act.

U.S. District Court Judge John Preston Bailey for the Northern District of West Virginia had allowed the deposition, saying EPA statements to lawmakers and in the litigation were contradictory.

The agency has said it may not have conducted reviews with the express purpose of meeting the statute in question, but it did analyze the potential economic effect of rules.

The appeals court said, "In short, we see no contradiction in EPA's positions that would support the district court's finding of an extraordinary circumstance."

The judges added, "We see no clear misconduct in EPA's alleged failure to perform a duty that was not declared to be mandatory until the district court so declared in this case."

SCIENCE:

IPCC chairman refutes warming 'pause'

Published: Wednesday, December 9, 2015

The much-hyped global warming "pause" does not actually exist, according to the chairman of the U.N.

Intergovernmental Panel on Climate Change, and more research is needed on warming levels that could cause irreversible damage.

"There is no hiatus [in global warming]. Multiple lines of evidence suggest that the Earth is warming," said Hoesung Lee, the South Korean economics professor who has chaired the IPCC since October (*ClimateWire*, Oct. 7).

"For instance, the atmospheric concentration of CO2 is rising, sea levels have been rising and the temperature of the ocean has also been rising," he said. "The important point is we need to look at the trend, not just one year of data."

The IPCC reported that global warming had slowed to nearly a pause since 1998 in a 2013 report, even though greenhouse gas emissions had continued unabated (*ClimateWire*, Nov. 1, 2013). A National Oceanic and Atmospheric Administration report released this year, however, refuted the existence of a pause (*ClimateWire*, June 5).

"Clearly, the most dangerous impacts will be related to crossing over the tipping points," Lee said, such as when ice melt becomes irreversible (Nina Chestney, Reuters, Dec. 8). **-- BTP**

CAMPAIGN 2016:

Sanders' climate plan isn't 'good enough' -- O'Malley

Published: Wednesday, December 9, 2015

Former governor of Maryland and Democratic presidential hopeful Martin O'Malley called fellow presidential hopeful Sen. Bernie Sanders' plan to tackle climate change "not good enough" during a University of Iowa New Leadership Forum yesterday.

Sanders (I-Vt.) earlier this week released a 16-page climate report that maps out reducing U.S. emissions 40 percent by 2030 and 80 percent by 2050 (*Greenwire*, Dec. 7). Included in the plan is a carbon tax, eliminating fossil fuel subsidies and investing in renewable resources.

"I don't believe that his goals are adequate to the challenge, and I also don't believe he actually has any experience in getting these things done, and I have," O'Malley said in response to Sanders' plan.

O'Malley unveiled a plan to tackle climate change in June that calls on the country to transition to 100 percent clean energy by 2050. To achieve this, O'Malley would create a Clean Energy Jobs Corps to retrofit pre-existing infrastructure to make it more energy-efficient and require the federal fleet of 250,000 vehicles to be low or zero emissions.

Although the candidates' plans parallel in many instances, O'Malley argues that his plan is farther-reaching and that he has the experience to put words into action.

O'Malley also spoke to yesterday's crowd of about 130 people about defeating the Islamic State group, raising middle-class wages and easing student debt (Stephen Gruber-Miller, *Iowa City Press-Citizen*, Dec. 8). **-- AK**

SCIENCE:

Greenpeace sting tests researchers' funding ethics

Published: Wednesday, December 9, 2015

A Greenpeace sting operation has shown some researchers who dispute climate change science are willing to hide their sources of funding.

Two employees from the environmental activist group posed as energy company representatives and offered to pay two prominent climate change commentators to publish papers trumpeting the benefits of carbon emissions and coal. The disguised activists also requested that the payments be kept secret.

The commentators were retired Pennsylvania State University professor Frank Clemente, who agreed to write a paper on behalf of an Indonesian coal company, and Princeton University physics professor William Happer, who agreed to publish a paper for an unnamed Middle Eastern oil and gas company.

Both men acknowledged that the emails Greenpeace released yesterday showing arrangements being made were genuine, but they denied that anything improper was done. Clemente, former director of Penn State's environmental policy center, has been a prominent defender of coal in the face of its decline in popularity as a fuel source (*ClimateWire*, May 30, 2012). Happer is a founding member of the CO2 Coalition, a group of scientists who assert that more carbon dioxide in the atmosphere will help vegetation grow better (*Greenwire*, Aug. 13). Sen. Ted Cruz (R-Texas) tapped him to participate in a hearing yesterday that criticized mainstream climate science (*ClimateWire*, Dec. 9).

"It shows a way that fossil fuel money can get into funding these climate skeptic campaign groups," said Lawrence Carter, one of the Greenpeace employees involved (John Schwartz, *New York Times*, Dec. 9). **-- BTP**

AIR POLLUTION:

VW's CO2 emissions scandal may be smaller than feared

Published: Wednesday, December 9, 2015

Volkswagen AG said the number of vehicles with altered carbon dioxide levels is fewer than originally anticipated, news that increased the German carmaker's fallen shares by 5 percent today.

Last month, the company said CO2 emissions and fuel consumption figures were likely adjusted in 800,000 cars; however, VW says that number is now closer to 36,000 affected vehicles.

The carmaker already is facing the prospect of shelling out tens of billion of euros in fines for rigging diesel emissions levels, and news about altered CO2 emissions raised the possibility that the number would continue to climb.

Initial estimates show the CO2 discovery could cost the company €2 billion ($2.2 billion), although the figure won't be solidified until more information is discovered.

The company is scheduled to provide an update tomorrow at its Wolfsburg, Germany, headquarters, where it will also map out plans to offset fines it is required to pay in the wake of the scandal (Graham Ruddick, London *Guardian*, Dec. 9). **-- AK**

EPA:

Former deputy, regional chief win leadership awards

Kevin Bogardus, E&E reporter

Published: Wednesday, December 9, 2015

Two former senior U.S. EPA officials have been selected for a prestigious environmental award.

Bob Perciasepe, president of the Center for Climate and Energy Solutions and formerly the agency's longtime deputy administrator, and Mindy Lubber, president of Ceres and once a regional administrator for EPA's New England office, have won the 2016 William K. Reilly Award for Environmental Leadership, according to an announcement from last week.

The Reilly Awards are given by the Center for Environmental Policy at the American University School of Public Affairs. They are named after Bill Reilly, President George H.W. Bush's EPA administrator, and honor individuals with stellar environmental careers.

Dan Fiorino, director of the Center for Environmental Policy, said this batch of nominations was outstanding, which made the award committee's job difficult.

"Both Mindy Lubber and Bob Perciasepe exemplify the Bill Reilly model of working across political and policy divisions to achieve innovative and measurable results," Fiorino said in a statement.

Perciasepe was picked for his service in the public sector. He was EPA's No. 2 from 2009 to 2014, when the agency developed tougher auto emissions standards as well as the Waters of the U.S. rule and the Clean Power Plan. Perciasepe also has been the agency's assistant administrator for both its water and air programs.

He also held the post of chief operating officer at the National Audubon Society and worked in state and municipal government as Maryland's secretary of the environment and as a senior planning official for Baltimore.

Perciasepe left EPA and took charge of the Center for Climate and Energy Solutions in summer of last year (*Greenwire*, July 17, 2014).

Lubber earned her award for her work at Ceres, a nonprofit advocacy group that mobilizes investors and companies to adopt sustainable business practices. She has a long history in environmental causes as president of the National Environmental Law Center and as president and CEO of Green Century Capital Management, which invests in environmentally responsible mutual funds.

Lubber also served at EPA, joining the agency in 1995 as a senior policy adviser. President Clinton in 2000 named her regional administrator of EPA's New England office, where she helped manage the office's then-$450 million annual budget.

Perciasepe and Lubber will pick up the awards March 31 at American University.

RE: ***VW Emissions Violations; Notice of Intent to Sue.***

Dear Sir or Madame:

Pursuant to 42 U.S.C. § 7604(b), we write to notify you that Volkswagen AG, Audi AG, Volkswagen Group of America, Inc., Volkswagen of America, Inc., and Audi of America, Inc. (collectively "VW") are alleged to have violated the Clean Air Act ("CAA"), 42 U.S.C. §§ 7401 - 7671q, and its implementing regulations, and the motor vehicle emissions laws, regulations and orders of California, Arizona, Connecticut, Maine, Maryland, Massachusetts, New Jersey, New Mexico, New York, Oregon, Pennsylvania, Rhode Island, Vermont, and Washington by installing "defeat devices" on its emissions control systems for at least the following Volkswagen and Audi vehicles sold in the United States:

- VW Jetta TDI (Model Years 2009-15);
- VW Jetta SportWagen TDI (Model Years 2009-14);
- VW Golf TDI (Model Years 2010-15);
- VW Golf SportWagen TDI (Model Year 2015);
- VW Beetle TDI and VW Beetle Convertible TDI (Model Years 2012-15);
- VW Passat TDI (Model Years 2012-15); and
- Audi A3 TDI (Model Years 2010-15).

The defeat devices masked real world NOx emissions that exceeded emissions levels authorized by the U.S. Environmental Protection Agency limits by 10 to 40 times.

VW has widely admitted to its violation of E.P.A. and California Air Resources Board

VW FOIA, EPA 06/20/2017 2017-FFP_036726

rules and regulations (which have been adopted in 13 states), and to its deception of state and federal regulators. On October 8, 2016, VW additionally publicly announced that some or all of its SCR engines may also be non-compliant with state and federal regulations. VW executives at the highest level of the company were aware of these emissions violations and these individuals authorized concealment through the use of a sophisticated software code that understood when an engine was being subjected to an emissions test. The software then altered engine settings to allow the vehicle to pass the emissions test. Thereafter, the engine would revert to normal settings for real-world driving conditions.

The CAA makes it a violation "for any person to manufacture or sell, or offer to sell, or install, any part or component intended for use with, or as part of, any motor vehicle or motor vehicle engine, where a principal effect of the part or component is to bypass, defeat, or render inoperative any device or element of design installed on or in a motor vehicle or motor vehicle engine in compliance with regulations under this subchapter, and where the person knows or should know that such part or component is being offered for sale or installed for such use or put to such use."' CAA § 203(a)(3)(B), 42 U.S.C. § 7522(a)(3)(B); 40 C.F.R. § 86. 1854-12(a)(3)(ii). Additionally, manufacturers are prohibited from selling, offering for sale, introducing into commerce, delivering for introduction into commerce, or importing, any new motor vehicle unless that vehicle is covered by an EPA-issued Certificate of Conformity ("COC"). CAA § 203(a)(1), 42 U.S.C. § 7522(a)(1); 40 C.F.R. § 86. 1854-1 2(a)(l). It is also a violation to cause any of the foregoing acts. CAA § 203(a), 42 U.S.C. § 7522(a); 40 C.F.R. § 86-1854- 12(a).

"Vehicles are covered by a certificate of conformity only if they are in all material respects as described in the manufacturer's application for certification . . . ." 40 C.F.R. § 86.1848-1 O(c)(6). Similarly, a COC issued by EPA, including those issued to VW, state expressly, "[t]his certificate covers only those new motor vehicles or vehicle engines which conform, in all material respects, to the design specifications" described in the application for that COC. *See also* 40 C.F.R. §§ 86. 1844-01 (listing required content for COC applications), 86.1848-0 l (b) (authorizing the EPA to issue COCs on any terms that are necessary or appropriate to assure that new motor vehicles satisfy the requirements of the CAA and its regulations).

Motor vehicles equipped with defeat devices, such as those at issue here, cannot be certified. EPA, *Advisory Circular Number 24: Prohibition on use of Emission Control Defeat Device* (Dec. 11, 1972); *see also* 40 C.F.R. §§ 86-1809-01, 86- 1809-10, 86-1809-1 2. Electronic control systems which may receive inputs from multiple sensors and control multiple actuators that affect the emission control system's performance are AECDs. EPA, *Advisaty Circular*

VW FOIA, EPA 06/20/2017 2017-FFP_036727

Number 24-2: Prohibition of Emission Control Defeat Devices - Optional Objective Criteria (Dec. 6, 1978). "Such elements of design could be control system logic (i.e., computer software), and/or calibrations, and/or hardware items." *Id.*

To obtain a COC, a light-duty vehicle manufacturer must submit a COC application to the EPA for each test group of vehicles that it intends to enter into United States commerce. 40 C.F.R.
§ 86.1 843-0 1. The COC application must include, among other things, a list of all auxiliary emission control devices (AECDs) installed on the vehicles. 40 C.F.R. § 86. 1844-01 (d)(11). An AECD is "any element of design which senses temperature, vehicle speed, engine RPM, transmission gear, manifold vacuum, or any other parameter for the purpose of activating, modulating, delaying, or deactivating the operation of any part of the emission control system." 40 C.F.R. § 86. 1803-01. The COC application must also include "ajustification for each AECD, the parameters they sense and control, a detailed justification of each AECD that results in a reduction in effectiveness of the emission control system, and [a] rationale for why it is not a defeat device." 40 C. F .R. § 86. 1844-01 (d)(11). A defeat device is an AECD " that reduces the effectiveness of the emission control system under conditions which may reasonably be expected to be encountered in normal vehicle operation and use, unless: (1) Such conditions are substantially included in the Federal emission test procedure; (2) The need for the AECD is justified in terms of protecting the vehicle against damage or accident; (3) The AECD does not go beyond the requirements of engine starting; or (4) The AECD applies only for emergency vehicles . ... " 40 C.F.R. § 86. 1803-01.

Persons who violate section 203(a)(3)(B) of the CAA, 42 U.S.C. § 7522(a)(3)(B), are subject to a civil penalty of up to $3,750 for each violation that occurred on or after January 13, 2009;[1] CAA § 205(a), 42 U.S.C. § 7524(a); 40 C.F.R. § 19.4. In addition, any manufacturer who, on or after January 13, 2009, sold, offered for sale, introduced into commerce, delivered for introduction into commerce, imported, or caused any of the foregoing acts with respect to any new motor vehicle that was not covered by an EPA-issued COC is subject, among other things, to a civil penalty of up to $37,500 for each violation.[2] CAA § 205(a), 42 U.S.C. § 7524(a); 40 C.F.R. § 19.4. Additional equitable remedies to further address these alleged violations are also authorized. CAA § 204(a). 42 U.S.C. § 7523(a).

VW's certifications, which are affixed to hundreds of thousands of non-compliant vehicles are false. An exemplar of these certifications is as follows:

[1] $2.750 for violations occurring prior to January 13. 2009.
[2] $32,500 for violations occurring prior to January 13, 2009.

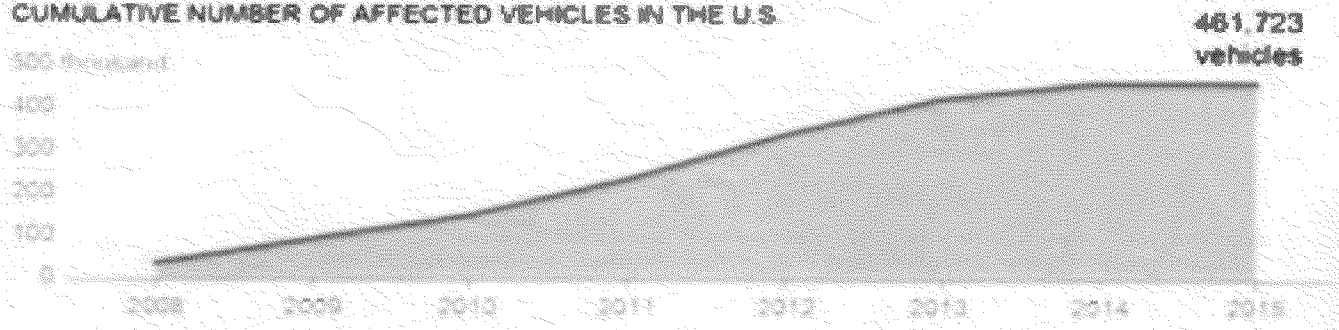
VW's conduct has contributed to significant degradation of air quality in urban environments and has been estimated to have contributed to respiratory and other health problems and death of dozens of people in the United States over the last seven years. On October 3, Associated Press ("AP") laid out the facts in the chart that follows:

VW FOIA, EPA 06/20/2017 2017-FFP_036730

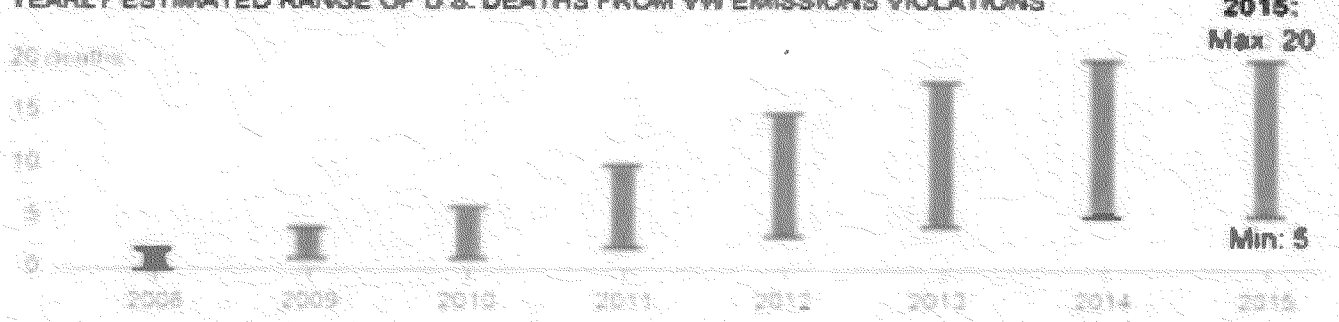
Calculating human toll of VW emissions problems

U.S. pollution resulting from Volkswagen's dodging of emissions tests is enough to have caused dozens of deaths since 2008. An AP analysis calculated upper and lower limits of pollution using the number of affected vehicles each year and average mileage. Scientists used that data in epidemiological computer models to estimate a range of deaths.

CUMULATIVE NUMBER OF AFFECTED VEHICLES IN THE U.S.

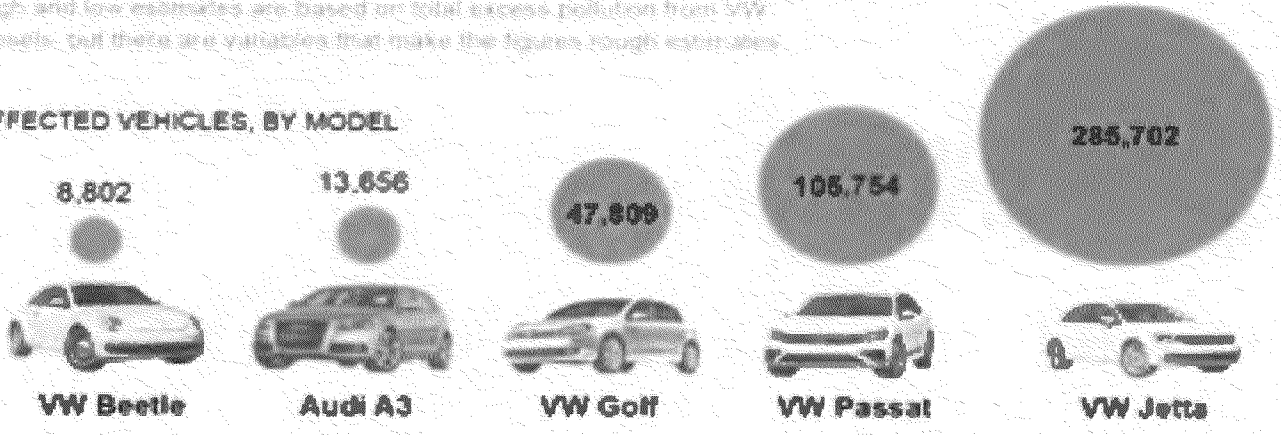


YEARLY ESTIMATED RANGE OF U.S. DEATHS FROM VW EMISSIONS VIOLATIONS



High and low estimates are based on total excess pollution from VW diesels, but there are variables that make the figures rough estimates.

AFFECTED VEHICLES, BY MODEL



NOTE: The total of 47,809 for VW Golf includes 2,510 VW Golf SportWagen vehicles. The total figure of 461,723 is derived from Kelley Blue Book vehicle registration data. The Environmental Protection Agency puts the total number of affected vehicles in the U.S. to be about 482,000.

SOURCES: AP analysis of data from the U.S. Environmental Protection Agency and Kelley Blue Book; AP Graphics Editor Adams Carrington; Mother Jones; Volkswagen Audi

VW FOIA, EPA 06/20/2017 2017-FFP_036731

As the AP article notes, the Class Vehicles released enough NOx over the course of seven years to significantly degrade the environment in urban areas.

The full name and contact of the parties giving notice are as follows: Maria Bourn, David Watson, Stephen Verner, Mark Schumacher and the Center for Auto Safety, each of whom may be contacted through their counsel, Hausfeld LLP, 600 Montgomery Street, 32nd Floor, San Francisco, CA 94111 (Tel.: 415-633-1908).

The parties give you notice of their intent to sue the VW entities identified above pursuant to 42 U.S.C. § 7604(a)(1) sixty days following the date of this notice in the United States District Court for the Eastern District of Virginia. Notice is deemed given on the postmark date. See 40 C.F.R. § 54.2(d)

If you believe that any portion of this notice is provided in error, or if you wish to discuss any portion of this notice, please do not hesitate to contact me.

Very truly yours,

Christopher L. Lebsock

Re: Notice of Clean Air Act Violations Pursuant to 42 U.S.C. § 7604(b)(1)(A)

Ladies and Gentlemen,

We represent Rich Hill, Elvis Foster, Robert Nesbitt, Joe Howbert, Callum Dorey, Don Cunningham, Angelyen Wood, Marcia Andru Moshe, Edmund Steppan, Mireya Perez, Kristen Van de Biezenbos, Ann Marie Stief, William Stief, Thomas C. Jorgensen, Kartik Pillutla, Kathryn Sue Vordenberg, Michael Brown, Carol Spindel, Jason Welch, Thomas Bassett, Joshua R. Geller, Michelle Geller, Fred M. Flores, Gary Butterwei, Terri Butterwei, Thomas Michael Carran, Michael Fuerstein, Grant Garcia, Howard Katz, Timothy P. Yerkes, Beth Glassman, Stephanie Waddoups, Mary Jones, Diego Alberto Diaz, Michael Santos, Mark Pomerantz, and Tiffany Ford, individually and on behalf of all others similarly situated (collectively, "Plaintiffs"), and write to provide notice of violations of the Clean Air Act ("CAA") by Volkswagen AG, Audi AG, Porsche AG, Volkswagen Group of America, Inc., and Porsche Cars North America, Inc., (collectively, "VW") to the Administrator of the EPA, to the States in which the violation occurs (in this case, all fifty States and the District of Columbia), and to the alleged violators of the CAA. This is notice is pursuant to 42 U.S.C. § 7604(b)(1)(A), and is made 60 days before Plaintiffs commence a civil action against VW to enforce the applicable emission standards or limitations and to recover civil penalties, costs of litigation (including reasonable attorney and expert witness fees), and all other relief that is proper in citizen suits under the CAA.

The allegations in this notice are based on the Notices of Violation issued by the United States Environmental Protection Agency ("EPA") on September 18, 2015 and November 2, 2015. As stated therein, the EPA has investigated and continues to investigate Volkswagen AG, Audi AG, Porsche AG, Volkswagen Group of America, Inc., and Porsche Cars North America, Inc., (collectively, "VW") for compliance with the CAA, 42 U.S.C. §§ 7401-7671q, and its implementing regulations. The EPA has determined that VW manufactured and installed defeat devices in certain model year 2009 through 2015 diesel light-duty vehicles equipped with 2.0 liter engines, and certain model year 2014 through 2016 diesel light-duty vehicles equipped with 3.0 liter engines. These defeat devices bypass, defeat, or render inoperative elements of the vehicles' emission control system that exist to comply with CAA emission standards. Therefore, VW violated section 203(a)(3)(B) of the CAA, 42 U.S.C. § 7522(a)(3)(B). Additionally, the EPA has determined that, due to the existence of the defeat devices in these vehicles, these vehicles do not conform in all material respects to the vehicle specifications described in the applications for the certificates of conformity that

VW FOIA, EPA 06/20/2017 2017-FFP_036734

purportedly cover them. Therefore, VW also violated section 203(a)(l) of the CAA, 42 U.S.C. § 7522(a)(l), by selling, offering for sale, introducing into commerce, delivering for introduction into commerce, or importing these vehicles, or for causing any of the foregoing acts.

Law Governing Alleged Violations

This notice arises under Part A of Title II of the CAA, 42 U.S.C. §§ 7521-7554, and the regulations promulgated thereunder. In creating the CAA, Congress found, in part, that "the increasing use of motor vehicles . . . has resulted in mounting dangers to the public health and welfare." CAA § 101(a)(2), 42 U.S.C. § 7401(a)(2). Congress' purpose in creating the CAA, in part, was "to protect and enhance the quality of the Nation's air resources so as to promote the public health and welfare and the productive capacity of its population," and "to initiate and accelerate a national research and development program to achieve the prevention and control of air pollution." CAA § 101(b)(l)-(2), 42 U.S.C. § 740 l (b)(l)-(2). The CAA and the regulations promulgated thereunder aim to protect human health and the environment by reducing emissions of nitrogen oxides (NOx) and other pollutants from mobile sources of air pollution. Nitrogen oxides are a family of highly reactive gases that play a major role in the atmospheric reactions with volatile organic compounds (VOCs) that produce ozone (smog) on hot summer days. Breathing ozone can trigger a variety of health problems including chest pain, coughing, throat irritation, and congestion. Breathing ozone can also worsen bronchitis, emphysema, and asthma. Children are at greatest risk of experiencing negative health impacts from exposure to ozone.

The allegations here concern light-duty motor vehicles for which 40 C.F.R. Part 86 sets emission standards and test procedures and section 203 of the CAA, 42 U.S.C. § 7522, sets compliance provisions. Light-duty vehicles must satisfy emission standards for certain air pollutants, including NOx. 40 C.F.R. § 86.1811-04. The EPA administers a certification program to ensure that every vehicle introduced into United States commerce satisfies applicable emission standards. Under this program, the EPA issues certificates of conformity (COCs), and thereby approves the introduction of vehicles into United States commerce.

To obtain a COC, a light-duty vehicle manufacturer must submit a COC application to the EPA for each test group of vehicles that it intends to enter into United States commerce. 40 C.F.R. § 86.1843-01. The COC application must include, among other things, a list of all auxiliary emission control devices (AECDs) installed on the vehicles. 40 C.F.R. § 86.1844-0l(d)(11). An AECD is "any element of design which senses temperature, vehicle speed, engine RPM, transmission gear, manifold vacuum, or any other parameter for the purpose of

VW FOIA, EPA 06/20/2017 2017-FFP_036735

activating, modulating, delaying, or deactivating the operation of any part of the emission control system." 40 C.F.R. § 86.1803-01. The COC application must also include "a justification for each AECD, the parameters they sense and control, a detailed justification of each AECD that results in a reduction in effectiveness of the emission control system, and [a] rationale for why it is not a defeat device." 40 C.F.R. § 86.1844-01(d)(11).

A defeat device is an AECD that reduces the effectiveness of the emission control system under conditions which may reasonably be expected to be encountered in normal vehicle operation and use, unless: (1) such conditions are substantially included in the Federal emission test procedure; (2) the need for the AECD is justified in terms of protecting the vehicle against damage or accident; (3) the AECD does not go beyond the requirements of engine starting; or (4) The AECD applies only for emergency vehicles . . . ." 40 C.F.R. § 86.1803-01.

Motor vehicles equipped with defeat devices, such as those at issue here, cannot be certified. EPA, *Advisory Circular Number 24: Prohibition on use of Emission Control Defeat Device* (Dec. 11, 1972); *see also* 40 C.F.R. §§ 86-1809-01, 86-1809-10, 86-1809-12. Electronic control systems which may receive inputs from multiple sensors and control multiple actuators that affect the emission control systems performance are AECDs. EPA, *Advisory Circular Number 24-2: Prohibition of Emission Control Defeat Devices - Optional Objective Criteria* (Dec. 6, 1978). "Such elements of design could be control system logic (i.e., computer software), and/or calibrations, and/or hardware items." *Id.*

"Vehicles are covered by a certificate of conformity only if they are in all material respects as described in the manufacturer's application for certification . . . ." 40 C.F.R. § 86.1848-10(c)(6). Similarly, a COC issued by EPA, including those issued to VW, state expressly, "[t]his certificate covers only those new motor vehicles or vehicle engines which conform, in all material respects, to the design specifications" described in the application for that COC. *See also* 40 C.F.R. §§ 86.1844-01 (listing required content for COC applications), 86.1848-01(b) (authorizing the EPA to issue COCs on any terms that are necessary or appropriate to assure that new motor vehicles satisfy the requirements of the CAA and its regulations).

The CAA makes it a violation "for any person to manufacture or sell, or offer to sell, or install, any part or component intended for use with, or as part of, any motor vehicle or motor vehicle engine, where a principal effect of the part or component is to bypass, defeat, or render inoperative any device or element of design installed on or in a motor vehicle or motor vehicle engine in compliance with regulations under this subchapter, and where the person knows or should

VW FOIA, EPA 06/20/2017 2017-FFP_036736

know that such part or component is being offered for sale or installed for such use or put to such use."' CAA § 203(a)(3)(B), 42 U.S.C. § 7522(a)(3)(B); 40 C.F.R. § 86. 1854-12(a)(3)(ii). Additionally, manufacturers are prohibited from selling, offering for sale, introducing into commerce, delivering for introduction into commerce, or importing, any new motor vehicle unless that vehicle is covered by an EPA-issued COC. CAA § 203(a)(l), 42 U.S.C. § 7522(a)(l); 40 C.F.R. § 86.1854-1 2(a)(l). It is also a violation to cause any of the foregoing acts. CAA § 203(a), 42 U.S.C. § 7522(a); 40 C.F.R. § 86-1854-12(a).

2.0 Liter Diesel Engines

Each VW vehicle identified by the table below has AECDs that were not described in the application for the COC that purportedly covers the vehicle. Specifically, VW manufactured and installed software in the electronic control module (ECM) of these vehicles that sensed when the vehicle was being tested for compliance with EPA emission standards. The EPA calls this the "switch." The "switch" senses whether the vehicle is being tested or not based on various inputs including the position of the steering wheel, vehicle speed, the duration of the engine's operation, and barometric pressure. These inputs precisely track the parameters of the federal test procedure used for emission testing for EPA certification purposes. During EPA emission testing, the vehicles' ECM ran software which produced compliant emission results under an ECM calibration that VW referred to as the "dyno calibration" (referring to the equipment used in emissions testing, called a dynamometer). At all other times during normal vehicle operation, the "switch", was activated and the vehicle ECM software ran a separate "road calibration" which reduced the effectiveness of the emission control system (specifically the selective catalytic reduction or the lean Ox trap). As a result, emissions of Ox increased by a factor of 10 to 40 times above the EPA compliant levels, depending on the type of drive cycle (e.g., city, highway).

The California Air Resources Board (CARB) and the EPA were alerted to emissions problems with these vehicles in May 2014 when the West Virginia University's (WVU) Center for Alternative Fuels, Engines & Emissions published results of a study commissioned by the International Council on Clean Transportation that found significantly higher in-use emissions from two light duty diesel vehicles (a 2012 Jetta and a 2013 Passat). Over the course of the year following the publication of the WVU study, VW continued to assert to CARB and the EPA that the increased emissions from these vehicles could be attributed to various technical issues and unexpected in-use conditions. VW issued a voluntary recall in December 2014 to address the issue. CARB, in coordination with the EPA, conducted follow up testing of these vehicles both in the laboratory and during normal road operation to confirm the efficacy of the recall. When the

VW FOIA, EPA 06/20/2017 2017-FFP_036737

testing showed only a limited benefit to the recall, CARB broadened the testing to pinpoint the exact technical nature of the vehicles' poor performance, and to investigate why the vehicles' on board diagnostic system was not detecting the increased emissions. None of the potential technical issues suggested by VW explained the higher test results consistently confirmed during CARB's testing. It became clear that CARB and the EPA would not approve certificates of conformity for VW's 2016 model year diesel vehicles until VW could adequately explain the anomalous emissions and ensure the agencies that the 20 16 model year vehicles would not have similar issues. Only then did VW admit it had designed and installed a defeat device in these vehicles in the form of a sophisticated software algorithm that detected when a vehicle was undergoing emissions testing.

VW knew or should have known that its "road calibration" and "switch" together bypass, defeat, or render inoperative elements of the vehicle design related to compliance with the CAA emission standards. This is apparent given the design of these defeat devices. As described above, the software was designed to track the parameters of the federal test procedure and cause emission control systems to underperform when the software determined that the vehicle was not undergoing the federal test procedure.

VW's "road calibration" and "switch" are AECDs that were neither described nor justified in the applicable COC applications, and are illegal defeat devices. Therefore each vehicle identified by the table below does not conform in a material respect to the vehicle specifications described in the COC application. As such, VW violated section 203(a)(l) of the CAA, 42 U.S.C. § 7522(a)(l), each time it sold, offered for sale, introduced into commerce, de livered for introduction into commerce, or imported (or caused any of the foregoing with respect to) one of the hundreds of thousands of new motor vehicles within these test groups. Additionally, VW violated section 203(a)(3)(B) of the CAA, 42 U.S.C. § 7522(a)(3)(B), each time it manufactured and installed into these vehicles an ECM equipped with the "switch" and " road calibration."

The vehicles are identified by the table below. All vehicles are equipped with 2.0 liter diesel engines.

Model Year	EPA Test Group	Make and Model(s)
2009	9VWXV02.035N	VW Jetta, VW Jetta Sportwagen
2009	9VWXV02.0U5N	VW Jetta, VW Jetta Sportwagen
2010	AVWXV02.0U5N	VW Golf, VW Jetta, VW Jetta Sportwagen,

VW FOIA, EPA 06/20/2017 2017-FFP_036738

		Audi A3
2011	BVWXV02.0U5N	VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2012	CVWXV02.0U5N	VW Beetle, VW Beetle Convertible, VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2012	CVWXV02.0U4S	VW Passat
2013	DVWXV02.0U5N	VW Beetle, VW Beetle Convertible, VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2013	DVWXV02.0U4S	VW Passat
2014	EVWXV02.0U5N	VW Beetle, VW Beetle Convertible, VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2014	EVWXV02.0U4S	VW Passat
2015	FVGA V02.0VAL	VW Beetle, VW Beetle Convertible, VW Golf, VW Golf Sportwagen, VW Jetta, VW Passat, Audi A3

3.0 Liter Diesel Engines

Each VW vehicle identified by the table below has AECDs that were not described in the application for the COC that purportedly covers the vehicle. Specifically, VW manufactured and installed software in the electronic control module (ECM) of each vehicle that causes the vehicle to perform differently when the vehicle is being tested for compliance with EPA emission standards than in normal operation and use.

When this software determines the vehicle has begun the FTP 75 Federal emission test procedure, it directs the vehicle to employ a low NOx temperature conditioning mode. A status bit in the software indicates that a "temperature conditioning" mode is active. In this low NOx temperature conditioning mode, the vehicle operates under a number of emission control parameters, including injection timing, exhaust gas recirculation rate, and common rail fuel pressure in such a way that the parameters yield low engine-out NOx emissions and high exhaust temperatures. The high exhaust temperatures heat the selective catalytic reduction system ("catalyst") and improve the catalyst's ability to reduce tailpipe NOx emissions. In this low NOx temperature conditioning mode, the combination of low engine-out NOx and improved catalyst performance results in tailpipe NOx emissions that are below the applicable emissions standard.

VW FOIA, EPA 06/20/2017 2017-FFP_036739

However, the software employs a "timer" that coincides with the low NOx temperature conditioning mode. At exactly one second after the completion of the initial phases of the FTP 75 Federal emissions test procedure (1,370 seconds, which is when the vehicle would normally be turned off), this software directs the vehicle to cease low NOx temperature conditioning mode. The "temperature conditioning" status bit switches to zero, and a second status bit indicates the activation of "transition to normal mode." In this "normal mode," the emission control system is immediately less effective. Compared to the low NOx temperature conditioning mode, the vehicle employs a different injection timing, exhaust gas recirculation rate, and common rail fuel pressure. This yields higher levels of NOx from the engine and reduced exhaust temperatures.

In addition, when the vehicle starts under conditions that the software determines *are not* the beginning of the FTP 75 Federal emission test procedure, the vehicle does not use the low NOx temperature conditioning mode at all. Instead, the emission control parameters are set consistent with the "normal mode." In sum, as soon as the vehicle senses that it is not being tested, it uses "normal mode." In "normal mode," tailpipe emissions of NOx are up to 9 times the applicable NOx standard levels, depending on model type and type of drive cycle (e.g., city, highway).

This notice is based on vehicle emission testing performed by the EPA's National Vehicle and Fuel Emissions Laboratory, California Air Resources Board's Hagen-Smit Laboratory, and Environment Canada's River Road Laboratory. This testing was performed since EPA's announcement on September 25, 2015, that it would perform additional testing "using driving cycles and conditions that may reasonably be expected to be encountered in normal operation and use, for the purposes of investigating a potential defeat device." EPA, *EPA Conducted Confirmatory Testing* (Sept. 25, 2015).

VW knew or should have known that the software described above bypasses, defeats, or renders inoperative elements of the vehicle design related to compliance with the CAA emission standards. This is apparent given the design of these defeat devices. As described above, the software was designed to track federal test procedures and cause emission control systems to underperform when the software determined that the vehicle was not being tested.

VW's software described above includes one or more AECDs that were neither described nor justified in the applicable COC applications, and are illegal defeat devices. Therefore each vehicle identified by the table below does not conform in a material respect to the vehicle specifications described in the COC application. As such, VW violated section 203(a)(1) of the CAA, 42 U.S.C. § 7522(a)(1), each

VW FOIA, EPA 06/20/2017 2017-FFP_036740

time it sold, offered for sale, introduced into commerce, delivered for introduction into commerce, or imported (or caused any of the foregoing with respect to) one of the new motor vehicles within these test groups. Additionally, VW violated section 203(a)(3)(B) of the CAA, 42 U.S.C. § 7522(a)(3)(B), each time it manufactured and installed into these vehicles an ECM equipped with the software described above. The vehicles are identified by the table below. All vehicles are equipped with 3.0 liter diesel engines.

Model Year	EPA Test Group	Make and Model(s)
2014	EADXT03.02UG	VW Touareg
2015	FPRXT03.0CDD	Porsche Cayenne
2016	GVGAJ03.0NU4	Audi A6 Quattro, A 7 Quattro, A8, A8L, and Q5

Citizen Enforcement

The investigation into this matter is continuing. The above tables represent specific violations that the EPA and Plaintiffs believe, at this point, are sufficiently supported by evidence to warrant the allegations in this notice. The EPA and Plaintiffs may find additional violations as the investigation continues, including violations related to carbon dioxide emissions from diesel and gasoline-power VW vehicles, as indicated by VW's public announcement on November 3, 2015.

Not less than 60 days following this notice, Plaintiffs may commence a civil action pursuant to 42 U.S.C. §7604, which provides that the district courts of the United States have jurisdiction to enforce emission standards or limitations, to apply any appropriate civil penalties, and to award costs of litigation (including reasonable attorney and expert witness fees) to any party.

Sincerely,

Robert S. Safi

Subject: Mueller Comments

Be careful, VW, of stopping saying sorry

Brooke Masters, Companies editor

December 11, 2015 4:39 pm

Volkswagen's new chief executive Matthias Müller used his first big press conference this week to strike an assertive tone.

Asked how he planned to deal with the US regulators who have charged that the German carmaker cheated on emissions tests, he said, "I don't think I will get down on my knees, I will be self-confident. Of course, I will apologise for things that have occurred." At another point, he proclaimed: "The future at VW belongs to the brave."

The event, conducted entirely in German in Volkswagen's home town of Wolfsburg, appeared designed to give the impression that the world's second-largest carmaker is drawing a line under the scandal. Although cheating software was installed in more than 11m vehicles worldwide, VW says it is working on cheap fixes for most of them. The company's share price, which dropped more than 40 per cent in September and October, has now recovered more than half of those losses.

But Mr Müller needs to be careful. At this stage, tone is everything. Former BP chief executive Tony Hayward learned the hard way the perils of being perceived as moving on too quickly. Back in May 2010, BP was struggling to contain the Deepwater Horizon oil spill, which killed 11 people and wreaked havoc on the US's gulf coast. While touring the clean up site, Mr Hayward imprudently complained to reporters, "No one wants this over more than I do, I'd like my life back". By July, he was out of a job.

Similarly, in 2011, Bob Diamond, then chief executive of Barclays, tempted fate by telling a UK parliamentary committee to stop being so obsessed with the financial crisis. "There was a period of remorse and apology; that period needs to be over," he insisted. In the following year, Barclays became the first bank to settle in the global Libor scandal. As public outrage mounted over traders who rigged lending rates for bottles of champagne, UK banking regulators stepped in, and Mr Diamond was the one whose time was over.

Their bold media strategies reminded me of a theory proposed by one of my history professors, about the role of the telegraph and railroad in sparking the US civil war. For generations, politicians in far-flung states such as Georgia had run for office promising to do battle with those nasty Yankees, and then gone off Washington to work happily with their Northern counterparts. News of what they were doing would take weeks, or months, to trickle back to their constituents.

Instantaneous communication and rapid transport made it harder to say different things to different audiences — setting the US on the road to war.

Mr Müller has a similar problem. VW's workers may be happy, even eager, to draw a line under the mess and get back to building cars. They are likely to have listened eagerly as he promised a new plan to build more electric vehicles.

But the VW chief has another audience to worry about: regulators, who are far from finished with VW. The US Environmental Protection Agency still has two open cases against the carmaker and is already unhappy that VW brushed back questions about excess nitrogen oxide emissions for more than a year. The carmaker came clean only after the EPA refused to certify its latest models for sale in the US. The EPA will want reassurance that this cannot happen again.

A successful VW recovery is likely to require a bit more apology and a bit less bravery than we have seen so far.

Volkswagen's new chief executive Matthias Müller used his first big press conference this week to strike an assertive tone.

Asked how he planned to deal with the US regulators who have charged that the German carmaker cheated on emissions tests, he said, "I don't think I will get down on my knees, I will be self-confident. Of course, I will apologise for things that have occurred." At another point, he proclaimed: "The future at VW belongs to the brave."

The event, conducted entirely in German in Volkswagen's home town of Wolfsburg, appeared designed to give the impression that the world's second-largest carmaker is drawing a line under the scandal. Although cheating software was installed in more than 11m vehicles worldwide, VW says it is working on cheap fixes for most of them. The company's share price, which dropped more than 40 per cent in September and October, has now recovered more than half of those losses.

But Mr Müller needs to be careful. At this stage, tone is everything. Former BP chief executive Tony Hayward learned the hard way the perils of being perceived as moving on too quickly. Back in May 2010, BP was struggling to contain the Deepwater Horizon oil spill, which killed 11 people and wreaked havoc on the US's gulf coast. While touring the clean up site, Mr Hayward imprudently complained to reporters, "No one wants this over more than I do, I'd like my life back". By July, he was out of a job.

Similarly, in 2011, Bob Diamond, then chief executive of Barclays, tempted fate by telling a UK parliamentary committee to stop being so obsessed with the financial crisis. "There was a period of remorse and apology; that period needs to be over," he insisted. In the following year, Barclays became the first bank to settle in the global Libor scandal. As public outrage mounted over traders who rigged lending rates for bottles of champagne, UK banking regulators stepped in, and Mr Diamond was the one whose time was over.

Their bold media strategies reminded me of a theory proposed by one of my history professors, about the role of the telegraph and railroad in sparking the US civil war. For generations, politicians in far-flung states such as Georgia had run for office promising to do battle with those nasty Yankees, and then gone off Washington to work happily with their Northern counterparts. News of what they were doing would take weeks, or months, to trickle back to their constituents.

Instantaneous communication and rapid transport made it harder to say different things to different audiences — setting the US on the road to war.

Mr Müller has a similar problem. VW's workers may be happy, even eager, to draw a line under the mess and get back to building cars. They are likely to have listened eagerly as he promised a new plan to build more electric vehicles.

But the VW chief has another audience to worry about: regulators, who are far from finished with VW. The US Environmental Protection Agency still has two open cases against the carmaker and is already unhappy that VW brushed back questions about excess nitrogen oxide emissions for more than a year. The carmaker came clean only after the EPA refused to certify its latest models for sale in the US. The EPA will want reassurance that this cannot happen again.

A successful VW recovery is likely to require a bit more apology and a bit less bravery than we have seen so far.

Thank you, Chris,

This will help with delivering the right advice.

Best regards,

David

Working Paper No. WLTP-13-01-e
(13th WLTP IG Meeting, 11 - 12 January 2016)

INVITATION TO THE 13th MEETING OF THE GRPE INFORMAL WORKING GROUP ON WORLDWIDE HARMONIZED LIGHT VEHICLES TEST PROCEDURES (WLTP)

This is to inform you that the 13th informal working group meeting on WLTP will take place in Geneva, Switzerland, and is scheduled for 1 ½ days as follows:

Date: 11. January 2016
Time: 14:30 – 17:30
Location: Palais des Nations, Room XII

Date: 12 January 2016
Time: 9:30 – 12.30 14.30 – 17.30
Location: Palais des Nations, Room XII

Please give a feedback to WLTP IWG leading team if you will attend the meeting.

Delegates are kindly requested to register online with the new registration system on the UNECE website:
(https://www2.unece.org/uncdb/logon.faces?meeting_name=GRPE%2072st%20session,%2011-15%20January%202016)

Upon arrival at the Palais des Nations, delegates should obtain an identification badge at the UNOG Security and Safety Section, located at the Pregny Gate (14, Avenue de la Paix).

In case of difficulty, please contact the secretariat by telephone (ext. 74323).
For a map of the Palais des Nations and other useful information, please go to: www.unece.org/meetings/practical.htm.
Agenda and working documents for the meeting will be uploaded to the UN webpage prior to the meeting:

https://www2.unece.org/wiki/display/trans/WLTP+13th+session

On behalf of the Chair of WLTP IWG Stephan Redmann

HAUT-Q7A_12-8-15.pdf

Good morning Bill,

Please find enclosed, the Subject information. If you have any questions or concerns, please contact me.

There were problems with inputting the Evap test into Verify. They have been corrected and the Evap should be going to Verify now.

The total Evap value (UNOFFICIAL!) was 0.354498.

Thank you,

Vince Mazaitis

Subject: Inquiry Regarding Citizen Suit

Mr. Cooke,

Lee Cook let me know of your inquiry about the Center for Auto Safety's prospective citizen suit. Any questions about this or any matters concerning litigation in this matter are best directed to Josh Van Eaton at the Department of Justice (or me if it's somehow an EPA-specific inquiry). Further, Josh and I would want to ensure VW's counsel is involved as appropriate.

Subject: Agenda for IWG WLTP meeting #13 in Geneva 11-12-01.2016
WLTP-13-02e - 15122015_Agenda_Draft_rev2.doc

Dear members of IWG WLTP

on behalf of the chair I send you the draft agenda for the 13th meeting of IWG WLTP.

Upload to UN/ECE server will follow soon.

K. Kolesa

Technical secretary IWG WLTP

With best regards

Konrad Kolesa
Executive Manager

Emission Certification and Vehicle Test Benches

WLTP-13-02e

A G E N D A

of the 13th WLTP IWG Meeting

Location:	Geneva, Suisse
	Palais de Nations Room XII
Date & Time:	January 11th –12th 2016
	14:30 – 17:30, 9:30 – 17:30

1. Welcome & organization

2. Adoption of agenda & minutes

- Minutes 12th IWG WLTP meeting (WLTP-12-33e)

3. Review of Open Issues Table Phase 1B

- OIT update since 12th IWG meeting (WLTP-13-xyz) by **N. Ichikawa**
- Summary of the remaining issues from Phase 1b and transfer to Phase 2 item list (WLTP-13-xyz) by **N. Ichikawa**.

4. GTR - GRPE working document (GRPE/2016/3)

- Overview on GTR development

  - Progress report by Drafting Coordinator, **S. Dubuc** (WLTP-13-xyz)

  - Introduction of main changes to GTR No 15

  - Review of Changes since Finalization of GTR 15 Phase 1B

- GTR Part A

  - Brief oral introduction of changes to GTR No 15 by Technical GTR Sponsors (**Japan**, **EC**)

VW FOIA, EPA 06/20/2017 2017-FFP_036780

5. GTR - GRPE Informal document (GRPE-72-xyz)

(amendments /corrections to GRPE working document)

- Proposal (WLTP-13-xyz) on editorial amendments by **B. Coleman** (OICA)
- Discussion and **adoption**

6. Technical report to GTR No 15 (GRPE-72-xyz)

- Introduction of amendments to Technical report by **I. Riemersma** on behalf of EU Commission (WLTP-13-xyz)

7. Round Robin Exercises

- Reports on the European and Asian exercise by **C. Vallaude** and **Haniu-san** (WLTP-13-xyz / -xyz)

8. WLTP Phase 2

- Introduction of mandate document (WP.29-167-29) by **EC** / **Japan**
- Organization of phase 2 (WLTP-13-xyz)
- Discussion of Working Areas and Roadmap (WLTP-13-xyz)
- Working issues to be decided upon – Requests of Contracting Parties
- Separation/overlap of WLTP & EVE issues.
  - EVE status report by **EVE IWG**
- Taskforce proposal (WLTP-13-xyz)

9. Meeting schedule

- 14th WLTP IWG Meeting, March/April 2016, date & location TBD

10. AoB

Stephan Redmann

VW_DisclosureLetter_To_CommerceCommittee_Final 12162015.pdf

Mr. Geanacopoulos,

Attached please find notification of EPA's intention to provide the Honorable Fred Upton, Chairman of the Committee on Energy and Commerce in the United States House of Representatives VW's Confidential Business Information (CBI) versions of the full applications for certification submitted for each of the affected test groups. A copy of this letter has also been mailed to you.

Sincerely,

Sara Zaremski

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
NATIONAL VEHICLE AND FUEL EMISSIONS LABORATORY
2565 PLYMOUTH ROAD
ANN ARBOR, MICHIGAN 48105-2498

OFFICE OF
AIR AND RADIATION

December 16, 2015

Mr. David Geanacopoulos
Executive Vice President
General Counsel & Secretary, Government Affairs
Volkswagen Group of America
2200 Ferdinand Porsche Drive
Herndon, VA 20171

Dear Mr. Geanacopoulos:

On September 29, 2015, the Environmental Protection Agency (EPA) received a letter from the Honorable Fred Upton, Chairman of the Committee on Energy and Commerce in the United States House of Representatives, requesting information relating to their investigation of "the facts and circumstances surrounding VW's use of software in vehicle emissions control systems to affect Clean Air Act related compliance and emissions test results…."

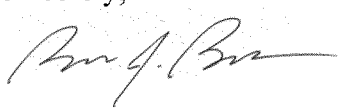
Included in this letter was a specific request for "A detailed description of all testing EPA requires and reviews prior to granting a certificate of conformity, EPA's process of evaluating this information, and what review or testing is conducted by EPA, or on its behalf, to validate information provided by manufacturers." EPA intends to provide the Committee with VW's Confidential Business Information (CBI) versions of the full applications for certification submitted for each of the affected test groups.

Although the applications were labeled as CBI by VW, pursuant to 40 CFR 2.209 (a), "[i]nformation which…is not available to the public may nonetheless be disclosed to the persons, and in the circumstances, described by paragraphs (b) through (g) of this section." Paragraph (b) of this section, 2.209(b)(1), states that "[u]pon receipt of a written request by the Speaker of the House, President of the Senate, chairman of a committee or subcommittee, or the Comptroller General, as appropriate, EPA will disclose business information to either House of Congress, to a committee or subcommittee of Congress, or to the Comptroller General…."

Additionally, 2.209(b)(2) states in part that "[i]f the request is for business information claimed as confidential or determined to be confidential, the EPA office processing the request shall provide notice to each affected business of the type of information disclosed and to whom it is disclosed. Notice shall be given at least ten days prior to disclosure, except where it is not

possible to provide notice ten days in advance of any date established by the requesting body for responding to the request." This letter serves as the required notice to VW of EPA's intent to disclose the aforementioned CBI to the Committee on Energy and Commerce. EPA intends on disclosing this information on or about December 28, 2015.

Sincerely,



Byron Bunker
Director, Compliance Division
Office of Transportation and Air Quality
Office of Air and Radiation
U.S. Environmental Protection Agency

May 27, 1998 VPCD-98-08 (LDV/LDT/SM/ICI)

Dear Manufacturer:

SUBJECT: Reminder to Include in the Application for Certification a Description of AECDs Which May Reduce the Effectiveness of the Emission Control System

The purpose of this letter is to remind manufacturers to include certain types of calibration information and statements of compliance in their application for certification.

Additionally, to make more efficient use of our resources, we request that manufacturers submit certificate requests approximately 30 to 60 days prior to the time when the certificate is needed. The certificate request should include all the necessary information needed for EPA to issue a certificate of conformity, including the complete application for certification; a copy of the fee filing form, OBD approval letters; test results; an error-free EPA summary sheet; and other supporting information as needed.

Information Currently Required by §86.094-21(b)(1)(i)

The provisions of 40 CFR 86.094-21(b)(1)(i) require that each application for certification include 1) a detailed description of each Auxiliary Emission Control Device[1] (AECD), 2) a detailed justification of each AECD which results in a reduction in the effectiveness of the emission control system; and 3) a statement of compliance that the engine family is designed within the intermediate temperature cold testing defeat device guidance provided in §86.094-16. The detailed description of the AECD should include parameters sensed and controlled, and the expected effect the AECD has on emissions (both on- and off-cycle). All AECDs that reduce the effectiveness of the emission control system and therefore require a justification include "lean-on-cruise" and "air-conditioner-on" strategies. This information should be supplied in a form that can be easily understood by an engineer skilled in automotive emissions control, e.g. not in computer language.

[1] §86.082-2 defines an AECD to mean "any element of design which senses temperature, vehicle speed, engine RPM, transmission gear, manifold vacuum, or any other parameter for the purpose of activating, modulating, delaying, or deactivating the operation of any part of the emission control system." Vehicle computer control strategies are thus considered to be AECDs.

Additionally, we request that large volume manufacturers include a defeat device statement in their application for certification, if possible, similar to the statement required of small volume manufacturers in 40 CFR 86.094-14(c)(11)(ii)(D)(3)); although such a statement is not actually required by regulation.

SFTP Information Required by §86.1708-99 and §86.1709-99

The provisions of §86.1708-99(e)(3)&(4) and §86.1709-99(e)(3)&(4) specifically require manufacturers to submit information related to any "air conditioner-on" and "lean-on-cruise" calibrations. These requirements will apply beginning in model year 2001, to manufacturers who have opted in to the National Low Emissions Vehicle (NLEV) program, for engine families certified to the NLEV Supplemental Federal Test Procedure (SFTP) emission standards.

EPA would like to meet with individual manufacturers to review the appropriateness of their SFTP emission control strategy prior to certification. Please contact your certification representative to schedule a meeting. We request that manufacturers supply an advance copy of the material that will be presented, approximately one or two weeks prior to the meeting, so that we can prepare for the meeting.

If you have any questions about this letter, please contact your certification team representative.

Sincerely,

Jane Armstrong, Director
Vehicle Programs and Compliance Division
Office of Mobile Sources

WTF.docx

Hi Bill, hi Jim, hi Bernd,

I had problems to submit test results into CDX in the last days and couldn't figure out why. So far I did not get any help from the helpdesk either.

Therefore I have a bunch of test results (passing and some not passing the emission standards) that are not submitted yet.

My contract in the US is up and I am moving back to Germany next week so my successor will take care of it.

For all In-Use related / Surveillance topics, please contact my manager Nick Tamborra.

I always enjoyed working with you and wish you happy holidays.

Tobias

Hi,

I tried to submit a IUVP result and it got rejected with a fault that I never saw before.

Can you help me to figure out what went wrong?

Thanks for your help.

Subject: 2016 e-Golf Charging units

Hi Dave;

As we discussed last week I am providing two values for our 2016 e-Golf battery charging time dependent upon the installed charging capability. All the e-Golf SEL Premium models are equipped with the 7.2 kW charging and have a battery charge time of 3.7 hours at 240 volts. The e-Golf SE model comes standard with a 3.6 kW charger and optionally with the 7.2 kW charger. The charge time for the 3.6 kW charging is 7 hours at 240 volts. I tried to add the note below to the Verify label index #086 to reflect the two charge times, however it was not accepted because Verify requires that a Request For Certificate (RFC) or Request to Update CSI (RUC) be submitted before a Fuel Economy Label dataset can be submitted. We (EEO) are not in a position to do that at the present time due to the authorization/assignments of CROMERR signers within the Volkswagen Group. If you can provide the contractor with these notes and include them on the fuel economy guide web site that would be appreciated, and once we work out the CROMERR issue I will update the label index to include these notes:

3.7 hrs at 240 volts (7.2 kW charger)

7.0 hrs at 240 volts (3.6 kW charger)

It will be possible for the fuel economy label to carry the proper battery charging time depending upon the model and/or option code for the 7.2 kW charger for the e-Golf SE models.

If you have any questions, please let me know.

Best regards,

Richard

If you can provide the contractor with these notes and include them on the fuel economy guide web site that would be appreciated, and once we work out the CROMERR issue I will update the label index to include these notes:

3.7 hrs at 240 volts (7.2 kW charger)

7.0 hrs at 240 volts (3.6 kW charger)

It will be possible for the fuel economy label to carry the proper battery charging time depending upon the model and/or option code for the 7.2 kW charger for the e-Golf SE models.

If you have any questions, please let me know.

Best regards,

Hi Bill, hi Jim, hi Bernd,

I had problems to submit test results into CDX in the last days and couldn't figure out why. So far I did not get any help from the helpdesk either.

Therefore I have a bunch of test results (passing and some not passing the emission standards) that are not submitted yet.

My contract in the US is up and I am moving back to Germany next week so my successor will take care of it.

For all In-Use related / Surveillance topics, please contact my manager Nick Tamborra.

I always enjoyed working with you and wish you happy holidays.

Tobias

Cc: Ex. 7 Snyder, Jim
Subject: 2016 e-Golf Charging units
Importance: High

Hi Dave;

As we discussed last week I am providing two values for our 2016 e-Golf battery charging time dependent upon the installed charging capability. All the e-Golf SEL Premium models are equipped with the 7.2 kW charging and have a battery charge time of 3.7 hours at 240 volts. The e-Golf SE model comes standard with a 3.6 kW charger and optionally with the 7.2 kW charger. The charge time for the 3.6 kW charging is 7 hours at 240 volts. I tried to add the note below to the Verify label index #086 to reflect the two charge times, however it was not accepted because Verify requires that a Request For Certificate (RFC) or Request to Update CSI (RUC) be submitted before a Fuel Economy Label dataset can be submitted. We (EEO) are not in a position to do that at the present time due to the authorization/assignments of CROMERR signers within the Volkswagen Group. If you can provide the contractor with these notes and include them on the fuel economy guide web site that would be appreciated, and once we work out the CROMERR issue I will update the label index to include these notes:

3.7 hrs at 240 volts (7.2 kW charger)

7.0 hrs at 240 volts (3.6 kW charger)

It will be possible for the fuel economy label to carry the proper battery charging time depending upon the model and/or option code for the 7.2 kW charger for the e-Golf SE models.

Subject: VW Group - MY2016 Decision Request / Running Changes to add Beetle Dune / Beetle Dune Convertible

Hello Jim,

Today we submitted the following 4 decision requests and related Running changes, for the addition of 2 new carlines and FEDV vehicle configurations, as shown below.

Note, the engines and transmission are as already certified for other models in this testgroup:

Test Group	Vehicle ID	Cfg.	Purpose	Carline
	Engine / Transmission			
GVGAV02.0VPD	WW411-4-0167/16B	0	FEDV	Beetle
Dune	CPRA / SA6			
GVGAV02.0VPD	WW411-4-0167/16B	0	FEDV	Beetle Dune
Convertible	CPRA / SA6			
GVGAV02.0VBD	WW411-4-0168/16B	0	FEDV	Beetle
Dune	CPKA / SA6			
GVGAV02.0VBD	WW411-4-0168/16B	0	FEDV	Beetle Dune
Convertible	CPKA / SA6			

Related running change letters and revised applications have been submitted for both of the above applications.

Please advise of your decision at your earliest convenience. We will request a revised certificate after the holidays, once we still are set up for the new system.

Thanks,

Hi Ex. 7

Thank you for the introduction and contact information.

I am assuming that VW will continue to work with the help desk to resolve the problems with the IUVP data entry problems that Tobias discussed.

I handle IUVP waiver requests and IUVP policy issues, in contrast to the IUVP Help Desk, who are the Verify technical experts for database issues, like problems with data entry. However, I am the first point of contact for data entry problems caused by the "Earliest or Latest Allowed Submission Dates." For the 2014MY, the latest allowed submission date is 1/30/2016, so I'm assuming the problem is being caused by a technical issue that will require guidance from the Help Desk.

Best wishes,

Bill

CLEAN POWER PLAN:

EPA critics throw down gauntlet in legal fight

Robin Bravender, E&E reporter

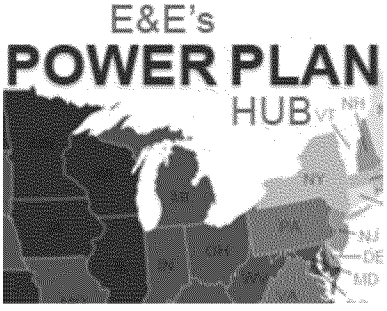
Published: Monday, December 21, 2015

The many foes of U.S. EPA's Clean Power Plan are preparing to attack the Obama administration on a host of legal fronts as the court battle over the embattled rule gets underway.

States, industries and other groups challenging the rule to clamp down on power plants' greenhouse gas emissions laid out their legal strategies in documents sent to a federal appeals court last week.

Among their key accusations: EPA illegally issued duplicative rules for coal-fired power plants; the rule infringes on states' rights; the agency intrudes on federal energy regulators' turf; and EPA doesn't have the authority to force states to transform their energy systems to favor certain sources of electricity.

The themes are familiar.



States and industry groups raised similar concerns when they asked the U.S. Court of Appeals for the District of Columbia Circuit earlier this year to halt EPA's proposed rule. That effort failed, but the same groups -- plus many more -- are now challenging the final Clean Power Plan in the same court. EPA's opponents have asked the judges to halt the rule while the litigation moves forward, and the court is expected to decide early next year whether to block the rule.

In these latest filings, EPA's critics are previewing the arguments they'll make when the judges dig into the merits of the case.

Central to their arguments is the contention that EPA's climate rule illegally regulates power plants under two sections of the Clean Air Act.

The Clean Power Plan regulates existing power plants under Section 111(d) of the clean air law. But two versions of that section were signed into law, one from the Senate and one from the House. Critics of the EPA rule contend that one version bars EPA from issuing standards under 111(d) for sources of pollution already covered by other regulations. A 2011 Obama administration rule regulates power plants under Section 112 of the clean air law, so foes of the climate rules say the 111(d) regulation is unlawful.

That issue was the first one raised in several of the court filings last week, including those submitted by North Dakota, the National Mining Association, the National Rural Electric Cooperative Association, the American Coalition for Clean Coal Electricity and a coalition of 24 states led by West Virginia.

Although EPA's opponents see that argument as a winner, the Obama administration and its allies argue the other version of Section 111(d) -- the one that originated in the Senate -- says only that EPA cannot redundantly regulate a pollutant. That would allow its greenhouse gas rule. They also say the two versions are ambiguous and that the agency deserves deference from the court in interpreting unclear statutory language.

Challengers have a host of other arguments planned, including questioning EPA's authority to regulate "beyond the fence line" of power plants.

Electric utility groups including the Utility Air Regulatory Group and the American Public Power Association plan to attack EPA's authority to "require the curtailment or closure of affected facilities and replacement of their generation by EPA-preferred sources such as wind, solar, geothermal and hydroelectric power, rather than relying on feasible improvements in emissions performance of existing fossil fuel-fired" utilities, according to the list of issues they submitted.

The National Mining Association will question whether EPA "has the authority to force states to transform their energy economies to favor only certain sources of electricity, under the guise of regulating power plants."

Several petitioners, including Murray Energy Corp., plan to argue that EPA's rule intrudes on the Federal Energy Regulatory Commission's authority to regulate the interstate electricity market.

The coalition of states led by West Virginia also raised a number of state-specific legal questions. Among them: Was EPA's treatment of nuclear energy sources in Arkansas illegal? Does the rule unlawfully limit fuel diversity in New Jersey, thereby presenting reliability and cost concerns? Was Texas illegally punished in the area of wind energy under the rule? And did EPA fail to consider the impact of the rule throughout Wyoming on the greater sage grouse and other "sensitive species"?

The conservative group Energy & Environment Legal Institute plans to question whether EPA allowed personnel "with conflicts of interest to draft the rule and failed to recuse decisionmakers with 'unalterably closed minds' from reaching the determination to implement the final rule."

EPA and its supporters in the lawsuit, meanwhile, have long insisted that the rule will withstand the court's scrutiny.

"I fully feel that once we get to the merits of this case, the agency is going to be in good shape," EPA general counsel Avi Garbow said earlier this fall. "We are quite proud of what we've done with the Clean Power Plan, and now the eyes are on the lawyers in many respects to ensure that we can defend it."

NEWSMAKER:

Crusading scientist showed link between ocean's decline, GHGs

Emily Yehle, E&E reporter

Published: Monday, December 21, 2015

It was the summer of 2006, and Italy was on its way to winning soccer's World Cup.

In a small Iceland town, more than 20 ocean experts from nine countries were gathered in a conference room to discuss marine carbon measurements and modeling. The European-heavy group decided to take a break to watch a game.

But Richard Feely stayed behind, huddled over data as his colleagues crowded around the television. It caught no one by surprise: A senior scientist at the National Oceanic and Atmospheric Administration, Feely is known for his intense focus on ocean chemistry.

"He's very dedicated to finding out how the ocean works," said Scott Doney, who was at the Iceland meeting and chairs the Woods Hole Oceanographic Institution's Marine Chemistry and Geochemistry Department. "He needs to know the answer. He thinks it's really important."

Feely's research has brought ocean acidification and its consequences to public attention. Scientists once didn't consider acidification a major threat, and some saw it as a positive: The more carbon dioxide the oceans absorbed, the less stayed in the atmosphere.

But in 2004, Feely and his colleagues laid bare the consequences in two landmark papers published back-to-back in *Science*. The papers brought together chemists and biologists to show not only how much man-

made carbon dioxide was absorbed into the ocean but also how that affected shell-forming organisms.

Chris Sabine, the lead author of one of those papers, said Feely connected the dots between disciplines -- a rare feat. The result got media interest and, eventually, a mandate from Congress to research ocean acidification.

Sabine calls the 68-year-old Feely "the face of ocean acidification."

"It's a combination of being an outstanding scientist, being very concerned about the world and how human activity is impacting it -- and, even more on a personal level, that he is very ... giving and fatherly," Sabine said.

"If the guy were a jerk, nobody would listen him, but he's not. He's a nice guy, and you know he has your best interests at heart," he said.

In discussing the fate of the oceans, Feely can be sobering.

Mankind, he said, is releasing carbon dioxide into the atmosphere -- and thus into the oceans -- far faster than any geological process. That is alarming in the wake of recent research tying Earth's greatest extinction event 252 million years ago to volcanic eruptions that made the oceans more acidic.

Without action, Feely said, we may be on a man-made path to similarly wipe out most marine life. As the ocean absorbs carbon dioxide, it lowers the water's pH and the saturation of calcium carbonate minerals that some species use to build shells.

The first consequences are already happening: Shellfish are dying, corals are disappearing and food webs may be changing.

Yet most of the public remains unaware of the problem.

"I'm worried that the understanding of the significance of that is not large enough to affect the political process," Feely said.

That concern has fueled his career. More than most scientists, Feely has ventured outside the lab, giving lectures that he admits may leave his audience "overwhelmed with the significance of the problem."

In 2008, he spoke at the annual meeting of the Pacific Coast Shellfish Growers Association. At the time, one of the area's largest oyster hatcheries was losing almost all its larvae, baffling industry and state officials.

Feely suggested that acidic waters might be the problem. The year before, he had led the first-ever survey to measure the amount of carbon dioxide along the Pacific Coast. Researchers found that the coast was particularly acidic -- the result of naturally carbon-rich upwellings joining carbon dioxide from man-made emissions.

Feely was right, and the shellfish industry took action, asking Congress to fund a monitoring system along the coast. Sen. Maria Cantwell (D-Wash.) successfully pushed through $500,000 in federal funding; today, seven monitoring stations provide data to farmers and scientists.

Feely and other scientists showed hatcheries how to raise water's pH by adding sodium carbonate. Larvae again made it to adulthood, and now hatcheries have automated systems.

"To me, that's a perfect example of how government is supposed to work," Feely said. "That's what encouraged me. I know we can do it if we get people together to do it."

Cousteau's influence

When Feely began his research into what is now called ocean acidification, few scientists were on the same path.

As a child in Minnesota, Feely loved watching videos of Jacques Cousteau and "fell in love with the idea of being an oceanographer." A love of nature -- and afternoons spent swimming, fishing and hiking -- set him on a path that eventually led to a career that has cracked open the risks of ocean acidification.

Feely began with a bachelor's degree in chemistry at the University of St. Thomas, moving on to Texas A&M University to get his doctorate in oceanography. He first studied the dirt of the ocean, but a professor soon urged him to find something more likely to get him a job. In 1974, he moved to Seattle and began a chemical oceanography program at NOAA.

Soon, Feely began noticing excess carbon during research cruises. In the early 1990s, he helped launch a 10-year global survey of the world's oceans. The project involved 12 labs and almost 100 research cruises. Sabine, who was also a researcher on the project, called it "the most intense geochemical survey that had ever been done."

The project involved the analysis of tens of thousands of seawater samples. The resulting 2004 papers in *Science* kicked off a growing interest and awareness in the scientific community. In the past year alone, scientists have published hundreds of papers on the subject.

Sabine remembers "riding the media wave" in the months after the studies were published. Suddenly, he and Feely were fielding questions from both journalists and lawmakers. They testified in front of Congress and conducted numerous briefings on Capitol Hill.

The eventual result was the Federal Ocean Acidification Research and Monitoring Act, or the FOARAM Act. Passed in 2009, it led to the creation of NOAA's Ocean Acidification Program.

Sabine credited Feely's "strong push and outgoing proactive nature" for the law's passage and NOAA's central role in it.

Today, 11 agencies tackle ocean acidification, setting priorities across the government, and the National Science Foundation has directed about $11 million since 2010 to ocean acidification research.

Jan Newton, a principal oceanographer with the Applied Physics Laboratory of the University of Washington, said one of Feely's strengths is not staying within his niche; he instead reaches out to other scientists, policymakers and stakeholders.

"Dick is one of the premier ocean acidification scientists in the world, and he and Chris Sabine and others have worked so hard to formulate what the nation's response should be," she said. "It's very clear his leadership has made an enormous difference not only to our global understanding but also our national understanding and our local understanding."

Newton has known Feely "as a human" since 1990, although she said she knew of his research while still a graduate student in the 1980s. In 2008, she invited him on a cruise in Puget Sound, where they found that the waters were more acidic than expected.

The resulting study, authored by Feely, Newton and several others, attributed as much as 49 percent of

the pH decrease in the deep waters of the Hood Canal subbasin to ocean acidification. Other factors -- natural and man-made -- amplified that effect, highlighting how estuaries may see changes more rapidly than the open ocean.

Feely's next focus is helping develop new technology to better measure the global distribution of carbon dioxide. In 2012, he helped create the Global Ocean Acidification Observing Network, which aims to use ship surveys, moorings, floats and gliders that provide necessary data from around the world.

A NOAA-funded project, for example, aims to develop surface wave gliders -- instruments that resemble surfboards -- to take continuous measurements. The agency has also deployed moorings that collect carbon dioxide data from surface seawater every few hours, relaying the information back to scientists.

That's a far cry from how Feely started out, painstakingly taking measurements on monthslong research cruises. He has spent more than 1,000 days at sea -- and continues to jump on a ship about once a year.

He still gets seasick. But, he explained, "after the first couple of days, I'm fine."

Father on the high seas

All those days away meant Feely's wife, a recently retired nurse supervisor, was often left alone to not only handle their three kids but also deal with household emergencies -- including, in one instance, a water main break.

"She always said the major life events occur when you're out to sea," Feely joked. But Sabine jokingly attributed Feely's experience as a father to his success on cruises, where he often oversees a few dozen scientists who are in close quarters and working 12-hour shifts.

On board, scientists are either working, eating, exercising or sleeping -- and maybe watching a "shoot 'em up" movie at the end of a shift. In that environment, personalities clash, but Feely "is good at calming a situation," Sabine said.

Sabine started his career under Feely, meeting him in the late 1980s as a graduate student at the University of Hawaii. He later became part of a global carbon survey where Feely was one of the principal investigators; when the 10-year program ended, Feely hired Sabine to join his lab.

Three years ago, Sabine became Feely's boss, taking over as director of NOAA's Pacific Marine Environmental Laboratory. The switch "could have been totally awkward and weird," Sabine said, but the two longtime friends and colleagues made the transition easily.

At sea, Feely similarly navigates the sometimes complex relationships among scientists.

"He really loves what he does, and he's a great scientist. He's just generally a great and kind person," Sabine said. "Everyone kind of looks to him as a father figure."

Newton agreed. At 2 a.m. in the ship's galley, she said, Feely is always up for a chat about science or just "life stuff."

"He really is thinking about other people and how to make things better for the common good," Newton said. "When you're around a person like that, it just makes the experience a lot nicer because there isn't a hidden agenda, there isn't an ego. You're just dealing with a person who wants to get the best science going forward and then have a very enjoyable time."

WHITE HOUSE:

Obama vetoes measures to kill carbon rule, inks spending deal

Amanda Reilly, E&E reporter

Published: Monday, December 21, 2015

As expected, President Obama has vetoed two resolutions aimed at killing U.S. EPA's carbon rules for power plants.

Congress passed the resolutions quashing the central piece of Obama's climate change agenda in the hope of embarrassing the administration during the recent international negotiations in Paris. S.J. Res. 23 targeted EPA's rule to reduce carbon dioxide emissions from new and modified power plants, while S.J. Res. 24 would eliminate the Clean Power Plan.

Obama had previously threatened to veto both resolutions. The president said Friday in a pair of memorandums explaining his vetoes that the regulations were essential to addressing climate change.

"It is past time to act to mitigate climate impacts on American communities," Obama said of the existing power plant rule. "Because the resolution would overturn the Clean Power Plan, which is critical to protecting against climate change and ensuring the health and well-being of our Nation, I cannot support it."

The Obama administration leaned heavily on the power plant rules at the recent international climate negotiations in Paris to demonstrate the United States' commitment to addressing climate change.

At the talks, nations agreed to prevent global temperatures from rising more than 2 degrees Celsius above preindustrial levels and said countries will "pursue efforts" to limit warming to 1.5 degrees. The deal also requires countries to update their emissions reduction pledges by 2020 and every five years afterward.

Along with vetoing the resolutions Friday, Obama signed into law the omnibus fiscal 2016 spending bill to fund the government through September 2016. The legislation represents a victory for the president's climate change agenda, as congressional Republicans dropped policy riders aimed at killing or weakening the Clean Power Plan.

The spending agreement also allows Obama to make good on his word to provide money for the Green Climate Fund, a U.N.-launched fund to provide developing countries with money to curb their greenhouse gas emissions and address the effects of warming (*Greenwire*, Dec. 16).

House Republicans critical of the administration's climate agenda on Friday introduced a sense-of-Congress resolution in opposition to the Paris deal. Rep. David McKinley (R-W.Va.) introduced the resolution with Republican Reps. Keith Rothfus of Pennsylvania, Morgan Griffith of Virginia and Andy Barr of Kentucky.

In a statement, McKinley criticized the Obama administration for "deliberately" shaping the Paris climate deal to circumvent Congress. He further called the Paris deal "window dressing" and a "feel-good exercise" that would have little impact.

"While the aftermath of the agreement has been full of self-congratulatory applause and high-minded rhetoric about saving the planet, the real impact of the agreement is questionable," McKinley said. "It

appears to be more about President Obama's desire to embellish his legacy than making a tangible difference in global temperatures."

At his year-end press conference Friday, Obama expressed optimism that the climate deal would survive the presidential election next year, regardless of whether a Democrat or Republican enters the White House.

"Do I think there's going to be a lot of noise and campaigning next year about how we're going to stop Paris in its tracks? There will probably be a lot of noise like that," Obama said Friday. "Do I actually think that two years from now, three years from now, even Republican members of Congress are going to look at it and say that's a smart thing to do? I don't think they will" (*E&ENews PM*, Dec. 18).

FEDERAL WORKFORCE:

Obama approves 1.3% pay raise

Kevin Bogardus, E&E reporter

Published: Monday, December 21, 2015

President Obama has signed off on an average 1.3 percent pay raise for federal employees next year.

On Friday, the president issued an executive order that would have much of the government workforce see a bump in salary for 2016. The Office of Personnel Management offered more details in a separate memorandum, also released Friday. The raise will take effect on the first applicable pay period after Jan. 1, 2016.

Some federal employees may even see more money next year. The Obama administration has also created new locality zones that should raise pay for federal employees living in higher-cost areas (*Greenwire*, Oct. 28).

Obama's pay raise for federal employees is in line with his budget proposal earlier this year. It's also an increase from past pay bumps, which had been at 1 percent the last two years after a three-year pay freeze for the federal workforce (*Greenwire*, Dec. 22, 2014).

Democrats and federal worker unions had campaigned earlier this year for a higher raise for government employees, throwing their support behind legislation that would approve a 3.8 percent pay raise. Nevertheless, J. David Cox, the president of the American Federation of Government Employees, told reporters last week that the future looks "a little brighter" for federal employees thanks in part to the higher pay raise signed off by Obama.

"We have gone from three years of a pay freeze to two years of 1 percent. Thank God we're at least 1 plus the locality, about 1.3 or something a little higher in some areas," Cox said. "They left our pensions alone. They left our health insurance alone. So the future does seem to look a little brighter than we were seeing at that point" (*E&ENews PM*, Dec. 16).

WHITE HOUSE:

Inhofe says response from CEQ 'falls far short'

Kevin Bogardus, E&E reporter

Published: Monday, December 21, 2015

Sen. James Inhofe (R-Okla.) is not happy with the White House Council on Environmental Quality.

In a letter sent Friday to Christy Goldfuss, CEQ's managing director, the Senate Environment and Public Works Committee chairman said the council had not resolved his questions nor provided any documents that were requested by the panel.

"As former Chairman [Barbara] Boxer articulated, and former CEQ Chairman [Nancy] Sutley committed, there is an expectation that CEQ officials will cooperate with the EPW Committee's oversight and provide witnesses and documents as requested," Inhofe said in the letter. "Your response falls far short of Ms. Sutley's commitment and my expectation now as Chairman of the EPW Committee."

Inhofe said it was "troubling" that CEQ wouldn't provide "basic information" about its work to his panel.

The committee chairman also said CEQ may not be operating within the law because it does not have a Senate-confirmed official running the council.

"The Obama Administration's attempt to have CEQ managed and overseen on an indefinite basis by a lower-level official who has not been subject to the advice and consent of the Senate is contrary to CEQ's legal authorities and the Vacancies Reform Act and falls far short of the President's constitutional duty to ensure the laws of the United States are faithfully executed," Inhofe said in his letter.

Last month, Inhofe questioned CEQ's legal authority to operate without a chairman approved by the Senate in a letter to President Obama. In a separate letter to Goldfuss, the senator asked for several documents, including operations manuals and legal memorandums (*E&ENews PM*, Nov. 20).

Goldfuss offered a brief response to Inhofe's request, saying the council had "appropriate authority" to operate.

"After Nancy Sutley, the former CEQ chair, resigned in February 2014, senior CEQ officials had appropriate authority to operate," Goldfuss said. "All documents referenced in your letter have been properly issued on behalf of, or in coordination with, CEQ."

The Obama administration hasn't named a nominee to take over CEQ since Sutley's resignation.

PEOPLE:

Prince of Monaco awarded for environmental, climate work

Published: Monday, December 21, 2015

Despite his country's reputation for excess and opulence, Prince Albert II of Monaco has become an outspoken activist for the environment, electric cars and addressing climate change.

The 57-year-old royal's advocacy for biodiversity and climate change research garnered him a U.N. Correspondents Association award, placing him alongside previous winners like former President Clinton and Sir Richard Branson.

Shortly after taking over as prince following the death of his father, the prince's first act was to ratify the

Kyoto Protocol. Since its founding in 2006, the Prince Albert II of Monaco Foundation has awarded nearly $40 million in grants for research into ocean acidification, overfishing and other science.

While it has no heavy industry, Monaco put forward one of the most ambitious greenhouse gas emissions reduction targets -- a 50 percent reduction by 2030 and carbon neutrality by 2050 -- at the recent Paris climate summit.

"It would have been preferable, of course, to start the process many years earlier, and a lot of question marks remain on how nations will ratify it, adhere to it and report their carbon reduction," he said. "But this is a remarkable ray of hope for our planet."

To meet the goal, even the principality's luxurious resorts must adhere to environmental rules about converting garbage into energy, recycling wastewater and sustainable architecture.

The monarch in a country renowned for its auto racing, Prince Albert is also a champion of electric cars, and last year, the country held its first ever FIA Formula E race, part of an international series of races for electric cars. Dubbed "the plugged-in prince," he drives a Tesla, and his palace runs on a fleet of Priuses (Hampton Sides, *New York Times*, Dec. 18). **-- DTB**

KEYSTONE XL:

S.D. regulators mull pipeline's fate

Manuel Quiñones, E&E reporter

Published: Monday, December 21, 2015

TransCanada Corp.'s Keystone XL oil pipeline from Canada is back on the South Dakota Public Utilities Commission's agenda tomorrow, more than a month after President Obama said the project was not in the nation's interest.

Commissioners have for months been reviewing whether to renew an existing permit for KXL to cross the state. It lapsed because of construction delays.

A list of environmental groups and Indian tribes last month asked the PUC to scrap the process following the president's denying KXL permission to cross the international border. Federal approval is among conditions for building the pipeline through South Dakota.

The groups wrote in November, "With the denial of the Presidential Permit, TransCanada is unable to comply with these key conditions imposed by the Commission in the 2010 Permit in that it cannot obtain the Presidential Permit for which it applied and it cannot comply with all applicable laws and rules."

An attorney for the PUC, however, said the company could continue seeking presidential approval. "The Commission simply ordered that construction may not being until a Presidential Permit is obtained," wrote Kristen Edwards this month. "With that in mind, no harm can come from denying the request to revoke the permit at this time."

In Nebraska, TransCanada last month decided to back away from obtaining a permit through the state's Public Service Commission (*Greenwire*, Nov. 18). The company had for years been moving forward under a governor-issued approval before deciding to change course and turn to the PSC.

"We believe it is inappropriate to ask the commission to continue to move forward on a process that has

legally set time lines, while we continue to consider our next course of action," said the company in a statement explaining the Nebraska move.

NUCLEAR POWER:

Calif. plans environmental review of Diablo Canyon

Published: Monday, December 21, 2015

California is planning a comprehensive environmental review of the state's last operating nuclear power plant.

Pacific Gas and Electric Co. is looking to extend its leases for the Diablo Canyon power plant's two structures in San Luis Obispo County. They're set to expire in 2018 and 2019.

Lt. Gov. Gavin Newsom (D) directed the State Lands Commission on Friday to review the coastal plant, arguing it should be fully subject to the California Environmental Quality Act. The plant did not undergo such a review when it opened in 1985.

"On the one hand we have Fukushima etched in our memories, and on the other hand we are tackling fossil-fuel-driven climate change," Newsom said. "This is incredibly complex and of no surprise that decisions have been avoided."

PG&E said it does not believe that issuing a new lease involves the CEQA in any way.

"Diablo Canyon power plant is a safe, clean, reliable and vital energy resource for PG&E's customers and a significant economic engine for the Central Coast," spokeswoman Blair Jones said Friday.

PG&E has faced stiff local opposition to Diablo Canyon's continued operation, with many activists citing the plant's proximity to the ocean and several fault lines (*Greenwire*, July 10; Rory Carroll, Reuters, Dec. 18). **-- BTP**

BIOFUELS:

Algae oil makers turn to kitchens as vehicle demand dries up

Published: Monday, December 21, 2015

Cheap oil and regulatory red tape are forcing many biofuel manufacturers to try new market areas.

Solazyme Inc. was founded to make algae-based car and truck fuel, but its newest product is an algae-based cooking oil. Other biofuel firms are moving to sell anti-aging lotions, algae ice cream, household cleaners and perfumes.

"Take a lack of forward progress and long-term energy policy in Washington and add $40-a-barrel oil to that, and the result is that with great effort we're just breaking even in specialized areas of fuels," Solazyme CEO Jonathan Wolfson said. "We still believe in the long-term potential for fuel, but it's just really hard right there right now" (Amy Harder, *Wall Street Journal*, Dec. 20). **-- BTP**

CYBERSECURITY:

U.S. power grid, dams vulnerable to hackers

Published: Monday, December 21, 2015

Iranian hackers have demonstrated the ability to get into and possibly sabotage the American power grid and other infrastructure such as dams and factories.

While tracking hackers who had taken housing files from the University of California, security researcher Brian Wallace uncovered passwords and diagrams related to dozens of U.S. power plants, according to an Associated Press investigation.

"If the geopolitical situation changes and Iran wants to target these facilities, if they have this kind of information, it will make it a lot easier," said Robert Lee, a former U.S. Air Force cyber warfare officer. "It will also help them stay quiet and stealthy inside" (Jonathan Fahey, AP/*Oklahoman*, Dec. 21).

For example, a small dam near New York City was hacked into from Iran in 2013, prompting worries up to the White House as Americans operate with more and more connectivity among their devices, vehicles and even infrastructure.

"Everything is being integrated, which is great, but it's not very secure," said Cesar Cerrudo, chief technology officer at IOActive Labs, a security consulting firm. The United States has more than 57,000 industrial control systems linked to the Internet, from air-conditioning units to large pipelines. This is more than any other country, according to researchers at the search engine Shodan.

It's more than a hypothetical threat. Last year, hackers took over the control system of a German steel plant and caused "massive" damage to a blast furnace, according to the German government.

The head of the National Security Agency revealed last year that hackers from Iran and other countries had reached the technical capability to take down U.S. power grids and other infrastructure (*EnergyWire*, Nov. 21, 2014).

Security officials were thus very concerned after obtaining intelligence about hackers getting into the controls of the U.S. dam. Though the attack was eventually traced to the very small and inconsequential Bowman Avenue Dam in Rye, N.Y., the White House and other federal officials took the threat seriously (Danny Yadron, *Wall Street Journal*, Dec. 20). **-- BTP**

ELECTRICITY:

Regulators struggle to control pot growers' energy use, emissions

Published: Monday, December 21, 2015

Marijuana-growing facilities are responsible for greenhouse gas emissions equivalent to that of every car, home and business in New Hampshire.

The exploding energy usage from the industry, which is legal for either recreational or medicinal use in 23 states, comes amid no regulations on whether growers have to use energy efficiently as they meet the demand for the drug. Customers who want to prevent the impacts of climate change may also not realize that their marijuana use contributes to significant levels of carbon emissions.

Regulators are still trying to figure out how to manage the growth.

"We are at the edge of this," Pennsylvania Public Utility Commissioner Pam Witmer said. "We are looking all across the country for examples and best practices" (Jennifer Oldham, Bloomberg, Dec. 21). **-- SP**

TRANSPORTATION:

Leaders look toward transformative technology in 2016

Ariel Wittenberg, E&E reporter

Published: Monday, December 21, 2015

Federal transportation officials are preparing for what they say will be a transformative year for the industry shaped by technological advances in everything from autonomous vehicles to energy storage.

Speaking to reporters Friday, Transportation Secretary Anthony Foxx said he will focus 2016 on making the Department of Transportation more agile to respond to these advances, saying the agency must be "a lot fleeter afoot" to keep up.

"Technology is emerging, and it hasn't settled down yet. It's like where mobile phones were 30 years ago -- you were surprised when someone had them, but now you're not," Foxx said. "I don't have an expectation that we will have final answers [in 2016] that are settled for the next 50 years, but I do have an expectation that our department, over the next year, is going to do a serious laying of foundation."

Part of that foundation is writing regulations for things like autonomous vehicles and "vehicle-to-vehicle technology," in which cars communicate in order to avoid accidents. Draft rules for both are expected in early 2016.

But Foxx -- who has marveled that "even George Jetson had to hold the steering wheel" -- said he hopes the department will be more visionary, helping communities to integrate those new technologies with things like zero-emissions vehicles, which are already on the market and growing in popularity as related infrastructure expands.

"I'll be talking a lot next year about technology and transportation and how we capture this moment, where this sector is dealing with a crush of opportunity and how we harness it and make it work for America," he said.

Robert Puentes, director of the Metropolitan Infrastructure Initiative at the Brookings Institution, said that while the transportation sector could be at a critical inflection point, it is incumbent on federal and local governments to think deliberately about how to leverage it.

He noted that not all advances in transportation have had a transformative effect. E-ZPass and other electronic toll payment methods, for example, "updated" highways and turnpikes across the country but did not "revolutionize" them the way that smart and electric vehicles could, Puentes said.

"It's a question of do we want a transportation future that is more high-tech but looks like how it looks today, or looks like something vastly different?" he said.

Puentes said DOT, as well as states and communities, should be thinking about how transportation can serve other policy goals like reducing greenhouse gas emissions or decreasing socio-economic inequity and then decide which technological advances are best-positioned to help those initiatives.

"The problem with transportation is that in the past century, transportation has only been about transportation," he said. "The idea is to take it out of the box and put it where it should be, which is in service of other goals."

Smart Cities

DOT's recently launched Smart Cities competition is one way to do that, experts say. In that contest, municipalities submit plans for how they would ease traffic and reduce greenhouse gases by integrating intelligent transportation systems, connected vehicles and automated vehicles as a means of strengthening transportation infrastructure. The winner will receive a $50 million grant to implement its plan (*Greenwire*, Dec. 8).

Vulcan Inc., the philanthropic organization of Microsoft co-founder Paul Allen, is supplying $10 million of the grant money and will help five finalist cities connect with consultants on how to do everything from installing electric vehicle charging to securing the troves of data that come with insuring smart transportation technology.

Speaking at a forum for contestants last week, DOT Deputy Assistant Secretary for Research and Technology Mark Dowd said the winning city is meant to provide a "playbook" for other cities.

"This is a different approach than the government usually takes," he said. "Usually, we spread the peanut butter as thin as possible so everybody gets some, but this time we decided to spend it all in one city that would get a lot of money so we can show the country what is possible."

Spencer Reeder, senior program officer for climate and energy at Vulcan, said his organization got involved in the project in order to help cities limit their vehicle-generated greenhouse gas emissions.

While electric vehicles are one obvious way to reduce them, Reeder noted that other technologies like smart streetlights that help ease congestion could go a long way toward improving air quality.

Reeder said Vulcan views its $10 million grant as "seed money," an investment whose returns will be reaped when cities other than the initial winner decide to make similar advances.

"Right now, people have a sense that something is actually changing in the transportation sector, but there are still big barriers that are limiting adoption," Reeder said, noting that when it comes to electric vehicles, for example, consumers are worried there are not enough charging stations. "Rather than chip away at those problems with incremental programs or grants, we were interested in doing something much bolder, much more ambitious. It's only through actual implementation and deployment of that holistic approach that other cities will gain the confidence to follow suit."

Stephen Ezell, vice president of global innovation policy at the Information Technology and Innovation Foundation, has advocated for more federal investment in smart transportation infrastructure. In May, he co-authored a report called "From Concrete to Chips," which found that investments in information technology systems for the transportation sector reap nine times the benefits investments in traditional infrastructure like bridges and new highway lanes do.

"Whether it's driverless cars or ridesharing or applications to help drivers avoid traffic and find parking, there is this whole new suite of technology that can be used to benefit society and increase quality of life," he said.

Ezell noted that South Korea had a similar initiative to build the smart city of Songdo from scratch and that other cities are now hoping to emulate that effort by adopting the same technologies.

"As a proof-of-concept test, it shows the maturity and the potential of these technologies," he said. "Many of these technologies are not on the precipice. They are ready. They are mature. The question is just how we are going to deploy them so they can start having real, quantifiable impacts on society."

EPA:

Agency revamping its information technology

Kevin Bogardus, E&E reporter

Published: Monday, December 21, 2015

U.S. EPA is reorganizing its information technology office.

Ann Dunkin, the agency's chief information officer, said EPA realized it needed to update her office soon after her arrival at the agency last year.

"Very shortly after I arrived, we had the first serious conversation about it, and it was quite apparent to me that we needed to change when we started talking about it," Dunkin said in an interview last week with Federal News Radio.

"Currently, we have offices ostensibly focused on collecting data and disseminating data, but those initial concepts which don't really work well today had gotten muddied over time, and offices were very mixed-up and the work load is very uneven between the various offices between the breadth of the work across the various offices."

Dunkin put together a "reorganization team" composed of agency staff from EPA's Washington, D.C., and Raleigh, N.C., offices. That team met with current and former employees, including past chief information officers for the agency, as well as those in the private sector, to discuss how to best rework EPA's digital presence.

Changes are now afoot at the agency, with Dunkin helping to create the new Office of Digital Service and Technical Architecture. In addition, she is setting up an Office of Customer Advocacy, Policy and Portfolio Management, as well as an Office of Enterprise Information Programs.

Those new offices and some other reworked programs under Dunkin's supervision should help streamline many of EPA's services online, making it easier for the agency to manage it for the public to use.

The reorganization has required some staff to shift positions, Dunkin said, and they may need new training. In addition, EPA will have to fill some jobs.

"We are going to have a combination of things going on: vacancies where we have identified high-level needs and we fill those jobs," Dunkin said. "We will have people who are changing jobs, and there is some cross-training that goes on between the previous person and the new person where they bring them up to speed on their work. And I'm sure there will be some folks where there is a real need for specific training and skill set, and we are more than happy to do that."

Dunkin, a former Hewlett-Packard Co. engineer and manager, has also been working to bolster EPA's cybersecurity in the wake of this year's massive data breach that compromised personal information for millions of federal employees (*Greenwire*, July 16).

She has been nominated by President Obama for assistant administrator of the Office of Environmental

Information at EPA. Her nomination, however, has not moved in the Senate yet (*Greenwire*, Dec. 18).

EPA:

Steel mill sets stage for narrow standard for civil rights complaints

Published: Monday, December 21, 2015

A complaint to U.S. EPA's Office of Civil Rights by Flint, Mich., residents in 1997 paved the way for what critics say is the office's high bar for civil rights determinations.

Residents filed a complaint to EPA when Select Steel applied for an air permit with the Michigan Department of Environmental Quality seeking to build a steel mill in the city. The mill would emit up to 100 tons of lead per year as well as other pollutants. State regulators approved the permit in 1998.

Though the mill was never built, EPA ruled against the complainants in the first formal decision it made on an alleged violation of Title VI of the Civil Rights Act of 1964.

EPA determined that adding a new pollution source to a community is not in itself a discriminatory impact. Rather, EPA must determine through data that emission levels will rise above legal limits the agency has developed to determine whether the project will harm the environment and human health.

"All federal agencies, including the EPA, must determine whether there is sufficient harm for a disparate impact complaint to be actionable," EPA said in a statement.

Environmental advocates say it's not that simple.

"Health-based standards have nothing to do with civil rights," said Marianne Engelman Lado, a senior attorney at Earthjustice. "The act of spewing the mercury is a disproportionate effect -- that's bad enough. It doesn't have to be peer-reviewed bad. It just has to be a bad effect" (Buford/Lombardi, Center for Public Integrity, Dec. 18). **-- SP**

NEVADA:

Lawmakers finalize $1B deal to lure Faraday to state

Published: Monday, December 21, 2015

Gov. Brian Sandoval (R) of Nevada signed four bills into law Saturday, finalizing a deal to bring a $1 billion electric car manufacturing plant to North Las Vegas.

Sandoval signed the documents after the Nevada Assembly approved three Senate bills that included tax abatements, tax credits, water and infrastructure at its vacant industrial park site.

Faraday Future, with financial backing from Chinese billionaire Jia Yueting, has laid out a plan to construct a 3-million-square-foot factory that it intends to begin producing electric vehicles by 2017.

During a trade mission to China, Sandoval met with Jia and said he was impressed with Faraday's vision.

"I honestly believe that it is going to change the trajectory and economy in southern Nevada and the state," he said. "This is one of those days we've done a good thing."

To entice the company to build its plant in Nevada, lawmakers approved $215 million in tax abatements and tax credits that will be available when certain benchmarks are met. Over 10 years, tax credits are said to total $38 million and abatements to total $176 million.

Faraday released a statement saying it was "very excited" by the news (Chereb/Whaley, Las Vegas *Review-Journal*, Dec. 20). **-- AK**

NEGOTIATIONS:

C2ES's Perciasepe says U.S. to pay diplomatic price if next administration rejects Paris deal

Published: Monday, December 21, 2015

Following a major turning point in the global discussion on climate change at the Conference of the Parties meeting earlier this month, what role will the private sector and state and local governments play in helping the United States meet its commitments? During today's OnPoint, Bob Perciasepe, president of the Center for Climate and Energy Solutions and the former deputy administrator of U.S. EPA, discusses the next steps for the deal, including Clean Power Plan implementation. He also talks about how a potential party shift in the White House could affect the deal's future.

Click here to watch today's OnPoint.

POWER PLAN HUB:

So it's come to this -- a Clean Power Plan haiku

Emily Holden and Rod Kuckro, E&E reporters

Published: December 21, 2015

In Minneapolis last Thursday, the Center for Energy and Environment offered cocktails and haiku readings by Minnesota Pollution Control Agency Assistant Commissioner David Thornton as primer to a discussion about the role of early-action credits and efficiency programs in meeting the requirements of U.S. EPA's Clean Power Plan.

Minnesota regulators have said the state should be able to meet its obligations under either a mass- or rate-based regulatory approach, thanks to a diversified generation portfolio and strong state energy efficiency and conservation targets. MPCA is still collecting stakeholder input and refining comments to be submitted to EPA in late January. "We think that it's a fair plan," Thornton said.

POWER PLAYS

Each Monday, **Power Plays** previews upcoming moves on the way to Clean Power Plan compliance and recaps the week's developments.

E&E reporter Daniel Cusick attended the event. Other participants in the CEE session included national experts Rodney Sobin of the National Association of State Energy Officials; Sara Hayes of the American Council for an Energy Efficient Economy; and Chris James and Ken Colburn, principals of the Regulatory Assistance Project.

The experts wrapped up a series of meetings with Minnesota regulators, utility officials and other stakeholders Friday. Sobin noted that Minnesota "is pretty well-situated" to regulate power-sector carbon dioxide because its agencies have a history of working with utilities to track emissions and other environmental metrics, Cusick reports.

Here are Thornton's haikus, with writing credit to Anna Henderson of the Minnesota Environmental Quality Board: "Mass or rate-based plan/Want to change and stay the same/Ask the stakeholders." "Fear for the future/Sunk capital investments/Act now or later."

The Michigan Agency for Energy and the state's Department of Environmental Quality will announce Clean Power Plan modeling results tomorrow. The data will show "what Michigan needs to do and by when" to comply with the rule, according to a press release. E&E's Jeffrey Tomich will report on the modeling.

Dec. 31 is the deadline for stakeholders to submit comments to West Virginia's Department of Environmental Protection for a CPP feasibility study it will develop for the state Legislature. That study is due April 20.

The next state meetings aimed at guiding the development of compliance options kick off the first week of January.

The Arizona Department of Environmental Quality on Jan. 5 will take comments on the proposed federal implementation plan and review a menu of potential compliance options. The DEQ will also develop a work plan on outreach to "vulnerable communities."

In Georgia on Jan. 7, the Environmental Protection Division will hold a meeting on EPA's program to provide incentives for early adoption of selected renewable energy measures and for energy efficiency measures for the low-income population. One panel will explore wind and solar projects while a second will look at low-income efficiency programs.

For those state agencies that have developed websites devoted to their Clean Power Plan process, we've started adding links to our state profile pages. Look for them in the left-hand column under "State Resources." See a state agency page missing? Please email us at powerplanhub@eenews.net.

In case you missed it:

- The North Carolina Environmental Management Commission will hold a special hearing in February to vote on its response to EPA's Clean Power Plan, a response that is widely expected to expand the governor's legal challenge to the Obama administration's climate initiative (*EnergyWire*, Dec. 18).

- Arkansas hasn't settled on a potential path for complying with the Clean Power Plan, but the state is seeing interest in a mass-based approach both in its jurisdiction and elsewhere in the midcontinent (*EnergyWire*, Dec. 17).

- The cost impact of the Clean Power Plan in the Midcontinent Independent System Operator's 15-state footprint ranges from a few billion dollars to more than $100 billion over the next two decades, according to an initial analysis by the grid operator (*EnergyWire*, Dec. 17).

- Virginia's second meeting on the Clean Power Plan ended without consensus last week on some of the most basic compliance decisions the state must make (*ClimateWire*, Dec. 16).

- The Wyoming Legislature will hold off on considering bills that would affect the state's Clean Power Plan compliance strategy when it convenes in February, clearing the way for the state to submit an initial plan to EPA in September (*ClimateWire*, Dec. 16).

- Florida's largest electric utility wants the Sunshine State to comply with the Clean Power Plan by requiring power plants to reach an average rate of emissions (*EnergyWire*, Dec. 16).

Once you know when it will be delivered, please let Ex. 6 and I know so that we can insure our staff is ready to receive it.

My cell number is listed below as well.

If you have not done so, please also provide the EPA and Jacobs the wheel alignment specifications for this vehicle.

I do have a plate that we can use for the vehicle mileage accumulation and transport.

Please provide an insurance certificate for the vehicle as well.

Subject: WLTP IWG No. 13 - documents

Dear members of WLTP IWG,

I hope you all have wonderful and relaxing Season holidays.

Nevertheless, please note that documents for the next IWG meeting have been uploaded:

https://www2.unece.org/wiki/display/trans/WLTP+13th+session

Best regards

Stephan Redmann

Subject: VW Group - 2017 Application for test group HVGAJ02.0AAC

Hello Jim,

We have uploaded the application to Verify for the 2017 test group HVGAJ02.0AAC, Audi A4 and A6 models with 2.0l TFSI gasoline engine. This is a carryover from 2016 with the addition of an evaporative family and Audi A4 models for 2017. The A4 quattro fuel economy vehicle in this test group has been scheduled for confirmatory testing at the EPA in January.

We are still in the process of establishing CROMERR signers so a Certification Request will be forthcoming as soon as possible. In the meantime, we would appreciate your review of the application so we can resolve any questions you may have promptly in light of the short lead time we have to the planned launch date of January 30th.

Regards,

Ex. 7
